EXTRACT

From an Act prescribing Rules for the Government of the State Library, passed March 8th, 1861.

SECTION 11. The Librarian shall cause to be kept a register of all books issued and returned; and all books taken by the members of the Legislature, or its officers, shall be returned at the close of the session. If any person injure or fail to return any book taken from the Library, he shall forfeit and pay to the Librarian, for the benefit of the Library, three times the value thereof; and before the Controller shall issue his warrant in favor of any member or officer of the Legislature, or of this State, for his per diem, allowance, or salary, he shall be satisfied that such member or officer has returned all books taken out of the Library by him, and has settled all accounts for injuring such books or otherwise.

SEC. 15. Books may be taken from the Library by the members of the Legislature and its officers during the session of the same, and at any time by the Governor and the officers of the Executive Department of this State who are required to keep their offices at the seat of government, the Justices of the Supreme Court, the Attorney-General, and the Trustees of the Library.

Mining and Scientific Press.

A Journal of Useful Arts, Science, and Mining and Mechanical Progress.

DEWEY & CO., PUBLISHERS And Patent Solicitors.

SAN FRANCISCO, SATURDAY, JULY 8, 1865.

VOLUME XI. Number 1.

TABLE OF CONTENTS.

Volume Eleven.
The Problem of Gold and Silver Extraction—No. 13
A Trip to San Jose and Santa Clara
Mining Operations in Lower California.
Cotton and Its Manufacture in California.
Cotton Manufacture in England.
Oil Wells and Oil Well Boring at the East.
Mechanical—Our Foundries; Improvement in Iron Smelting; The Bessemer Patent in the United States; Improvement in Carriage Making; Brick Making; A New Breach Loading Musket, etc.
Another Glass Factory.
Scientific Expedition.
The Deepest Gold Mine.
Grass Valley Directory.
The Mexican Emkbration Scheme.
Land Sibles on Lake Erie.
All Quiet South of the Potomac.
Earthquake in Missouri.
A Novel Idea.
A Bottomless Lake.
Mining Summary.
Editorial and Selected.
Mining Shareholders' Directory.
Stock Sales and Reports.
San Francisco Prices Current
New Mining and Other Advertisements, Etc.

New Volume

—OF THE—

Mining and Scientific Press

Issued every Saturday. Each number contains 16 pages and 64 columns (size of Harper's Weekly).

PUBLISHED BY

DEWEY & CO.,

Patent Agents, Publishers and Job Printers, 505 Clay Street, San Francisco.

THE ELEVENTH VOLUME

Of the Mining and Scientific Press commences under advantages most gratifying to its publishers, who assert, with pleasure, that a continued improvement in this journal may be anticipated by its numerous and rapidly increasing readers.

We shall continue to devote a large space in our columns to the various and best methods of treating ores and saving gold and other precious metals in every form, furnishing valuable hints to millmen, prospectors, oil-workers and miners generally, not to be found in any other publication.

New machinery, latest inventions and discoveries, and all matters pertaining to the mechanical, manufacturing and industrial resources of the Pacific States, will receive careful attention.

Stock market reports will be published as received from the official records. Our carefully compiled "Mining Shareholders' Directory" will prove a faithful monitor to parties holding stock, and a desirable record for reference to brokers.

Friends pleased with our efforts in the publication of the Press can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and News-dealers, acting as our agents, will receive liberal commissions.

☞Bound Volumes For Sale.☜

SUBSCRIPTION IN ADVANCE.

One Year, (two volumes)..... $5.00
Six Months, (one volume)..... 3.00

FOR ADVERTISING

Our terms are very reasonable. Mining Companies are especially favored by our rates, and careful attention is given to the legal publication of Mining Notices.

Office—No. 505 Clay street, corner of Sansome.

DEWEY & CO., Publishers.

The Fourth in Washoe.—The denizens of Virginia City made extensive preparations for a big bonfire on the top of Mount Davidson on the evening of the Fourth. Some thirty gallons of tar, two or three tar barrels and a lot of wood were hauled up to the summit on Monday; also a flag-staff sixty-two feet in length. The task of getting them up there must have been up-hill work; but the splendid appearance of the national emblem, lit up by the bonfire at that sightly point, must have been ample remuneration for the trouble.

Our Rivers.—It is stated that the Yuba and Feather rivers are fast settling down to low water mark.

ANOTHER GLASS FACTORY.

We believe it is known to but few of our citizens that we have in full operation in this city, a second glass factory, only recently established, yet apparently doing a very good business, and in a fair way of becoming not only a permanent but a paying institution. On the rear portion of the open lot on the southeast corner of Third and Townsend streets, may be seen a wooden building, with very little pretention to architectural merit, from the central portion of whose roof springs a tall iron smoke-stack or chimney. This unpretentious building has recently been converted into a glass factory by Messrs. Newman & Brannan, which will hereafter be known as the "San Francisco Glass Works." It started blowing on the 22d of May last, with a five-pot furnace. Its proprietors are thoroughly skilled in their business, and have commenced operations in a small, quiet manner, with the intention of gradually increasing their facilities for work as circumstances may seem to require. One of the partners is from Pittsburg, Penasylvania, which is the chief point of glass manufacture in America; the other was educated to his business at the New England Glass Works, in Cambridge, Mass. Their head workman is also from Cambridge, and is one of the best glass-blowers in the country.

Nothing but white ware is turned out at this establishment, and the quality of the articles submitted to our inspection will compare favorably with any thing of the kind from the East. At the time of our visit they were at work upon prescription bottles and lamp chimneys. Their speciality of manufacture will be druggists' and chemists' ware, philosophical instruments, lamp chimneys, etc. Particular attention will be paid to private moulds. Orders for any kind or quantity of goods will be taken on the premises, and the goods manufactured and delivered at the shortest notice. Druggists and others will do well to give them a call, and, by favoring home productions, aid in building up this new branch of enterprise in our midst. The pots of this furnace are so set as to be closed from the direct action of the heat, and open only to the operator from the outside. By this arrangement the metal is kept free from the dust and dirt of the furnace, and consequently the work turned out is much clearer and more free from impurities.

Rain.—The Virginia City papers chronicle the occurrence of a regular rain storm in that vicinity on the afternoon of the 3d instant. The fall was so abundant that streams of water ran down the streets. It will be recollected that the weather in this city on that day was such as in any other locality would indicate immediate and heavy rains. As it was, we got a few scattering drops, but the air was sufficiently filled with moisture to form one of the most magnificent rainbows ever seen in San Francisco.

Fluxes.—The number which we give to-day on the "Problem of Gold and Silver Extraction" is devoted to a brief discussion of the theory and philosophy of fluxes and fluxing. It will be found very interesting and instructive to all interested in metallurgical operations.

MINING OPERATIONS IN LOWER CALIFORNIA.

We had the pleasure of a call last week from Mr. Henry S. Brooks, general business agent of the Triunfo Mining Co., located in the San Antonio district, Lower California. From him we learn that mining operations in that district continue very much as heretofore; the political troubles and interruptions of business on the Eastern side of the gulf have not and probably will not reach the Peninsula. The governor of Lower California having neither men nor means to take any active part in the disturbances which are now distracting the nation, will continue to remain quietly at his post, and recognize any central power which may reach, with its agents, his distant and isolated province.

The Triunfo and the Maria are the only mines in the district which work their own ores; all the other mines are shipping. The Trifuno Company owns its own mill; the Maria, an adjoining claim, rents the Pichaco mill. Mr. Brooks emphatically condemns the working of mines in that district merely for obtaining ore for shipment. His reasons are stated in substance as follows: first no ore paying under $150 to the ton will pay for shipping. To obtain a ton of 1st class, or shipping ore, it is necessary to raise and sort ten tons. The expenses of shipment and reduction in Europe cannot fall short of $50 per ton, leaving $100 for interest on investment and cost of mining and raising ten tons of mineral. The shipper gets an advance of about $60 per ton for his ores. In this operation the company throws aside nine tons of ore, worth about $40 to the ton—$360. This ore can be worked on the ground at an expense of $20 per ton, or $180 for the lot, which would leave a net profit of $180. This amount is therefore thrown away to realize less than $100 from the single ton of selected ore. Suppose the ore is all worked as it comes from the mine, we have—10 tons of ore worth $51 per ton=$510; cost of working, $20 per ton = $200, net profit, above cost of working, $310; or $210 more than can be realized from the shipping policy. These figures are based upon six months of actual working at the rate of 200 tons per month, of ore from the Triunfo and Maria. The Kohler Brothers, Franco American, Santa Gertrude and other mines on the same lead are considered equally as good as the Trifuno and Maria. All of these mines would undoubtedly pay well with mills. The process of working now employed there is to crush dry, roast, chloriuize with salt, work in barrels with iron to reduce the chloride to metal, and amalgamate.

Our informant expresses the opinion that the average of the ores on the Peninsula will equal that of any other locality on the Pacific Coast. The superintendents now in charge of the mines shipping ores are working under instructions from their principals, are thoroughly efficient and competent men, and are expected to ship ores by every steamer; but under the management above described nothing but failure can attend their most intelligent exertions. In order to initiate a plan for working the ores, it would not be necessary for each individual company to put up a mill; for with proper representation capital might readily be interested to put up one or more mills, sufficient to reduce all the ore that might be raised. Wood would soon become scarce, were a very general movement made for working the ores on the ground, although it is now selling for from $5 to $6 per cord. Salt is delivered at Vestana or La Paz for $9 per ton.

We understand that the course of Mr. Brooks, in the management of the affairs of the Triunfo Company, at the mine, was fully endorsed by the Trustees, at a regular meeting, and that he was unanimously returned to his post. He left on the last steamer.

Scientific Expedition.—The United States steamer Shubrick, Captain Scammon, sailed yesterday morning for the southern ports of this State, having on board Prof. Jackson, of Boston, Prof. Torrey, Chief Director of the United States Assay Office, New York, and the Hon. Levi Parsons, of this city. The object in view is to secure a scientific investigation into the oil regions of Southern California. The report of these gentlemen will be looked for with much interest, and will do much toward settling the uncertainty which now exists in the Atlantic States with regard to the character of the oil regions of California. This expedition is the same to which we alluded in our issue of the 17th ult. as then in contemplation.

J. Ross Browne has been talking to large and appreciative audiences at Reese River. We had hoped ere this to have given our readers some of his views with regard to the mines of that region. Mr. Browne is a man of unusual observation. It has been truly said of him that "he walks along the highway of life with his eyes wide open, seeing everything." We trust he will not forget to tell the readers of the Press something of what he has seen in the depths of the mines of Reese River.

A Bottomless Lake.—A lake has recently been discovered near the Eclipse claim, in the Excelsior district—the latest discovery among the tall peaks of the Sierra Nevada—which, although but 400 feet in length by 200 in breadth, has been sounded to the depth of 700 feet without finding any bottom. It probably occupies the crater of an extinguished volcano. A large number of quartz leads appear to radiate in every direction from this lake, as a center, and quite a mining camp is growing up there.

Petroleum Matters.—There is nothing particularly new with regard to petroleum matters the past week. The Del Norte took up several additional sets of tools on Thursday. Our readers will find a very interesting article in another column on "Oil Wells and Oil Well Boring at the East."

Steam Engines at Auction.—We would direct especial attention to the advertisement of machinery for sale at auction, on Wednesday, July 19th, at No. 39 Fremont street.

Christianity is the element in modern civilization that secures it against the vicissitudes of ancient civilization.

Communications.

In this Department we invite the free discussion of all proper subjects—correspondents alone being responsible for the ideas and theories they advance.

[Written for the Mining and Scientific Press.]

The Problem of Gold and Silver Extraction—A General Review—No. XIII.

BY PROF. L. LANSZWEERT.

FLUXES.

Assuming the process of roasting to have been necessary, and to have been applied, and that a metallic substance still remains to be extraeted from the non-volatile residue, a process of fusion must be resorted to. It is called *smelting*. A slight ehemical consideration of the materials wherewith metals are ordinarily combined, will bring to mind the faet that some are really or praetieally infusible. But fusion, in certain eireumstances, the metallurgist must have. The theoretical ehoice was before him of ehoosing hetween the moist and eolvative, and the dry or igneous process of effeeting liquidity. He was driven by practical eonsiderations to accept the latter. Therefore fusibility is a eonsideration so indispensable to success in his future operations that he must have it. How, then, was he to solve the problem of effeetiug the fusibility of things which are hy their nature infusible? Chemistry renders the solution of this problem easy: there are many substances whieh, though infusible when heated by themselves, fuse readily enough when heated in combination. Hence arises the theory of *fluxes* and *fluxing;* these terms being respeetively applied to substanees which impart igneous fluidity when heated with other substances, and to the manner of using them. Silica or eilicie acid is an infusible body when heated alone; nevertheless it fuses wheu sufficiently heated in contact with potash, soda, or their respective carbonates, and less readily when heated in contact with alkaline earths. Hence if the metallurgic problem were to present itself, of extracting a metal by fire, from a mixture of the same with silica (chemically silieie aeid); potash or soda, or their respective carhonates would be had recourse to, in preference to all others, if eonsiderations of profit and loss did not intervene. The price of the alkalies and earbonates of alkalies does not admit of their common application to the purposes of a flux on the large metallurgic scale; wherefore the smelter, not being able to use the flux wbicb chemistry proclaims to be the best, contents himself with a substitute as near to the theoretie quality as may be practicable. Thus where alkalies or earbonates of alkalies would have been employed to facilitate igneous fusion in the laboratory and on the small scale—probably lime or carbonate of lime would be employed in the larger representation of the proeess as performed by the metallurgist.

Not only do the alkalies and their earhonates perform the functions of fluxes to silieie aein, but also to eeveral metallic oxyds, amongst which those of lead, copper and iron may be cited as familiar examples. Every person knows tbat flint glass, as it is ealled, eontains oxyd of lead; that black bottle glass contains oxyd of iron—eombinations which illustrate, perhaps, as well as any we eould adduee, the quality of the alkalies whieh imparts to them the power of a flux. When it is considered that nearly all the eolors which can be imparted to glass, nay, whieh *are* imparted to porcelain and enamel, are referable to eombinations of metallic oxyds with silieie acid, a still further notion will be eonveyed of the extensive range of combination whieh may be produced by silicie neid under the influenee of igneous fusion. Next, perhaps, to potash and soda, in respeet to its large range of ageney as an igneous flux, eomes borax.

Seldom is it that the assayer in his laboratory operations on mineral ores, by fire, dispenses with both alkalies and with borax; but here in this case, again, considerations of expense restriet the application of this material to the laboratory, and the smelter is obliged to eontent himself with fluxes mueh lower in the scale of ehemical power and efficiency. Perhaps, however, there may not be so many advantages lost from the non-employment of laboratory fluxes, on a large scale as is sometimes imagined. To adopt soda, or potash, or borax, though compatible with the economical arrangement of the laboratory chemist, who will not hesitate to ruin a crucible at each operation, might still accord very ill with the economy of furnace building. The alchemists tried to discover a fluid which should have the property of dissolving all things wherewitb it might come into contact. They neglected to reflect that a necessity would arise for a vessel to keep it in. It might be thus with metallurgists, on the large scale, if laboratory fluxes were cheap enough and plentiful enough to be adopted on the large scale.

Though the number of fluxes which the metallurgist has at his command, for large operations of smelting, be inconsiderable in comparison with those employed in laboratory operations, nevertheless the proeess of assaying is one so important to the metallurgist that every flux known to the chemist deserves his consideration. Under the head of assaying, therefore, to be adverted to hereafter, the chemical agents will be fully discussed.

The preliminary operation of dressing having been performed on a mineral, also the further operation of roasting; if necessary, the final operation of smelting naturally follows. After the general statement given of the nature and properties of fluxes, it will be seen that the operation of extracting a metal from a metallic ore, by smelting, consists in subjecting it to furnaee-heat in admixture with some flux, the object of the latter being twofold; primarily, to liquify and dissolve away refuse matters by themselves in fusion, and seeondarily, in some eases, to aid the decomposition, by the result of which the metal is evolved from its combinations. It remains now for the eompletion of our sketeh of the applianees of metallurgy, that we indicate the peculiarities of the different processes, and the appendages, by means of which those processes for the reduetion of silver ores are affeeted.

[To be Continued.]

[Written for the Mining and Scientific Press.]

A Trip to San Jose and Santa Clara.

Editors Press:—A few notes of a run down into the countios of Santa Clara and Santa Cruz, may not be uninteresting to your readers. Taking the early train from San Francisco, you soon shake off the dust of that famous city, and are out amongst the green fields, and before long, trees, those great rarities of your city, gladden your eyes; and to one who is so accustomed to being surrounded by trees and shrubbery, they were very welcome sights. Two hours of pleasant riding over one of the smoothest of railroads, with a gentlemanly conductor, brings you to the thriving place, at the terminus of the road, San Jose. One thing in regard to this road struck me very forcibly, for it reduced the plethora of my pocket considerably; it was the rate of fare, as compared with roads in the East. Two to three cents per mile is charged on them, while we pay on this road five cents, which must yield very handsome dividends to the stockholders. San Jose is a growing town, numbering about five thousand inhabitants. It is laid out very regularly, although being an old Spanish town, one would hardly expect to see the streets so regular. A few adobe houses still remain as landmarks of the past; most of them being situated on what is called the Plaza, though it is not deserving of that name, for it is merely a common. A number of new buildings have been erected lately, among which is a fine block of stone, the upper part of which is used by the Masons and Odd Fellows; also a new hotel, the Auzerais House, having all the modern improvements, is well kept, being a hotel where one truly feels at home. Education is not neglected in San Jose, for it boasts of good schools. The San Jose Institute and Commercial College and the Academy of Notre Dame are the principal ones. The Institute is a day and boarding school for males and females, and enjoys an excellent reputation at home and abroad. Mr. Gates, its founder and present director, is an old resident of San Jose, and ranks high among the pioneer teachers of our State. Prof. Owen is eminently successful and popular as a commercial instructor.

The Academy of Notre Dame held its annual commencement on Monday, June 26th, which we had the pleasure of witnessing. The exercises consisted of singing, performances on the piano, recitations and distribution of premiums. The young ladies in the several performances gave evidence of a thorough training. The Sisters are untiring in their endeavors to educate the pupils entrusted to their charge. In the evening we were present, by invitation, at the closing exercises of the Santa Clara College, situated in the town of that name, which is a delightful drive of half an hour from San Jose, through an avenue of trees, which is so closed at the top by the branches that the sun hardly reaches you. Santa Clara is a small town, supporting quite a number of manufactories, the principal hotel of which is the Cameron House, kept by Mr. Cameron, who is a host in himself. The Santa Clara College is a very large and thriving institution, the buildings and grounds being arranged in a superior manner. We were very much pleased with the exercises, which took place in the gymnasium of the institution, a room admirably adapted for such purposes. The course of study must be very thorough to allow the students to acquit themselves in the creditable manner that they did. Great care is taken to give their pupils a most thorough education, and one only wants to witness the evidence as shown at the Commencement to be convinced that they receive it.

TRIP TO THE NEW ALMADEN MINE.

Returning to San Jose, we rode over the most dusty road that was ever traveled, to New Almaden, the point at which the works of the Almaden Quicksilver Mining Company are located. None but those employed by the company are allowed to live there, so that gamblers and others of that class are not to be found there. The mine is situated about two and a half miles from the town, and is reached by a winding road up the mountain side, the view from which is very fine, looking through the valley for miles. Through the kindness of the officers of the company, we were permitted to visit the interior of the mine. Passing down the shaft in the bucket, down, down into the dark regions of the earth, the feeble light of the candle only making the darkness more complete, two hundred and fifty feet, we reached what is called the Big Flat; from thence we passed through the different portions of the mine, seeing some fine puddings of cinnabar, for it does not run in veins as silver and other ores, but is found in masses, which are called puddings. While we were below a blast was made, and as we were not informed, it was some time before we could proceed. In returning to daylight we used the ladders, and before we were half way up, we wished ourselves in the bucket, for we preferred steam to propel us instead of our legs and arms; but it was too late to turn back. The walk through mother earth was very interesting, and a visit to this mine will pay any one, provided he is a lover of nature in any form. There is quite a settlement on the top of the mountain, composed of the miners, most of them being Spanish.

Getting back to the town, we passed through the furnaces where the ore is reduced and the quicksilver obtained. Refreshed with a drink from the soda spring located on the company's grounds, we wended our way to the mine of the

MAROARITTA COPPER MINING COMPANY,

Situated about a mile from the hotel. Had a hard climb up the steep hill, being very tired with our tramp through the Almaden Mine; but the goal was at last reached. One of the miners took us down a shaft twenty-seven feet, where we saw ore which yields eighteen per cent. The vein looked very rich, and did they not obtain better beneath, it would almost pay to work this. There has been some seventy tons sold from this mine, which brought in San Francisco ninety odd dollars a ton. It was obtained at depths of twenty-seven and sixty feet. That taken at sixty feet was very rich and considered very fine. There is water in the shaft, which has stopped mining, but as soon as a tunnel, which they are making, strikes the shaft, the mine will be drained and they will then commence taking out ore again. From the indications this mine, if properly worked, must prove very valuable, and if copper exists here in such large quantities, it must be found elsewhere, and Santa Clara county may yet prove rich in minerals, which, with the agricultural and manufacturing interests, will make it very rich. Back to San Jose, we took the stage, at ten in the morning, for

SANTA CRUZ.

Reaching there about five, dusty and hungry, but feeling well paid, even under those circumstanees, for we had seen some grand scenery. We crossed the mountains, and in ascending and descending, the road winds around them, making frightful turns, in fact the road for miles is only composed of curves. It makes one's hair almost stand on end to look out of the coach windows, deep gorges, sometimes on both sides of us. Strange to say, but ten accidents have occurred on the road, and no one has been seriously injured. To have a little variety, we walked up a very steep hill, thus making it easier for the horses; but next time we travel in such warm weather, we shall keep our seats. Santa Cruz is not a very interesting town, and were it not for the sea bathing would possess no interest for the pleasure seeker; but there are many here now in search of pleasure and health. It has from fifteen hundred to two thousand inhabitants. Manufacturing is carried on quite extensively. Leather, powder and paper are among the many articles produced. We were much pleased with passing through the well conducted tannery of Birton & Jones. The paper mill, which we also had the pleasure of visiting, is situated in a picturesque spot on the San Lorenzo river, from which the power is obtained. At some points on this little stream, some very fine scenery is to be seen. Were it not for the dust, there would be some pleasure in riding around the country, for there are some delightful drives. Yet we say take the drives and let the consequences rest with the old Pacific. The beach is excellent for bathing, and after a bath in salt water one feels like a new being, and as though he could devour ten of the good dinners furnished at the San Lorenzo Exchange. A steamer makes weekly trips between here and San Francisco, and there is also a new line of sailing vessels plying between here and there. If there was a steamer which made a quick trip to the city, we should be tempted to take it on our return, but as it is, we shall have to brave the dust again.

Santa Cruz, June 30th, 1865. H.

The Deepest Gold Mine.—In an account of the quartz mines of Amador county, the Jackson *Ledger* remarks of a notable gold mine, at Sutter creek, as follows: "The Eureka and Badger lode is owned by Messrs. Hayward and Chamberlain. These gentlemen were interested in these claims as early as the winter of '53, and full owners in '57. It would be difficult to estimate the amount of quartz that has been taken from these mines or its value, but suffice it to say that the amounts of both have been eminently satisfactory, and that a million would not buy them. The main shaft is 960 feet in depth, the deepest in the State, so far as we know. The vein is what is supposed to be the great "mother lode," and appears to be in the extended system of quartz veins on the western slope of the Sierra Nevada what the Sacramento river is to its numerous tributaries. However that may be, its dimensions are Titanian, the size in the lowermost level ranging from twenty to forty feet. This is not only the deepest mining shaft in the State, but, as a gold mine, the deepest in the world. Does it not disprove the theory of geologists that the amount of gold decreases in exact rate with the depth? If not, it certainly proves that there are exceptions to the rule. Connected with this mine are two mills; one of forty stamps—water and steam power combined—and the other a water mill of twenty stamps. About seventy-five men are employed in mills and mine, and eighty tons of rock worked per day."

Careless Writers.—The report of Postmaster General Dennison shows an extraordinary amount of carelessness on the part of the letter-writing community. During the last year 3,508,025 dead letters have been received—over 3,000 a day. Many of these letters contained money, deeds, bills of exchange, drafts, checks, jewelry and other valuables. Some of them mis-directed, others not directed at all, others unstamped, and others partially directed. Thousands of dead letters were returned to the writers, but the great majority of them had to be destroyed. This statement ought to teach the public to be more careful in their correspondence, for the suffering caused by these lost letters is incalculable.

The Roll of Europe's Billows.—Nearly five thousand immigrants from Europe arrived at New York recently in one day. Six steamers brought four thousand and three ships carcoled over the Atlantic with the remainder. More than three thousand five hundred of these immigrants are women, and nine-tenths of the latter will be looking for situations as "the greatest plague in life," in somebody's kitchen before the week is out. About eleven hundred came from Continental Europe, and make very good "helps," with a little instruction.

Prof. Blot's cooking class at New York has grown from 30 to 70. He gives three-hour lessons, cooks all kinds of things before his pupils, and lets them taste and examine.

Ants.—A correspondent of the *Horticulturist* says it is only necessary to sprinkle some ground coffee on the ant-hills or on some places where the insects are frequently seen, and within fifteen minutes not one of them will be found. This is an old plan, but never fails.

Soda fountains have been introduced on the trains of the Little Miami Railroad. Something new.

John G James, who died recently at Doylestown, Pennsylvania, has left all his property, valued at $50,000, to the Sunday School Union.

Mechanical.

THE FOUNDRIES.

Last week we visited but few of the larger establishments, as we confess to having felt some curiosity as to what the smaller shops were doing; and for the better gratification of this feeling continued our observations almost entirely to them—the only exception being a short visit to the splendid and extensive establishment of H. J. Booth & Co., of the Union Works.

Passing down First street, our attention was attracted to a modest-looking establishment, at No. 9, which, though appearing very quiet on the outside, was a picture of thrift and industry within. This was the Idaho Machine Shop, lately opened by Mr. D. C. Hall, whom we found with his coat off and sleeves rolled up going into the work with a will. But the dress of the mechanic could not hide the marks of the true gentleman, which were visible in every word and action as he showed us his neat and orderly shop.

Another very interesting place which we visited was the Brass and Bell Foundry of Gallagher & Weed. Here, though there are but few *big things*, such as they make in the iron foundries, specimens of curious and beautiful workmanship abound on every hand, prominent among which we noticed a large steamboat bell, a counterpart of two manufactured for the steamer Washoe and of one now in use on the ocean steamer Pacific. The proprietors intend exhibiting this bell, with several others of the same kind, at the coming Fair of the Mechanics' Institute.—These bells will be of all sizes usually manufactured in this country, which vary from twenty-five inches diameter down to six, and of every character of tone and finish.

At John Loekhead's steam-engine works we were shown the drawings and patterns of several propellers, the principal one of which is the new screw propeller for the tug boat Rabbani, now taking in supplies at Clay street wharf for her voyage to the Columbia bar, where she is to be employed. This is the vessel whose speed on her trial trip, some weeks since, attracted so much attention. She ran out to the Farallones and back, and behaved throughout in the most satisfactory manner. Her propeller is eight feet four inches in diameter, with four blades, and is driven by a single inverted engine of 150-horse power and twenty-eight inches diameter of cylinder, with twenty-eight inches stroke, making, with sixty pounds of steam, seventy-five revolutions per minute, and propelling the vessel in smooth water at the rate of fourteen miles an hour. At the time of our visit there were three large hoisting engines in course of erection, for use in unloading ships at the wharves, and a small engine, of a peculiar pattern, which Mr. Loekhead expects to use in his shop to drive his machinery. It is a vertical, inverted engine, like those of his propellers, but differs in having the frame cast in one solid piece, making it much stronger and less liable to get out of order. Mr. L. thinks that when this style of engine comes to be known it will be preferred to all others, on account of its simplicity and compactness.

At the Union Foundry, Messrs. H. J. Booth & Co. have on hand a large amount of interesting work. Among the mining orders, we noticed two beautiful engines, nearly finished, which, we were told, were intended for the Idaho mine, Idaho Territory. One of these is an eight-inch cylinder, and is intended for hoisting, while the other, a fine twelve-inch with twenty-four inch stroke, will be employed for pumping the shaft. A ten-inch engine, twenty-inch stroke, with hoisting gear, has just been shipped to the Gold Tunnel Mining Company, Nevada City. A fourteen-inch engine, capable of driving forty stamps, with a ten-stamp mill, six amalgamating pans and two settlers, have just been completed for Mr. Hazeltine, Reese River. But the great attraction for the month in this establishment is the new railroad locomotive, the first ever built in California. Two of these, intended for the S. J. R. R. Co., were drawing rapidly toward completion, and begin to show signs of the immense strength and majestic beauty which are characteristic of great efforts in mechanical design. A third locomotive, precisely like the first two, and intended for the S. V. R. R. Co., is also progressing finely. A view of this splendid establishment, with its numerous shops crowded with immense machines carving and shaving the solid iron as though it were the softest wood, and its two hundred and fifty cheerful operatives, presents a scene calculated to inspire the mind of the beholder with elevated and expanded ideas of the great industrial resources of the Pacific coast.

Brick Making.—We some time since alluded to a new arrangement of permanent walls or kilns wherein to burn brick, whereby much waste of material and loss of time would be avoided. The Sacramento *Bee* of the 24th ult., in announcing the successful issue of the experiment says: "This morning, Phillip Callaghan opened his 'clamp kiln' of four hundred thousand brick, situated just below the R street levee, between Ninth and Tenth. This, the first trial in the city of a 'clamp kiln,' has proved a most perfect success."

Failed.—The project of constructing an underground railroad under Broadway, New York, has fallen through. The bill passed both branches of the Legislature, but was vetoed by the Governor. The principal reason for the veto was the fact that the bill was not sufficiently explicit in its provisions as to time, etc., which the corporation might consume in constructing the work. Had the bill passed, that great throroughfare might have been rendered almost impassable for four or five years. There is very little probability that the project will be again resumed.

The Bessemer Patent in the United States.—The Albany Iron Works, in Troy, have commenced the manufacture of mild steel, under Bessemer's patent, of which they have the entire control in the United States. The works for this manufacture have been in progress for nearly a year. It is expected that the demand for locomotive tyres will occupy the works to their present capacity; but it is intended ultimately to make steel boiler plates, and whatever else there may be a demand for.

Improvement in Carriage Making.—They are making carriages after a plan in England which is worthy of attention. The frame work is of angle iron, and the panels are of papier mache. The paper is stiffer than leather, and nearly as tough. Every part of the carriage body usually made of wood, is formed of papier mache. The springs are under the body, American fashion. The window runs along the roof on the inside, and draws down like a sash; and there is a sash door, which may be pushed down, and coils itself under the body of the vehicle. The ventilation is also improved.

A New Breach-Loading Musket.—Samuel Wilkes and John Leek, workmen at the American Machine Works, in Springfield, Mass., have invented a new breach-loading musket, the principle of which is quite original. The mechanism is very simple and not liable to get out of repair, while the piece may be fired very rapidly. The first gun of the kind has just been completed, and will be submitted to Major Laidley for his inspection.

Cost of the Rebel Navy.—One hundred millions of dollars would probably fall short of the expenditures of the rebels in their defensive gunboats, iron-clads, rams, floating batteries and transports. This profitable investment all went into the rebel sinking fund.

The latest invention in connection with the jewelry robberies is to connect the safes with the police station by means of telegraphic wires attached to the ordinary street telegraph wires.

Machines for seeding currants and stoning raisins are in common use in England.

A loom has been manufactured in Edinburgh, for the Countess of Eglinton, by which her ladyship intends to manufacture, herself, dresses for her own use.

The newest things in crinolines, says a Paris letter, is the substitution of silver for steel in the framework.

IMPROVEMENT IN IRON SMELTING.

A new and, as reported, a very successful improvement has recently been introduced into the system of iron smelting, at the foundries in Manchester, England. This system is nothing more or less than the introduction of steam in the upper portion of the cupola, for producing a blast, similar to the use of exhaust steam as lately applied for ventilating purposes to several mines in Washoe. The experiment was first tried at the foundry of the Messrs. Woodward, at Manchester, and since its success has been fully proven, quite a number of of the largest iron works in that city have applied the invention to their cupolas, and it is thought that it will soon become general not only for smelting pig iron, but for obtaining the metal from the mineral as well. The Manchester *Guardian* describes the invention as follows:

The ordinary method of smelting iron is by blowing through two or more tuyeres a powerful blast of air into the cupola which has been charged with pig iron and coke. To produce the blast in the cupola where the experiment was exhibited on the old method, a 4ft. fan, requiring eight horse power, was employed. By the new method, invented by Messrs. Woodward, the fan and all its usual accompaniments of shafting, strapping, oil, wear and tear, have been dispensed with. The cupola is two feet four inches diameter, and of the usual hight. At its upper portion, immediately above the part where the charge is put into the cupola, a steam pipe $1\frac{1}{4}$ inch bore, is inserted into a wrought iron chimney, about equal in length to the depth of the cupola below. The action of the jet of steam thence projected is to create a partial vacuum below it, and, as a consequence, a strong draught of air through the mass below. The working of the furnace is described as follows: "The fire is lighted and the charge thrown on in the usual manner, after which the charging hole is closed; the steam is then turned on and admitted into the funnel. The column of steam now rushing along carries or draws with it a quantity of air from below, thus producing a partial vacuum immediately above the fuel and metal to be acted upon. All being closed at the top, the only place left for the air to enter is through the openings at the bottom, through which it flows in one constant and unbroken stream, acting on all parts of the fuel alike, thus securing a general and uniform heat throughout the furnace, consequently a more perfect combustion of the fuel." It was stated that the new method saves a large quantity of coke, and that a much better kind of casting is now obtained from a common class of pig iron than could possibly have been got formerly. For smelting a ton of iron, little over a cwt. of coke is required, while the bringing down of the molten metal is performed much quicker. An advantage to persons outside the works is the absence of the glaring blaze and shower of fiery sparks always found on the old method. In fact, a little steam issuing from the chimney top, or top of the cupola, was the only external indication that the blast furnace was at work. The extreme simplicity of this invention strikes one with wonder that so valuable a discovery had not been made long since, especially when we remember that in our locomotives a jet of steam has long been projected into the fire-box to increase combustion, and by its aid to raise steam from a pressure of 30lbs. to 120lbs. in twenty minutes. Another advantage of this invention consists in its easily allowing cupolas to be worked in situations where it is inconvenient to have steam engines, as on men-of-war, and in warfare, for casting shot, shell, etc., and in many other situations. In foundries, where it is found requisite in cases of "breakdowns" to work unexpectedly late at night, this invention will be of great value, as it can be got to work within a very brief time without any engine power. We understand that a further improvement in this apparatus will shortly be completed, by means of which the upper portion of the cupola will be surrounded by a boiler, which will supply steam to the cupolas at a still further reduction on the present trifling cost.

A New Nail Machine.—The Wickersham nail machine, a new invention, is on exhibition in Philadelphia. Each machine is capable of turning out fifty kegs of the best quality of nails per day.

Gun Cotton in the Army.—The gun committee, says the *Army and Navy Gazette*, have been trying further experiments with this highly explosive material, and there seems to be every hope of its being used instead of powder, as a bursting charge for shells, and also as a mine in the torpedoes and other similar vessels, which are expected to be largely employed in any future naval war.

Grass Valley Directory.—We have received from W. S. Byrne, Esq., compiler and publisher, a "Directory of the Township of Grass Valley." The work appears to have been prepared with much care and diligence, and contains very interesting historical sketches of the town and most of its leading mines. Persons desirous of becoming better acquainted with the history and resources of this, the chief mining center of California, should purchase a copy of the work, which can be obtained of A. Roman & Co., Montgomery Street. The following paragraph, which we copy from this work, will be read with interest:

Grass Valley Township, the most populous and prosperous of interior Districts, contains, aside from its saw mills, 22 quartz mills or rather 19 quartz and two cement mills, running 208 stamps. Of these mills, eight do custom work, the remaining thirteen being engaged in operating for their owners. The number of stamps will in all probability be increased to three hundred during the present year. We already have thirty-eight dividend paying quartz mines, to which at least twice the number may be added before 1866, judging from the first-class ledges now being opened. A thorough canvass of the Township convinces us that no fewer than twenty-five hundred men are engaged here and in the vicinity in quartz mining, of which number about fifteen hundred are employed by large companies, the remainder being engaged in prospecting for themselves or working ledges without hoisting or pumping machinery. The discoveries of the present season may be safely enumerated by hundreds, many of which now promise to be productive mines for many years to come. More thorough prospecting has been done in Grass Valley Township during this season, and generally with better results, than during any five years from 1851 to 1864.

The town of Grass Valley never presented a more healthful aspect than at the present time. Excitement abroad, which formerly worked most disastrous results to the town's interest, are now powerless against us. Hosts who wandered off to Nevada, Reese River, Humboldt and Boise, in search of wealth too tardy in its advent to them here, have returned to Grass Valley, satisfied with their first love, and content to live here and accumulate fortunes. Eastern and local capital greedily seek investment in our mines, and, while there is no reckless speculation among us, many thousands of dollars have been invested in quartz mines here during the present year.

Cotton Manufactures in England.—An English paper says: "A very important question, however, looms in the future that may seriously affect the price of cotton, and that is the prospective scarcity of labor in the manufacturing districts. Even now, although the consumption is little over 30,000 bales per week, there are complaints of the difficulty of finding skilled hands, at least in the weaving departments. The four years of enforced stagnation have scattered the workpeople very much, and no new hands have been trained up in the interval. Though the relief lists still show a considerable amount of destitution, it is undoubted that there is no large reserve of unemployed skilled labor, and even though trade became highly prosperous, and every available spindle was put in motion, it is questionable whether hands could be found to work more than eighty per cent. of the full consumption of cotton before the war."

A Novel Idea.—The New York *Tribune* has some peculiar notions about railway fares. It proposes to adjust the rates to the speed of the train. 1. Emigrant trains to carry at one cent per mile. 2. Common trains running twenty miles per hour to charge two cents per mile. Express trains, to travel forty miles per hour at four cents per mile, the fare to be refunded when the train fails to make the connection, and where it is thirty minutes behind, but makes the connection, half the fare to be returned, so as to make it common time. In seasons of obstructions from snow, flood or ice, express trains to run on common fare and common time. These fast trains to be preceded five minutes by an engine, at whose approach a gate shall be closed at every highway that crosses the track on its level, and kept closed until the forty-mile train has passed. In places, however, as in the streets of cities, where it is not practicable, the speed to be reduced to twenty miles per hour.

It has been beautifully said that "the veil which covers the face of futurity is woven by the hand of mercy.

George Peabody, the London banker, is about to return to his native country, to spend the evening of his days and sleep with his fathers.

In Amsterdam, a speculator has built a concert hall which will seat eight thousand people.

City Stock Reports---San Francisco Stock and Exchange Board.

From the "Weekly Stock Circular" of the Associated Brokers.

SAN FRANCISCO, SATURDAY MORNING, July 8th, 1865.

The condition of the money market is substantially unchanged and there seems to be no improvement in the loan demand. It is quite apparent that the available capital of this city now exceeds the requirement in the ordinary course of business and that the tendency is to lower rates of interest. The London and San Francisco Bank, under the management of Mr. M. S. Latham and a Board of Local Directors, with a paid up capital of $500,000, will commence business in San Francisco Aug. 1st. We are informed that the present capital of this institution is to be largely increased, and that its operations will embrace a general banking and exchange business in London and San Francisco, and between these cities and all parts of the world.

Receipts of treasure from the interior mining districts since Saturday last have been light, and amounted to less than $800,000.

Bullion is meeting with no special inquiry and the supply continues ample. Gold bars are dull at 820@830 and silver bars rauge at about par to 2 ℔ cent. discount.

Legal Tender Notes, in the absence of telegraphic communication with the East, have been dull and inactive, and trifling sales were made at 73c@73⅛c, then at 73⅛c, and closing at 73⅛c bid, 73¾c asked.

The Share market has been exceedingly apathetic this week and the transactions at the Board were of less importance than for months past. A number of dealers have been out of the city, and the festivities incident to "the 4th," absorbed a large share of the attention of others. There is little or no improvement to note and some stocks are lower than at the close of last week. Nevada advices have been meager and devoid of special interest, but so far as we can learn, the work of development is progressing with the usual vigor without disclosing anything new.

Gould & Curry is dull but firmly held at about $1,750, ex-dividend of $50 per foot paid on Thursday last out of the earnings for the past month. The upper chambers of the mine show some improvement and the receipts of bullion from the mill are up to the usual average.

Savage has also been apathetic but well maintained. Small sales were made at $1,375@$1,390. The receipts of bullion during the month of June amounted to $115,000, and the immediate liabilities of the company have been reduced to about $75,000. Some conflicting titles were adjusted last month, involving an expenditure of $15,000. The mine is now yielding an average of 80 tons of ore per day, worth some $45 per ton. There is no material change in the lower level, but the indications continue favorable. Work has commenced upon the new main shaft.

Alpha is in rather less favor and a few feet were sold at $1,450@$1,410, then at $1,400, and closing at about $1,450 asked. Preparations are being made to thoroughly develop the lower level of this mine, meanwhile some good ore is taken from the upper chambers.

Yellow Jacket declined from $1,090 to $990, rose to $1,030, and sold yesterday at $1,060@$1,050; some 106 feet in all changing hands. The cash liabilities of this company are now about $200,000, and $132,000 will be due in nine and twelve months, in payment of the Morgan Mill property. To complete the improvements to this mill, the reduction capacity of which is to be increased to 80 tons per day (with 40 stamps), $50,000 will be required within the ensuing sixty days. In addition to this it will also require an expenditure of some $50,000 to sink the main shaft to the depth proposed and to pay for work already done upon it. This shaft is now down 180 feet. The west cross cut from the south drift discloses some streaks of good ore and may lead to a well defined deposit in that part of the mine. An average of about 140 tons of ore per day, worth $37½ per ton, has been hoisted to the surface during the past ten days.

Crown Point has been moderately dealt in, and 10 feet were sold, declining from $770 to $750, rallying to $775, and closing at about $760. The ore now taken from this mine shows some improvement, and the receipts of bullion are likely to increase. The propriety of purchasing the Rhode Island Mill is talked of by some of the stockholders and trustees of this company. The capacity of this mill is about 30 tons per day.

Belcher rose to $780, declined to $725, and sold yesterday at $715 @$720. Hale & Norcross fell from $560 to $460, and closed at about $480. There is nothing new from either of these claims.

Ophir was steadily maintained at $500 cash, and $480, seller 30, and sold yesterday at $485. The trial of the Burning Moscow *vs.* this Company resulted in a disagreement of the jury. Eight out of twelve jurors were, it is said, in favor of a verdict for the Ophir. The body of ore between the sixth and seventh levels is improving, and from this part of the mine 25 tons, yielding $50, and about 15 tons, giving $90@$120 per ton, are now daily sent to the company's mills. The receipts of bullion for the month of June amounted to $47,000.

Empire Mill and Mining Company is strongly held at about $500 per share. The yield of this mine for the past month amounted to some $70,000, and a dividend of $20 per share has been declared. The company recently purchased about 2,000 cords of wood for their use the ensuing fall and winter and dishursed $20,000 in June for this purpose. An average of 100 tons of ore per day is now daily taken from the mine, the larger portion of which is first and second-class ore.

Chollar fell from $345 to $335, and sold yesterday at $330@$325. In stopeing up from the fifth to the fourth level in the south mine, about twenty tons of $40 ore are daily taken. The indebtedness of this company is now about $105,000. Potosi declined from $335 to $325, and was dealt in yesterday at $325@$320. From the third level (above the tunnel) some 20 tons of fair ore are daily hoisted to the surface. The present liabilities of this company amount to about $140,000. The Chollar Potosi Company owe $100,000, on account of the Grass Valley settlement and $100,000 additional, so that the combined debts of the two companies are at this time about $445,000, to be reduced to $305,000 after the payment of the present assessment of $50 per foot each.

Uncle Sam continues in favor and some 300 shares were sold, receding from $200 to $185, advancing to $250, and selling yesterday at $245@$267. An assessment of $50 per share was levied June 29th. Overman is also in better request, advancing from $180 to $250 and closing at $250@$257. The two lower levels in the mine are said to look very promising. An assessment of $50 per share was levied on the 29th ult.

Imperial fell from $238 to $221, ex-dividend of $10, paid on the 5th inst., rallied to $235, and closed at about $234. The mine is unchanged, and the affairs of the company are deemed more flattering than for some time past.

Burning Moscow has been largely dealt in and nearly 2,000 shares were sold, advancing from $32 to $37, dropping to $31, rallying to $36, declining to $28 and closing at about $31. An assessment of $20 per share was levied July 6th.

Bullion rose from $140 to $150, fell to $120 and sold yesterday at $190@$175. Pacific Insurance Company was sold at $140, ex-dividend of $6 per share, and is now held at $142. California Steam Navigation was sold at 74 ℔ cent. Firemens' Fund Insurance is offered at $110.

The aggregate sales of Stocks and Legal Tender Notes since Saturday last, amounted to $436,909.

Monday, July 3.

84 shs Ophir at 490 per foot.
48 shs Ophir at 490 per foot, r w.
2 shs Uncle Sam at 202½ per foot.
5 shs Uncle Sam at 200 per foot.
1 sh Uncle Sam at 197½ per foot.
1 sh Uncle Sam at 195 per foot.
2 shs Uncle Sam at 196 per foot.
2 shs Uncle Sam at 196 per foot, r w.
4 shs Yellow Jacket at 1085 per foot.
6 shs Yellow Jacket at 1080 per foot.
1 sh Yellow Jacket at 1080 per foot, b 3.
7 shs Yellow Jacket at 1075 per foot, a 5.
1 sh Yellow Jacket at 1075 per foot.
1 sh Belcher at 750 per foot, r w.
1 sh Belcher at 750 per foot.
2 shs Belcher at 760 per foot.
2 shs Hale & Norcross at 560 per foot.
12 shs Chollar at 340 per foot, s 3.
8 shs Alpha, G H, at 1450 per foot.
20 shs Burning Moscow at 37 per share.
10 shs Burning Moscow at 37½ per share.
10 shs Burning Moscow at 38 per sh, r w.
60 shs Burning Moscow at 38 per share.
10 shs Burning Moscow at 37 per share, b 3.
10 shs Burning Moscow at 35 per share.
100 shs Burning Moscow at 36 per share.
10 shs Burning Moscow at 36 per share, r w.
76 shs Bullion at 150 per share.
5 shs Bullion at 150 per share, r w.
1 sh Bullion at 151 per share.
10 shs Bullion at 148 per share.
10 shs Petaluma Mill at 100 per share.
$ 6,630 Legal Tender Notes at 73 per cent.
$ 5,000 Legal Tender Notes at 73½ per cent.
$10,000 Legal Tender Notes at 73 p ct, s 3.

AFTERNOON SESSION.

3 shs Belcher at 750 per foot, a 3.
9 shs Belcher at 750 per foot.
1 sh Uncle Sam at 197 per foot.
17 shs Uncle Sam at 197 per foot, s 30.
1 sh Yellow Jacket at 1070 per foot.
1 sh Yellow Jacket at 1070 per foot, s 3.
2 shs Yellow Jacket at 1065 per foot, s 3.
1 sh Yellow Jacket at 1060 per foot, s 3.
1 sh Yellow Jacket at 1050 per foot, s 12.
2 shs Yellow Jacket at 1050 per foot, s 15.
50 shs Ophir at 500 per foot.
8 shs Minerva, G. H., at 150 per foot, r w.
14 shs Burning Moscow at 35 per share.
20 shs Burning Moscow at 34 per share.
20 shs Burning Moscow at 33 per share.
10 shs Burning Moscow at 32½ per sh, b 3.
35 shs Burning Moscow at 31½ per share.
50 shs Burning Moscow at 31 per share.
20 shs Bullion, G H, at 146 per share.
10 shs Bullion, G H, at 146 per share, s 3.
10 shs Imperial at 232½ per share, a 30.
10 shs Imperial at 230 per share.
10 shs Imperial at 234 per share.
10 shs Imperial at 227½ per share, s 30.
10 shs Imperial at 231 per share.
Amount of sales.....$104,825 00

Tuesday, July 4.

Board not in session.

Wednesday, July 5.

6 shs Belcher at 750 per foot.
6 shs Belcher at 740 per foot.
3 shs Belcher at 750 per foot, s 15.
5 shs Yellow Jacket at 1025 per foot.
1 sh Yellow Jacket at 1005 per foot.
4 shs Yellow Jacket at 1000 per foot.
5 shs Yellow Jacket at 1010 per foot, s 3.
6 shs Yellow Jacket at 1010 per foot.
1 sh Yellow Jacket at 1020 per foot.
3 shs Yellow Jacket at 1015 per foot.
4 shs Alpha at 1425 per foot.
6 shs Uncle Sam at 195 per foot.
35 shs Uncle Sam at 200 per foot, b 3.
16 shs Uncle Sam at 197½ per share.
5 shs Uncle Sam at 197 per foot.
36 shs Ophir at 490 per foot.

LAND SLIDES ON LAKE ERIE.—A quite singular, and to the parties owing the land, a very unprofitable phenomenon in the shape of huge "land slides," occurs quite often on the farms running along the Lake Erie shore. The shore is generally a high bluff, and the land is for some distance back underlaid with a sort of quicksand. The depth of soil covering his quicksand may be twenty or even fifty feet. It does not seem to matter much. Some little rivulet running over the bluff will first plough a small gully for itself, and a heavy rain setting in will loosen the earth and cause it to cave the edge of the bluff. The Lake will then wash away at the foot, and the treacherous quicksand will commence to slide gradually into the Lake, carrying with it a tremendous amount of superincumbent earth. Soon a huge branch is made into the farm, which is continually enlarged by renewed slidings of the ever-shifting foundation beneath. Many fine pieces of land are cut into this way by the acre, and no way of stopping the "slide" is as yet discovered. On one occasion the residents near one of these openings gathered together and cast into the chasm an immense amount of trees, logs, brush, and such material, hoping to form such mixed mass of substance that could not slip out into the lake. They were just resting from their labor and congratulating each other the success of this effort to barricade the exit of more land, when suddenly the whole mass of stuff began to move, and in a short time gracefully into and under the water, leaving people to console themselves as best they could.—*Erie Dispatch.*

EARTHQUAKE IN MISSOURI.—A little before seven o'clock yesterday morning, the shock of an earthquake was felt in this city and Carondelet and Alton. A good deal of alarm was excited. Persons not yet up were aroused by the shock, and houses exposed vibration so much as to cause the overthrow of flowpots, etc. Children were much frightened, and at Alton the bells of a clock were set in motion. There were three distinct shocks, first being the most serious—the others following in quick succession. What effect may have been produced in the southeastern portion of this State, where such visitations have been quite common, is as yet unknown. The earthquakes at and around New Madrid are matters of history; there lakes of water suddenly became high land, and trees standing upon high ground were at once hidden from view and the whole surface for a great many miles was at once changed in position and appearance. The effects are visible at this day, shocks are of frequent occurrence. About seven o'clock on Sunday evening a storm of lightning, thunder and some rain passed over city from the north, and during the night, rain fell for some time.—*St. Louis Republican* of May 30.

ALL QUIET SOUTH OF THE POTOMAC.—The New York *Times* says: "The whole South is now profoundly quiet. There is railroad travel from Washington to South Carolina. There is telegraphic communication between Washington and Central Georgia, which will presently be completed to Montgomery and Vicksburg. The lines of telegraph between Memphis and New Orleans have been opened, and all the old connections will be resumed. Steamers traversed all the rivers of the South, and preparations are everywhere being made for the resumption of business. Before the close of Summer the commerce and trade of the South will have a great development. Its products, long held back, will find their way to the markets of the world, and the activity of its people and of the North will find a most profitable field."

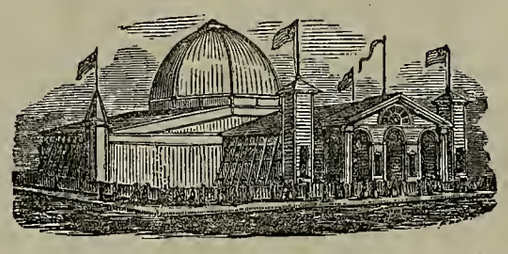
EASTERN CAPITAL IN THE MINES OF NEVADA COUNTY.—The Nevada *Transcript* of June 23d remarks:

The moneyed men of the East are becoming satisfied of the wealth of this county, and their agents are now here seeking investments. Within the past month some eight large sales have been made in this vicinity, while purchases have also been made in other parts of the country. Our prospectors are usually poor men, and unless a ledge is found which pays from the surface down the work of developing a mine is slow. The great want of the miner has been capital, and now that it is coming in we may look for great progress in the development of mineral wealth.

GOVERNMENT is preparing to collect much of its postal revenues from delinquent Postmasters. When the rebellion broke out most of the 9,000 Postmasters in the rebel States were largely in arrears for stamps and newspaper postage. By an Act passed last winter, the real estate of a Postmaster and his securities may be seized by attachment.

DR. PRETTY, an English physician, claims to have found a very simple mode of arresting the hiccough. It is sufficient to squeeze the wrist, preferably that of the right hand, with a piece of string, or with the fore-finger and thumb of the other hand.

THE FIFTH INDUSTRIAL FAIR



OF THE MECHANICS' INSTITUTE OF SAN FRANCISCO,

To be Held in the Mechanics' Institute Pavilion in August, 1865.

The Mechanics' Institute having determined to hold their Fifth Industrial Fair during the coming season, the Executive Committee would respectfully invite all persons desirous of exhibiting Machines, Manufactures, Agricultural Implements, Horticultural Products, Minerals, Ores, and Works of Art, to make application immediately, in order that the proper space may be allotted them.

The Exhibition will be open to the public on Thursday, the 17th day of August, at 10 o'clock A. M.

The general management of the Fair is entrusted to an Executive Committee, consisting of the officers of the Institute.

No contracts or agreements will be recognized unless made by the authorized agents of this Committee.

A competent person will be in attendance at the Pavilion to receive and register all goods designed for exhibition, and will receipt therefor.

Contributions of Machinery and other articles that require long time to prepare for exhibition, will be received from the 15th of July to the 2d of August.

Articles for exhibition that require large space may be entered on or before the 20th day of July, and space will be allotted to the exhibitor on or before the 2d of August.

The Picture Galleries will be ready for the reception of Pictures, Embroideries, Wax and Fancy Work of all kinds, on the 1st of August, when space will be allotted.

The Committee will be prepared for the reception of Fruits, Flowers, Agricultural and Horticultural Productions, and design to have the tables so arranged that the best display possible can be made in this department, and every effort will be made and care taken to preserve their freshness, so that exhibitors may receive full credit for their productions. Those wishing space on these tables should engage it at an early day. There will be space reserved for additions in this department during the Fair.

The several transportation companies, as on former occasions, have, with commendable liberality, consented to transport articles intended exclusively for exhibition free of charge, and Messrs. Wells, Fargo & Co., in like manner, will take charge of them.

The Committee have the fullest confidence that the coming Fair will not only be the most complete and varied in its character, but will also be more attractive than any previous exhibition of this kind on this coast.

No pains or expense will be spared to give the contributors satisfactory opportunities in the spacious pavilion of the Institute for the display of their contributions, and to furnish whatever may be necessary to make the Fair an institution where those who frequent it may be both pleased and instructed.

All articles forwarded should be labeled "For the Industrial Exhibition," San Francisco.

All communications to be addressed to C. S. HIGGINS, Corresponding Secretary.

NOTICE.

The co-partnership heretofore existing between John Youngberg, Stephen H. Covert and William B. Gleason, is hereby dissolved by reason of the said Gleason and Covert having left for the East. This is to notify all persons that I shall pay no debts contracted by the said parties from and after this date. JOHN YOUNGBERG.

San Francisco, May 15th, 1865. 20v10-1m

Our Patent Agency.

THE PATENT AGENCY of the MINING AND SCIENTIFIC PRESS has been signalized with remarkable success during the past two years. The importance to the inventive genius of this coast of a thorough and reliable agency for the solicitation of LETTERS PATENT from the United States and foreign Governments cannot be over-rated, and the Proprietors of the PRESS, feeling the responsibility which rests upon them, and the reward which must follow the faithful performance of their trusts, will take care to afford inventors every advantage to be secured to them through a competent and responsible agency upon this coast.

A CARD.

MR. H. S. JACOBS, formerly of this State and Oregon, adopts this method of calling the attention of his old friends and customers to the fact that he has established himself permanently in the city of New York, having, since his residence in California, perfected and secured by letters patent his celebrated WHEEL MAKING MACHINERY, which not only materially reduces the cost of manufacture, but makes a much more durable and finished wheel than by the old method. These facts are simply attested by the large and increasing demand for Wheels made by this machinery, as well as by the numerous testimonials furnished by parties who have purchased and tested them. Having made large contracts for timber, selected expressly for this purpose by a gentleman who has had an experience of upwards of thirty-five years, and whose entire attention is devoted to the selection of stock connected with this branch of industry, and having had myself an experience of eleven years in manufacturing in California and Oregon, and being personally acquainted with the sizes, styles, material and wants of these States, I feel the most entire confidence in being able to supply the trade with a better and cheaper article than can be had from any other source, and in whatever quantity may be desired, having on hand at present one of the largest and best assorted stocks of Omnibus, Truck, Cart and Light Wagon Wheels, of all sizes, together with a varied assortment of Hubs, Spokes, Fellocs, Bent Rims, Shafts, Poles, etc., to be found in the country—all made under my own supervision and of the very best material and workmanship. All descriptions of well-seasoned Timber kept constantly on hand and supplied in any quantity. Orders for material of all and every kind pertaining to Wagon manufacture will be filled promptly for cash on delivery.

Address, THE JACOBS PATENT WHEEL-DRESSING MACHINE AND WHEEL COMPANY, 99 Wall street and 145 and 147 Bank street, New York.

N. B.—Those desiring peculiarity of style in Hubs, Felloes, Spokes, etc., can be accommodated, and will receive our careful attention by sending samples of the same. [20v10

NOTICE TO MINERS.

THE UNDERSIGNED WILL SELL

MINING STOCK

In Incorporated Companies and Unincorporated Mines, in San Francisco District and in El Dorado District, Arizona Territory. It is confidently asserted and believed by most practical miners that Arizona is the richest mining country in the world. Recent developments of these mines are now attracting the attention of capitalists, who have already erected several mills, and more are going there soon. Now is the time to invest to advantage, and obtain the rise that must soon follow. Those wishing to purchase soon can do so, on most liberal terms, by calling on MR. RODNEY CLARK, 338 Montgomery street (room No. 11), San Francisco, or on H. C. SKINNER, San Jose, California.

N. B.—Freight all the way by water at a cost of 4½ cents per pound.

H. C. SKINNER,
San Jose, California.

San Francisco, April 27, 1865. 17q10

1852. 1865.

Thirteenth Year of Publication.

THE GOLDEN ERA.

Founded in 1852.

The oldest Weekly Paper in the State, permanently established, and more widely circulated at home and abroad than any other on the Pacific Coast. In California, the Atlantic States, and throughout the entire field of its great and rapidly increasing circulation, THE GOLDEN ERA is universally regarded as a Literary and Family Journal of unequalled excellence. Among its contributors are all the best writers on this side of the Continent, and correspondents of distinguished ability in New York, Paris and London.

Liberal Terms to Clubs.

THE GOLDEN ERA is furnished to CLUBS at the following rates: Three Copies, one year, Ten Dollars; Five Copies, one year, Fifteen Dollars; Ten Copies, one year, Twenty five Dollars. An extra copy will be forwarded, free, for one year, to the person sending a club of five or ten subscribers.

THE GOLDEN ERA is now enlarged by the addition of eight columns to its pages—and presents fifty-six columns, containing the greatest possible variety of Valuable and Entertaining, Original and Selected Matter, all combining to render THE GOLDEN ERA a Literary and Family Journal of surpassing interest and attraction; a Welcome Guest in Cottage and Cabin; the favorite at the fireside in City and Country, the most useful, agreeable altogether desirable publication for California readers and their kindred and friends in the Atlantic States, Europe, and elsewhere. Every Household in the Mountains and Valleys, the Cities, Towns, and Mining Camps of California and throughout the Pacific States and Territories, should receive and welcome THE GOLDEN ERA as a regular weekly visitor.

Serial Romances in The Golden Era.

The most popular Novels of the present day published as Serials, from week to week, in the GOLDEN ERA, from advance sheets, simultaneously with their appearance in the English and Atlantic Periodicals.

Among the contributors to the GOLDEN ERA are all the prominent writers of Literary Repute in California and on the Pacific Coast, also correspondents and contributors of distinguished ability in the Atlantic States and Europe, comprising an array of Talent and Genius unapproached by any Literary Journal in California, the Atlantic States, or Europe.

IN THE GOLDEN ERA,

"THE FAIR LILIAS;"

Or, "LIFE IN DEATH,"

A New Story, by PIERCE EGAN, Author of "The Poor Girl," "The Flower of the Flock," "Lady Maud," "The Snake in the Grass," "Such is Life," Etc.

PIERCE EGAN is undoubtedly the most fascinating and attractive Novelist of the age. His stories are eagerly sought for, read and admired by hundreds of thousands in England and America. "THE FAIR LILIAS; or, Life in Death," surpasses, in exciting interest and thrilling situations, all of the productions of the celebrated author, and is Pierce Egan's masterpiece.

THE GREAT SERIAL,

"OUR MUTUAL FRIEND,".....By Charles Dickens.

TO ADVERTISERS.

Best Advertising Medium.—The Golden Era is the oldest Weekly Journal in California, and indisputably enjoys by far the largest circulation in the city of San Francisco and in the interior of the State.

THE GOLDEN ERA

Is universally read in every city, town, village and mining and agricultural precinct in California, and offers unusual and unequalled advantages to those who desire to bring their business prominently before the community. Only a limited space is devoted to advertising. All advertising pages are also largely occupied with fresh and interesting reading matter, and no advertisement can escape attention. The charges for advertising are not so large, proportioned to the benefits derived, as those of other papers. Liberal terms will be made with those who advertise for three or six months, or by the year.

☞ For sale by Carriers and Newsdealers. ☜

It is Impossible for editors to know ALL the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides and the evidence of any error which may appear will be received in friendship and treated with respect.

American and Foreign Patents.—Letters Patent for inventors can be secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past two years.

Favorable to Inventors.—Persons holding new inventions or machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

Payment in Advance.—This paper will not be sent to subscribers beyond the term paid for. The publishers well know that a good journal cannot be sustained on the credit system.

San Francisco:
Saturday Morning, July 8, 1865.

Removal.

The Office of the MINING AND SCIENTIFIC PRESS has been removed to the old printing stand known as Waters Bros. & Co., southwest corner of Clay and Sansome streets, opposite the Niantic Hotel (being one block south of our former location), where we may now be found, with more commodious apartments and an extensive JOB PRINTING OFFICE.

San Francisco, April 10th, 1865.

Canvassing Agents.

We would call attention to the following named agents of the MINING AND SCIENTIFIC PRESS as gentleman worthy of the countenance of any community which they may visit, and assistance rendered them in their efforts, by friends and old patrons, or our brethren of the PRESS, will be acknowledged as a personal favor to us:—

Mr. Robert Lattimore—Amador and Alpine counties and the State of Nevada.

Thos. Poyzer, of Grass Valley, for Nevada, Yuba and Sierra counties.

THE MEXICAN EMIGRATION SCHEME is undoubtedly assuming formidable proportions, and such as bode no good to Imperialists in that country. It is said that Sam. Brannan has taken $50,000 in the Mexican Loan Stock. Operations connected with the movement, though managed quietly, are said to be carried on with much energy and success.

The editor of the Stockton *Independent* has seen a letter from an old military man of San Francisco to a citizen of Stockton, stating that sometime in the month of August he and other notables of that city, whom he names, but whose names are withheld, are going to Mexico at the head of a military organization, which is to compose the "1st Regiment of California." The regiment is to be provided with two batteries of artillery, and the inducement is that it is intended as the advance guard from this State, and to test the metal of Californians against the French veterans now holding Guaymas and Mazatlan.

CARING FOR THE DISABLED SOLDIERS.—A great Fair was to have been opened at Milwaukie, last week, from which it is expected a quarter of a million of dollars will be realized. The object is to establish and endow a permanent Home for disabled Wisconsin soldiers, and will no doubt be a grand success, for the whole people of that State have been zealously preparing for it. Similar enterprises should be inaugurated in other States, until every State in the Union has a comfortable home for its disabled heroes.

A SEMI-MONTHLY line of steamers is advertised soon to commence running between Liverpool and New Orleans. Some Liverpool firms also announce the early resumption of business relations with New Orleans.

THE Government is now constructing three revenue cutters to be used on the lakes. Three more will soon be commenced, and thus the Government will soon have a nucleus for quite a little navy on the Lakes.

COTTON AND ITS MANUFACTURE IN CALIFORNIA.

An establishment for the manufacture of cotton fabric will soon be in operation in California. The machinery, which includes everything necessary for ginning, spinning and weaving cotton, is already on the ground of the intended site of the mill, at Clinton, on the San Antonio creek, Alameda county. The mill, when ready for operation, will cost about $100,000. The company will be able to manufacture sheetings, shirtings, etc., also material for flour sacks, duck for hydraulic hose, and canvas for shipping.

This enterprise is one of great public utility and importance; but to succeed, the company must be able to purchase the raw material at so low a figure as will enable them to force the imported articles of the same class out of the California market, which our people can greatly aid them in doing by giving exclusive preference to home manufactures, and thus keep the bullion in the country which now goes abroad to purchase our cotton fabrics. This has already been done in the way of sugars, and several kinds of woolen fabrics, and similar results will attend the manufacture of powder, shot, bar lead and leather.

The most important question with regard to success in this enterprise is the price at which the raw material can be purchased on this coast, as compared with its cost at the East. It has been quite fully demonstrated that this great staple can be raised in California in large quantities and of good quality. Its cultivation has already been undertaken on quite a large scale in Tulare county. According to the Visalia *Delta*, Jewett & Co., upon Kern river, have now about one hundred and forty acres in cotton. They succeeded in getting a good stand; the plants look strong and are taking a good shape to be productive, and in every essential characteristic of good cotton, excel by far the general appearance of that crop in Middle and West Tennessee, at this season of the year.

Los Angeles and San Diego are equally favorably situated for producing this staple. The climate of those counties is in every way suited to its cultivation, and is as fully as tropical as the Mexican State of Sinaloa, still further south, where its growth is beyond question. Those who have already engaged in the enterprise are deserving of much credit for their energy and faith, and it is hoped that they may meet with such success as will induce many others to embark in similar undertakings. It is only from the home productions of the staple that cotton manufactories can succeed in California. We have the soil and climate to perfection in the lower portion of the State, and Mexican and Chinese labor can be had there in abundance, and at rates quite as cheap as labor can be obtained on the cotton fields of the Atlantic States. Let our people prepare to embark freely in the enterprise another year. It will pay, and will keep millions of dollars, per annum, in circulation here that would otherwise go East for the products of Southern lands and Northern looms.

RICH DISCOVERIES NEAR SALT LAKE.—Much excitement exists at the present time in Salt Lake about some remarkably rich discoveries of gold and silver mines, reported as having been made in Snake Creek Cañon, Provo Valley, forty or fifty miles southeast of that city. According to the *Vedette*, merchants left their stores; mechanics left their workshops; Gentiles left their business, and Mormons their broad fields. Everybody, almost, who had a horse to go on, or a livery team to get, started for the new El Dorado.

TREASURE EXPORTS.—The amount of treasure shipped from this port during the first half of the present year was $21,004,496; being $7,989,214 less than the amount exported during the same time in 1864. Nearly four millions—almost one-fifth—of the amount shipped went to China.

THE pyrotechnical exhibition at Sacramento, on the Fourth of July, took place from barges moored in the river.

OIL WELLS AND OIL WELL BORING AT THE EAST.

It is said that not less than sixty inventions have been patented within the past three or four years for various supposed improved devices in boring oil wells. It is also said that several of the more recent and promising of these inventions are about to be put to practical tests by various companies possessing ample pecuniary means. We shall endeavor to keep posted with regard to all improvements in this direction, and whenever any experiments have satisfactorily demonstrated that anything better than the common drill, with the ordinary mode of working the same, has been devised, we shall lose no time in laying the matter fully before our readers. The business of mining for oil is beyond a doubt yet in its infancy, and much will doubtless yet be learned; but it is not worth the while of Californians to spend any money in experiments while so much is being done in that direction by practical operators at the East. Let us wait and learn.

The Oil City *Register*, in alluding to the stoppage of flow in many wells once productive, says:

We are among those who entertain the opinion that the petroleum supply is practically inexhaustible. The stoppage or failure of wells to yield an unbroken, steady supply, can be accounted for in many ways. We have seen tubing of oil wells that became packed so tight with paraffine that all the power of the gas failed to force the oil through. In such case the paraffine had to be removed, which being done, the well was as good as ever. The paraffine we saw taken from the tubing was about of the same consistency as lard. We think it certainly reasonable to suppose that the crevices in the earth through which the oil is forced become clogged or stopped up in the same manner as the tubing we have alluded to. Very frequently, in removing the tubing for the purpose of changing the location of the seed-bag, which is used to cut off the water, a quantity of gravel and sand is dislodged, and falling to the bottom, has the tendency to materially assist in filling up the crevice or crevices.

But the most frequent reason for the stoppage of wells is that of boring so many wells within a small space of territory. The same disposition exists among oil miners as in the old lady who had the goose that laid the golden egg. We know of several instances wherein parties owning a lease of a single acre, upon which was a good well, concluded to bore another, and by this means have spoiled both wells and rendered them imperative. In order to fully comprehend our meaning, the reader not conversant with the subject will understand that the main supply of oil is at the depth of about five hundred feet from the surface of the earth. This depth varies in different localities, the parties operating upon Cherry run and the Allegheny river having generally to sink their wells to the depth of from 600 to 650 feet before striking the third sandstone that overlies the largest deposits that have yet been found. In boring a well, frequent water courses beneath the earth's surface are met with. These are seldom found below the depth of 150 to 200 feet. To prevent this water from going down, which would prevent the oil from coming up, as well as to keep the gas from escaping, the seed-bag is used. This is a bag made of stout leather, partially filled with flax-seed, tied at both ends around the outside of the tubing. Upon getting moist, the flax-seed swells, and the bag is caused by the expansion to fit the hole tight, preventing the escape of the gas and the ingress of water below the seed-bag. Being thus confined, with no mode of escape, save through the tubing put in the well, the gas furnishes the motive power to lift the oil to the earth's surface.

It has been the general custom, heretofore, to abandon every well that was unsuccessful, or that failed to meet the expectations of its sanguine owner. These not being tubed, or the water cut off, allowed the gas to escape, and water pouring down, forced the oil into other channels. The escape of the gas had the same effect upon the wells adjacent that a leak in the boiler would have to the working of a steam engine. The number of wells thus abandoned can be numbered by the hundred. It happens, not unfrequently too, that parties will operate in order to stop a productive well, and, if successful, inflict great, and often irreparable injury, to the interests of perhaps half a score of others, and even then fail to be materially benefitted.

With such an utter waste of the forces that nature designed to play so important a part in the production of petroleum, is it any wonder that large flowing wells are no longer struck? It is rather wonderful to us that any oil at all should be forced to the surface of the earth, save the small quantity lifted by the wheezing, ricketty pumping apparatus now used.

The remedy to apply is exceedingly simple, and many companies are applying it as fast as possible. It is to tube these abandoned wells, or rather take a sucker rod, which is the cheapest mode, and by use of the seed-bag shut off the water and prevent the gas from escaping. By thus closing up four-fifths of the wells the other fifth will prove productive and give a steady yield for an indefinite period. In proof of the efficiency of this plan, we cite the Clapp farm, on Oil Creek. The owners of this farm commenced tubing the abandoned wells, of which there were a great many on their lands, some time since, just as fast as they were forfeited. The result has been a perfect success, and the Clapp farm now exhibits an increase in production of over 700 per cent.—all owing to the exercise of common prudence. We can cite other instances where the same plan has been in like manner highly successful. As the advantages thus presented are so palpable, it is strange that any well should be allowed to remain in a state calculated to work irreparable injury to the interests of all the parties concerned.

We have thus cited some of the reasons for the stoppage of oil wells and their short-lived productiveness. Those not conversant with these facts have good cause to be timid in regard to making investments. But the prospect is now more cheering. Those owning oil lands make it obligatory upon the lessees to stop up their wells in case they are abandoned, and also regulate the length of time for which the tubing of any well can be removed. For when the tubing of one well is removed, frequently half a dozen others in the immediate vicinity are flooded, and temporarily if not permanently injured. It is true that the water can be pumped out at great labor and expense, but the loss of the gas, or motive powers, so indispensable to production, is irreparable.

With the help of improved machinery to remedy and apply to causes we have stated, and the exercise of a proper degree of economy in husbanding the forces which nature has supplied to assist us in obtaining one of her most bountiful as well as most useful productions, the supply will certainly be sufficient to meet all the demands that are made upon it, while if the loose and careless plan of former years continues, it is very probable that in a short time the petroleum supply will become insignificant—in other words, petroleum, as a business, will be "played out."

TREASON TRIALS.—Jeff. Davis's approaching trial for treason will eclipse in interest the only other great trial for the same crime that this country has seen—when Chief Justice Marshall sat upon the Bench, Aaron Burr was in the prisoner's dock, John Randolph was foreman in the jury-box, William Wirt was the Prosecuting Attorney, Luther Martin was the prisoner's counsel, Andrew Jackson was one of the witnesses, and General Scott, Commodore Truxton and Washington Irving were among the spectators.

THE WATER OF MONO LAKE.—A recent analysis of an eight-pound gallon of this water contained 1,200 grains of solid matter, which consisted principally of chloride of sodium (common salt), carbonate of soda, borax, sulphate of soda (glauber salt) and silica. The water also gave unmistakable indications of sulphuretted hydrogen.

DECAY OF NATIONS.—Along the pathway of the world's history lie scattered the ruins of thrones and empires, as human bones are left to bleach along the thoroughfares of pagan pilgrimage; an epitaph is uttered by the eternal silence and desolation that reigns over them. "They would not heed truth, and justice, and humanity, and have perished from the earth! These would have made them great, and happy, and immortal!"

THERE are few things more curious in horticulture than the occasional variations of a shoot or branch from the regular character of the parent plant. If these shoots are cut off and induced to send out roots of their own, or, if buds or grafts be taken from them, and secured to something else, they retain all their peculiarities, and become as a new variety as is obtained from seed.

A STATE GEOLOGIST.—It is said that the Secretary of State for Nevada has appointed R. H. Stretch State Geologist, in accordance with the provisions of the Act passed by the Legislature of that State, last winter.

PRESIDENT JOHNSON was the original author and for many years almost the sole champion in Congress of the Homestead law, under which every man can become the owner of a home without money and without price.

VOLUME ELEVEN.

The Mining and Scientific Press to-day enters upon its eleventh volume. What it has been and what it now is, its columns, past and present, attest; what it may he in the future depends upon what its readers and patrons may see fit to enable us to make it. It is by no means the paper which we desire it should be, or such a one as the magnibcent interests which it represents should possess; yet it is all that its present patronege will support. We do not write thus from any feeling of discouragement, or because we have not reached the point which we had expected to reach at the present time. On the contrsry our most ssnguine expectations have been more than realized. It has been onr eim to supply substantial and valuable reeding metter, such as shall instruct rather than interest. We have lahored to make a useful journal—we know we have made a permanent one. We are under many ohligations to correspondents who have greatly facilitated our editorinl labors by their contributions on the various specialities to which onr colnmns are devoted. We would also take this occasion to express thanks for tbe numerous favors of friends who have interested themselves in increasing the circulation of the paper, and in otherwise securing business towards its support. We trust they will still continuo their kindly offices. Our readers can do much towards increasing the circulation of the Press, snd in so doing they will enable us to do all the more for their instruction, by giving additional value to its columns. In thus looking back upon the pnst, and casting a hopeful thonght into the future, it is not necessary that we sbould pause to confess editorial sbort-comings. The older we grow, the more we see to learn. In our efforts to inform and instruct onr readers, the reflex influences is perhaps tbe greater. Wo trust that influeuce will be cumulative on our part, to the end that we may from week to week be the better able to fulfill our task. Mindful of the past and hopeful for the futnre we pess on to complete another volume of tbe Press.

Letter from Scotland.

Bathoate Chemical Works,
Scotland, May 11th, 1865.

Editors Mining and Scientific Press:—In your journal of February 25th, 1865, there occnrs the following words: "Soon after Mr. Cherry came to this State to secure the means to return and carry out his ideas of producing an illuminating oil from coal and crude petroleum. Having accomplished this purpose, be returned in 1854, visited the various coal districts in the United States, went to England, had further and protracted interviews with his former friend and co-investigator, Mr. Young, who had then associated with himself Mr. Mansfield"—and as I fear I may be the Mr. Young alluded to, and the statement become bad history, I beg space to state tbat I never was associated in any way, or ever saw the face of either Mr. Cherry or Mr. Mansfield. I am, sir, yours respectfully,

James Young.

P. S.—It is likely the matter referred to ahove hes heen already corrected—if so, all right; if not, please obligc me by inserting my notc. In your paper I see a letter signed Thomas Rowlandson. I believe he is an old friend of mino, and as I do not know his address, I have taken the liberty to enclose a note, and shall trust to your goodness to send it to him. J. Y.

Remarks.—We are pleased to note the circulation of our paper is such that an error located at any distance is bound to attract attention and return for rectification. Wc published the paragraph alluded to on the authority of a mcmber of Mr. Cherry's family. That is all we know about it. We are obliged to Mr. Youug for sending his statement, as it may prove to be of service to othcrs. The writer of the above letter is the gentlemau who first secured, by letters patent, the discovery of the process of obtaining oil from coal hy slow distillatiou, at low heat; and from which he has realized a fortune, which rumor has set down at not less than five millions of dollars.

Mining Summary.

CALIFORNIA.

The mining interest in California appears to be decidedly improving, and this notwithstanding there hss heen a marked decrease in tbe treasure shipments for the past six montbs, as compared with the same period last year. The gold receipts at the mint, from that time, from the California mines, have not been so lsrge during any similar period for several years. This improvement is clearly due to the increased attention which is now being paid to working our gold-bearing quartz veins. There has been a large increase in the number and efficiency of our mills, the present season, and the moneyed men of the East are rapidly gaining confidence in the value and permanency of our mines. Numerous investments have been made within the past few months in the mines of Nevsda county; while large purchases have also been made in various other portions of the State. The idea that our quartz veins will give out during the present century is now pretty well abandoned, and the earnest and persistent blows of industry, aided by willing capital, are making rapid inronds into the locks and bars of nature, which stand between man and tbe coveted mineral.

The copper interest is nlso rapidly developing itself into a productive and paying industry. The operetion of smelting, although not fully through its experimental period, is nevertheless making rapid progress, and there is good reason to believe that we shall yet behold it as mucb a success in California as in Swansea. The advocates of cheap food then will eventnally be fully counterhalanced by the increased percentage of the ore obtainable here. As yet, however, the chief portion of our ore finds its way abroad, and hundreds of tons are brought down the San Joaquin for shipment every week. The mines about Copperopolis, and beyond, are turning out better than ever. From Plumas county we also bear good reports. The Cosmopolitan Co., of Genesee Valley, have made arrangements with Messrs. Shields and McClellan to put up smelting furnaces capahle of reducing twenty tons of copper ore every twenty-four hours. The works will be in operatiou tbe comiug fall.

WASHOE.

Copper appears to be attracting considerable attention in Wasboe at this time. Small lots of very rich copper ore are constantly being hrought in from various directions, and it is found tbat nearly all of these contain a considerable amount of gold and silver.

The Gold Hill *News* learns that Treglone & Co., formerly proprietors of the Swansea mill, have purchased the Apple and Bates claim, in Gold Hill proper. This claim consists of thirty-one and a half feet of ground lying next north of the Imperial Company's claim. The miue bas not been worked since the cave last winter, when the shaft was closed up until the new owners took charge a few days ago. Treglone & Co. will put up good substantial machinery and havo the shaft repaired, and be ready to work tbeir rich ledge in a short time.

The Silver Wave ledge, in Mountain Wells district, has been sold to a New York company, who are now erecting a mill for crushing the ore, which is considered very rich.

According to the *Enterprise*, the Ophir company is now daily shipping from the mine thirty-five tons of ore. Of this amount ten tons per day are sent to Fall's mill, Washoe Valley, and yields at the rate of $200 per ton. The remainder is sent to mills on the Carson, at Empire City, and yields about $60 per ton.

The Burning Moscow, of which little bas been heard, according to the *Union*, is about to take its place on the dividend list. Fourteen and a half tons of rock from this mine recently yielded $1,077, or about $70 per ton. The rock was worked in the company's mill, which has recently been erected, with four stamps and Hepburn pans. The mill is pronounced a very fine one for close work. The *Union* says that enough ore of the same class with the above is in sight to last tbe mill of the company at least one year. Mr. A. H. Lissack is Superintendent of the whole works, and has unbounded confidence in tbe mine. Owing to the fact tbat a law-suit is now in progress—or about to be commenced—between this company and the Ophir, it is not likely that more ore will be crushed until after the dispute between the two companies is settled.

Twenty tons of ore crushed at the new mill in Desert district, yielded bullion to the value of $3,000. This result is most satisfactory, and all hands, millmen and miners, will now wade into tbe wealth of the district in good square earnest.

Work is about to he commenced on some of the leading claims in Flowery district. Much confidence is expressed as to the ultimate value of the mines in this district.

The Washoe United Consolideted Gold and Silver Mining, more generally known as the English Company, have completed their magnibcent canal, three and one-half miles in length, and conducted the water of the Truckee through it to their new mill, which is nearly completed. It is said that the company have already investcd $250,000. This is one of tbe heaviest mining enterprises ever undertaken on the Pacific Coast.

The new mill now in course of construction at Dayton for Messrs. Birdsall and Carpenter, under the supervision of Mr. Morgan, is progressing rapidly towards completion.

From the new Truckee mines most favorable reports are being daily received, for not only is the new road being pushed ahend, but the ditch will at once be built, and several mills erected. At Washoe, Ophir and Franktown, affairs are prosperous, and all Weshoe county was never more flourishing.

Recent developments in the coal district on the Truckee show that a very large stratum of fine coal exists at a greater depth than any yet mined. The artesian borer has been put in place, and in a few weeks will be down ten hundred feet. By boring tbey expect to find new seams below the one upon which they have been at work. The seams they have been prospecting afford an excellent article of coal.

REESE RIVER.

Judging from the daily reports in the *Reveille*, we should suppose that there was of late quite an increased degree of activity being exhibited in that locality. We condense from that paper as follows:

The statistics of the Social company's mill for some eight or ten weeks make a most excellent exhibit. The mill, which consists of five stamps, with three pans, working five hands only, has turned out, in sixty-two working days, bullion to the amount of $21,000. The bullion assays $1.42 per ounce—giving seventeen cents of gold. The works are under the charge of Mr. John P. Dougherty, superintendent, and the manner in which they are conducted is highly creditable to his judgment and energy.

Work on the Whitlach mine is about to be resumed. Some time since, while the workmen were taking out ore from an eight-foot vein, worth over $150 to the ton, a large dyke, composed of porphyry and clay, was unexpectedly encountered, which cut the vein completely across at an oblique angle. The end of the fractured vein was found to be as smooth as if it had been cut and polished by a lapidary. Some $25,000 was expended in looking for a continuance of the vein, without success, when the work was temporarily suspended and the sum of $12,000 offered to any one who would re-discover it. Some time since, while Dr. C. T. Jackson was at Reese River, he was called upon to examine the mine, which, as we understand, resulted in advising a change in the mode of search, under which advice work is about to be egain resumed.

The Union mine, situated on the lower grade, has been sold to Major Clymer, who is the proprietor of large iron works in the State of Pennsylvania. It is the intention of the present proprietors to put the mill in working order at once, and to resume the reductiou of ore.

Four mines located in and around Marshal cañon, and known as the Falmouth, Delaware, Montour and Carthage, have been sold to certain parties in New York for the sum of $30,000. These claims were undeveloped. Tbe agent who made tbe purchase had personally inspected tbe mines, and obtained assays of the ore procured from each.

The Santa Clara, one of the oldest localities in Reese River, is being opened by an incline, which is now down 150 feet, with a vein of from six to eighteen thick, exhibiting chloride ore, apparently rich. Sulphurets will probably soon be reached.

Active operations are now in progress upon tbe Chicago ledge, on Oregon Hill, by the proprietors, Messrs. Plumhoff, Martin and Shay. They are sinking an incline, and have taken out ore which has yielded hy mill process as high as $250 per ton.

Tbe Remmington ledge, also upon Oregon Hill, has recently heen purchased hy New York parties, who are putting down an incline under the direction of Mr. Curtis. They are now down 150 feet. Ore from this ledge has yielded as high as $200 to the ton by working process. Chloride has been taken out which yielded as high as $1,000.

In Yankee Blade Camp, work is being vigorously prosecnted on the principal mines. The Confidence company, the Maggie and the Whitlach Yankee Blade are all working, and furnish employment to a large nnmber of mechanics and laborers.

The Mills and Lehigh companies, in San Francisco cañon, have united for prospecting purposes, and are down 115 feet with an incline, at which depth they have opened a well-defined vein, which has yielded, by mill process, $145 to the ton

HUMBOLDT.

Considerable excitement has recently grown out of a somewhat remerkable discovery in Sacramento district. This discovery is known as the Montana ledge and is located abont sixteen miles south west from Unionville, and in the immediate neighborhood of the Bullion ledge, a portion of which has recently been purchased by Ex-Governor Bigler, for a Philadelphia company, as noticed in our issue of the 10th instant. The Montana, as its name imports, is a little mountain of quartz, cropping out about twenty-five feet in thickness and from twenty to thirty feet above the surface, and continuous for full 500 feet in length. It is thought to be one mass of silver ore, such as will yield $50 per ton for the entire ledge. One half of the original location has been sold to Mr. A. Stevenson, agent of a New York company, who designs to erect forthwith a 20-stamp mill, and put the vein at once into good working order. The mill will be put up on the Humboldt river, from which the mine is distant but six miles, with an easy down grade the entire distance. The *Register* thinks this will prove the most important discovery yet made in the State.

The Bullion series of ledges continues to he highly spoken of; it is not yet fully determined hy Gov. Bigler whether he will build his mill at the mine or on the river, six miles distant. A thousand pounds of ore from one of the ledges yielded, by working process, about $50, which amount would have been materially increased by roasting.

Mr. Stevenson, the same gentleman mentioned above as having purchased an interest in the Montana, is now making arrangements to put up a mill on the Ætna mine, the machinery for which is now on its way thither. This mill will be erected at a point which will make it convenient for use as a custom mill.

A lot of 100 pounds of ore from a new ledge recently discovered near Holt's mill, yielded at the rate of $1,400 to the ton. A further test will soon be made with a larger quantity.

The proprietors of the Monroe Series are getting ont a lot of ore from these ledges, which they will take to Fall's mill for crushing. This ore is highly auriferous, and the proprietors have paid living expenses the past winter by crushing selected rock from it in a hand mortar.

A Flowing Oil Well.—Capt. Smith, of the barque Jeanette, which arrived at this port last evening, thirty-six hours from Humboldt, reports to the *Call* of this morning that the Union Mattole Company struck flowing oil in their well five days since. The oil is said to flow over the top of the well in such quantities tbat the workmen, finding it impossible to preserve it, were obliged to plug up the well to prevent it from running to waste. The report is considered perfectly reliable by the officers and members of the company in this city. We trust it may he true in every particnlar.

St. Ignatius College.—We have received the prospectus of St. Ignatius College, of this city, which also contains a catalogue of the officers and students for the academic year of 1864-'65, together with the distribution of the premiums for the 6th annual commencement, held on the 31st ult. The total number of students in the catalogue is 485. The school will re-open for the preparatory class on the 24th instant; for the grammar and higher classes, on the 21st of August.

Dick Morgan, a brother of the ex-rebel leader John Morgan, has been sentenced to the Illinois peuitentiary for life.

Satire should not be like a saw, but a sword; it should cut, but not mangle.

THE CALIFORNIA TEACHER for July has been received. It contains the July semi-annual apportionment of the school fund, from which we perceive that the total number of white children in the State, between four and eighteen years of age, residing in school districts where public schools have been maintained for three months, during the year ending August 31, 1864, is 86,575. The appropriation is seventy-seven cents each for the six months, making a total of $66,662 75. This valuable periodical appears to be meeting with very good success. It is now made the official school journal of the State of Nevada as well as of California.

SANTA CLARA COLLEGE.—We have received the prospectus of the Santa Clara College, of San Jose, containing a catalogue of the officers and students for 1864-'65; also the exercises of the 14th annual commencement, and the distribution of premiums. A brief notice of this institution and its recent commencement exercises will be found in the letter of our San Jose correspondent, which appears in another column of the present issue. The total number of students connected with the Institution is 184. Its next term will commence on the 28th of August, 1865.

REMOVAL.—The office of the Open Sesame G., S. & C. Company, T. L. Bibbins Secretary, has been removed to 605 Clay street. We understand that active operations are about to be resumed upon this mine.

MECHANICS' FAIR.

DAILY PRESS.

The Proprietors of the MINING AND SCIENTIFIC PRESS having been granted the privilege of printing the DAILY PRESS at the Pavilion, during the approaching Exhibition, are making complete arrangements to publish a full and faithful record of the Grand Exhibition, and will present gratuitously to all visitors and exhibitors the LARGEST, most ATTRACTIVE and VALUABLE paper ever issued at a public fair.

Its Free and Extensive Circulation

will render it a peculiarly desirable journal for advertising. From SEVEN TO EIGHT THOUSAND individuals visited the exhibition last season in a single day and evening.

Our printing press, in active operation, rapidly throwing off an interesting sheet into the very hands of the anxious throng, presents an attractive scene, affording one of the most novel and effective modes of advertising ever offered through the columns of a newspaper. Many persons being eye-witnesses to the printing of the paper, preserve copies as reminiscences of their visit to the Fair, while others procure bound volumes to be retained as a permanent record of the Exhibition, giving a further benefit to advertisers in addition to its wide circulation.

Those wishing to secure space for advertising in the MECHANICS' FAIR DAILY PRESS, will do well to make early application to the proprietors.

DEWEY & CO.,

Patent Agents, Publishers of the Mining and Scientific Press, and Job Printers, 505 Clay street, San Francisco.

U. S. 7-30 LOAN.

By authority of the Secretary of the Treasury, the undersigned has assumed the General Subscription Agency for the sale of United States Treasury Notes, bearing seven and three-tenths per cent. interest per annum, known as the

SEVEN-THIRTY LOAN.

These Notes are issued under date June 16th, 1865, and are payable three years from that time in currency, or are convertible, at the option of the holder, into

U. S. 5-20 Six Per Cent.

GOLD BEARING BONDS.

These Bonds are now worth a premium of nine per cent. including gold interest from November, which makes the actual profit on the 7-30 loan, at current rates, including interest, about ten per cent. per annum, besides its EXEMPTION FROM STATE AND MUNICIPAL TAXATION, WHICH ADDS FROM ONE TO THREE PER CENT. MORE, according to the rate levied on other property. The interest is payable in currency, semi-annually, by coupons attached to each note, which may be cut off and sold to any bank or banker.

The interest amounts to

One cent per day on a $50 note,
Two cents per day on a $100 note,
Ten cents per day on a $500 note,
Twenty cents per day on a $1,000 note,
One dollar per day on a $5,000 note.

Notes of all the denominations named will be promptly furnished upon receipt of subscription. This is

The only Loan in Market

now offered by the Government, and it is confidently expected that its superior advantages will make it

THE GREAT POPULAR LOAN OF THE PEOPLE.

Less than $300,000,000 of the loan authorized by the last Congress is now on the market.

This amount, at the rate at which it is being absorbed, will all be subscribed for within four months, when the notes will undoubtedly command a premium, as has uniformly been the case on closing the subscriptions to other Loans.

In order that citizens of every town and section of the country may be afforded facilities for taking the Loan, the National Bank, State Banks, and Private Bankers throughout the country have generally agreed to receive subscriptions at par. Subscribers will select their own agents, in whom they have confidence, and who only are to be responsible for the delivery of the notes for which they receive orders.

JAY COOKE,
Subscription Agent, Philadelphia.

March 25, 1865. 17v1[U.S.]m

ADDENDUM.

PER OVERLAND TELEGRAPH:

PHILADELPHIA, May 17, 1865

Second Series all sold. Commenced on Third Series. Two Hundred and Thirty Millions ($230,000,000) precisely like other two Series, except dated 15th July, and Government reserves the right to pay six per cent. in Gold instead of 7-30 Currency.

JAY COOKE,
Subscription Agent, Philadelphia.

MEXICAN

TEN PER CENT.

SIX YEAR LOAN.

The undersigned, having a full Power of Attorney from Gen. GASPAR SANCHEZ OCHOA, Commissioner for the REPUBLIC OF MEXICO, as Agent for the sale of the Bonds of this

POPULAR LOAN,

These Bonds will be sold at

Fifty Cents on the Dollar, Gold Coin.

They bear date July 1st, 1865, and are now ready to be furnished in sums to suit, in denominations from $50 to $1,000.

The principal and interest are payable in United States gold coin.

Interest payable semi-annually at the PACIFIC BANK, in the city of San Francisco.

The payment and redemption of these Bonds and Coupons are secured by the transfer to the undersigned, as Trustee, of one-half of the fiscal proceeds of all the

Revenues and Duties

Derived from the Custom Houses of

MAZATLAN,

GUAYMAS,

MANZANILLO,

And all the Ports in the States of

Sinaloa, Sonora and Colima,

AND FROM THE MINES OF SAID STATES,

Which Revenues and Duties, so soon as collected, are to be deposited and held by the undersigned in the

Pacific Bank, San Francisco,

And employed exclusively for the payment of said

BONDS AND INTEREST.

General OCHOA has made an assignment to the undersigned of one-half of all the duties received at the above Custom Houses, for the payment of said Loan and Interest, and also to appoint Agents to receive the above Revenues.

☞ SUBSCRIPTION BOOKS are now open at our Office, Room No. 3, third floor, Masonic Building, No. 420 MONTGOMERY STREET, San Francisco.

MINING LAWS AND FORMS.

Third Edition revised and enlarged.

Compiled by H. H. CONGDON.

THIS Edition contains all the laws of the *STATE OF CALIFORNIA* and *NEVADA TERRITORY*, relative to Mining Corporations together with the Mining Ordinances of Mexico, complete; Digest of Decisions of the Supreme Court; Forms etc. 16 mo. flexible cloth, 192 pp. $2.50.

Published by H. H. BANCROFT & CO.

COMPLIMENTARY.—The London *Times* is profuse with compliments to both belligerents: The civil war need only live in national memory as a grand struggle in which the heroism and endurance of all classes of Americans astonished the world. Neither belligerent need be ashamed of the retrospect. Federals and Confederates alike had maintained larger armies, and fought more desperate battles than any other people. If the South had done more with smaller means, the North had borne up with incredible tenacity against discomfiture and discouragement, and had outstripped imagination by the magnitude of its efforts.

AN OIL CITY.—The City of Erie, Pa., seems to be located over an oil cistern. Wells have been sunk in some of the streets and on vacant lots, from which the oil is pumped out in large quantities.

EDITORIAL CHANGE.—Hon. W. H. Sears, Speaker of the last Assembly, has purchased the Nevada *Gazette* and editorial control of that paper.

A LARGE DITCH.—A ditch sixteen miles long, seventeen feet wide at the top, and running water enough to irrigate three thousand acres of land, has just been finished from the Truckee river to Steamboat Valley, Nevada.

THE PACIFIC IRON WORKS,

First & Fremont Sts., between Mission & Howard, San Francisco.

The proprietors of the above Works invite the attention of all parties interested to their greatly improved and unequaled facilities for manufacturing Steam Engines and Boilers, both Marine and Stationary, of any required size and pattern, Quartz Mills, Amalgamating, Pumping and Hoisting machinery of the most approved construction, Flour, Saw and Sugar Mills, Water Wheels, &c., &c. Our pattern list is most complete and extensive, embracing the late improvements in all classes of machinery adapted to use on this coast. We would call especial attention to the fact that we have secured the exclusive right of manufacture for the Pacific Coast of the celebrated Greene Engine, conceded to be the most economical and perfect working Engine now in use. We are also exclusive manufacturers of the celebrated

Bryan Battery, Varney's Amalgamators and Separators, Ryerson's Superheated Steam Amalgamators and Rotary Crushers, Stone Breakers, &c. Orders respectfully solicited.

E. T. STEEN.
39 and 41 Fremont, and 42 and 44 Beale Sts.,
SAN FRANCISCO. 21v9tfq

BRICK VS. IRON.—The late conflagration in Richmond developed a curious fact. Some week or ten days after the fire, the iron safe of the *Enquirer* office was opened, when immediately on the admission of the air the books and papers were ignited and consumed. And such was the case of all other safes which were not in brick vaults. In these the contents were uninjured, The *Enquirer* safe, at the time it was re-opened, was cold, externally, to the touch.

DEATH OF BISHOP POTTER.—The Right Rev. Alonzo Potter, Bishop of Pennsylvania, died at 10 o'clock A. M, on the 4th inst., on board the steamer *Colorado*, lying in this harbor. Bishop Potter, accompanied by his lady, made the voyage around Cape Horn as passengers on the *Colorado*, and maintained excellent health until arriving off Cape St. Lucas, where the Bishop was seized with an attack of the Mexican Coast fever, which terminated fatally, as above stated, in the sixty-fifth year of his age.

A FINE CABINET.—Capt. J. M. Aiken, of Coulterville, Cal., is the possessor of a beautifully constructed cabinet, formed of seven different kinds of California wood, and containing four hundred phials of one hundred and thirty different minerals, including quartz and placer gold, silver, coal, several petrifactions, California agate from the Merced cinnabar, nickel, lead, copper, etc., and all collected in this State.

ENGLISH sportsmen are beginning to name their race-horses after the famous battle-fields of our civil war. Among the favorites we find those of Chattanooga, Richmond and Antietam.

IT is said that rose bugs will resort to the flowers of rhubarb in preference to any other plant, and that consequently grapes, etc., may be saved from their ravages by planting rhubarb among the vines.

THE BEST BOOK

—FOR—

MINERS, PROSPECTORS AND MILLMEN.

Nevada & California Processes

—OF—

SILVER AND GOLD

EXTRACTION,

For General Use,

BY GIUDO KÜSTEL,

Mining Engineer and Metallurgist—Formerly of the Ophir Works,

IN ONE HANDSOME OCTAVO VOLUME.

SYNOPSIS OF THE WORK.

PART FIRST.

Chapter 1st—Treats of the methods of recognizing silver and gold ores, and contains a "Systematic Proceeding" for their determination by blowpipe analysis readily learned and practised, and is a reliable and accurate guide.

Chapter 2d—Is a description of gold and silver ores, describing many interesting occurrences in minerals belonging to the Comstock, Gold Hill, Humboldt, and Arizona Mining Districts.

Chapter 3d—Describes the requisites and approved methods for testing and assaying—with illustrations.

Chapter 4th—Speaks chiefly of the extraction of gold, especially the amalgamation treatment of ores in batteries, pans and arrastras; and also the extraction of gold by chlorination.

Chapter 5th—Is replete with valuable information on the extraction of silver, including divisions of processes employed. The behavior of chemicals by the wet process; the same when calcined—with valuable hints to attendants roasting ores. Full description for the cold and melting processes, etc.

Chapter 6th—Makes mention of the most modern utensils and machinery, such as pans, agitators, furnaces, etc., with comprehensive diagrams.

PART SECOND.

ON GENERAL METALLURGY.

Chapter 1st—Treats of many species of argentiferous ores; the dry assays of rich and poor ores; also, the same by the humid and dry methods.

Chapter 2d—Presents a clear and comprehensive description of the extraction of silver either by melting or amalgamating process—its dissolution and final precipitation—with divisions of the principal modes of extraction employed.

Chapter 3d—This last chapter gives full and precise formulas for the extraction of the metals in the dry way; the various modes employed in Europe and South America.

The "Amalgamation in pans" with chemicals, or dry method by calcination or roasting ores, forms the most valuable portion of the work; the same being thoroughly and distinctly described and explained, and particularly designed for the treatment of ores in Lower California, Arizona, Mexico, and other mining districts where argentiferous lead ores abound. No less valuable and important are the practical descriptions and illustrations of cupellation and refining of silver, and concentration of the same in lead, by the Pattinson and other processes.

This Work is invaluable to Prospectors, Miners, Metallurgists and Mill-men throughout the Pacific States, containing valuable formulas for the treatment of ores and minerals, expressly prepared in an authentic manner and a plainly written style, for persons engaged in mills in California, Washoe, Lower California, etc. It is also valuable to prospectors and miners unacquainted with mineralogy, having a full and clear chapter on Blowpipe Assays and Tests.

WHEELER & RANDALL

Grinder and Amalgamator.

In the engraving on the opposite page, A represents the Rim of the Pan; B, Cross Frame; C, Legs; D, Gear; G, Driving Pulley; H, Muller; I, Driver; K, Dies; L, Shoes; M, Hand Wheel; N, Jam Nut, and O, Wings or Guide Plates.

The attention of the Public is respectfully called to these facts:

1st. That the Mechanical work accomplished by differently formed grinding plates, having the same diameter, weight, hardness, and revolving at the same velocity, is as follows, to wit:

The Mechanical Work of plane, circular plates of the usual ring form, is ninety-eight.....98

The Mechanical work of conical plates of the most approved form, is one hundred and ten.....110

The Mechanical work of Tractory-formed plates, as introduced in the invention of Wheeler & Randall, is one hundred and seventy-seven.....177

That is, the Tractory-formed grinding plates will reduce one hundred and seventy-seven tons of ore, the conical grinding plates one hundred and ten tons, and the plane circular grinding plates ninety-eight tons, to the same degree of fineness in the same time. Those using this invention certify that they thoroughly reduce five tons of ore, as it ordinarily comes from the wet battery, per day in each pan, four feet diameter, the muller making sixty-five revolutions per minute.

2d. That as a whole, the Wheeler & Randall Grinder and Amalgamator is one of the most simple, compact, substantial, convenient and efficient pans in use.

☞ Patent applied for.

MANUFACTURED AT

GOLDEN STATE IRON WORKS.....San Francisco.
UNION IRON WORKS..... "

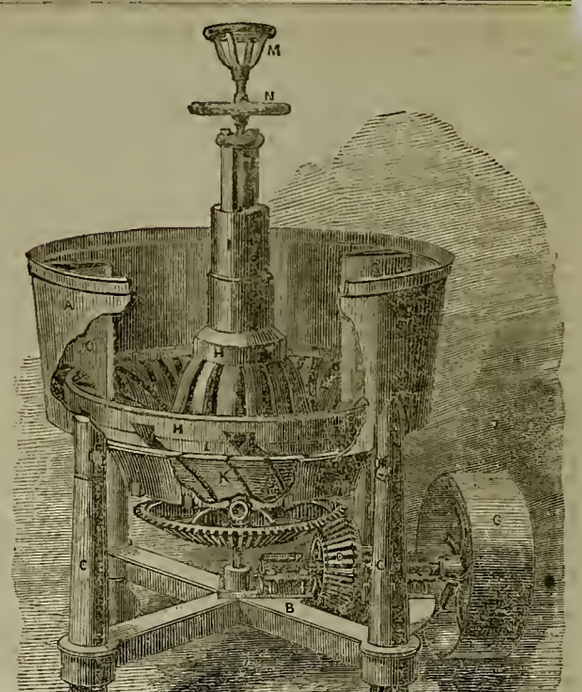
PRESCOTT & SCHEIDEL.....Marysville.
OREGON IRON WORKS.....Portland, Oregon.

WHEELER & RANDALL, Inventors.

SAN FRANCISCO, JUNE 13, 1865.



THE EXCELSIOR

GRINDER AND AMALGAMATOR.

In the engraving on the opposite page, A represents the Rim of the Pan; B, Muller; C, Legs; D, Cross-Frame; E, Gearing; F, Screw; G, Lever; H, Dash-Boards; I, Key; *a*, Dies; *c*, Shoes, and o, Openings.

The relative grinding capacities of "The Excelsior" Grinder and Amalgamator, of the Flat Bottomed Pan, and of the Conical Pan *when properly constructed*, are respectively 177, 98 and 110.

That is, the respective mullers being of the same diameter, same weight, same hardness, and running at the same velocity, "The Excelsior Grinder and Amalgamator" will reduce one hundred and seventy-seven tons of ore, the Flat Bottomed Pan ninety-eight tons, and the Conical Pan one hundred and ten tons to the same degree of fineness in the same time.

The wear to the Shoes and Dies at their grinding surfaces in the Excelsior Grinder and Amalgamator, is perfectly uniform, thus securing exceeding reduction to the pulp, as well as steadiness of motion to the muller. Uniform wear of the grinding plates has been attained in no other than that of the Tractory form—nor can it be.

Another property of excellence in this machine is that the metal or substance to be amalgamated passes *direct* from the grinding surfaces into the quicksilver; thus excluding the possibility of its becoming coated with any foreign substances, after having been burnished. It is truthfully said "that the Tractory-formed Pan as a Grinder has no equal, and as an Amalgamator no superior."

As a whole, it is far superior to any other pan in use.

MANUFACTURED AT THE

Union Iron Works and Golden State Iron Works,

WHEELER & RANDALL, Inventors.

The undersigned having had several years of experience in practical quartz mining operations, will ever take great pleasure in furnishing parties interested in mining and machinery any desired information which they may possess.

SAVE YOUR BOILERS AND FUEL.

ONE-EIGHTH OF AN INCH OF DEPOSIT ON THE fire surface of a boiler takes THIRTY PER CENT. of the steam generating power from that boiler, and, of course, wastes thirty per cent. of the fuel; and, what is a greater misfortune, it keeps the water from the plates and fines, causing them to scorch, blister and burn, destroying the boiler, and too often human lives.

I Have a Compound For Sale

That I have used with complete success in every instance, and without delaying the running of machinery, or injuring the boilers in any manner, and at a cost of five dollars the boilers can be made as clean as when they were new.

J. R. MEAD & CO.,

8v10 Cor. of Washington and Sansome streets.

Let it be Known.—When any of our readers respond (by letters of inquiry or by the purchase of articles) to advertisements found in our columns, they will confer a favor, not only upon us, but upon the advertiser, by mentioning the fact of having seen the notice in our paper.

NEW METHOD OF BUYING AND SELLING.—A Paris letter describes a most extraordinary revolution in the ordinary course of affairs which is about to be inaugurated. On the site of the old Theater Lyrique a huge building is in course of construction by a company of tradespeople, who are about to start a new principle in the art of buying and selling.

There will be sold in this gigantic warehouse every imaginable article of food, dress, furniture, ironmongery, etc. The purchaser, on paying for his goods, will be handed a receipt, which he will keep, until, by successive purchases, he has receipts for one hundred francs, (£4,) on presenting which the company will exchange these for that sum. At the end of every year a lottery will take place, and if the purchaser be in luck, and his number comes out, he will be repaid the whole sum spent; but if Dame Fortune be not propitious, he may have to wait fifty-nine years to recover the money he has spent. Thus, if I buy a coat, price £4, at the end of two years, if I am fortunate, my £4 is paid back to me, or to my grandson, A. D. 1923. This sounds awfully like a joke, but the company is positively formed; it starts with a capital of 20,000,000 francs, and has paid down three millions for ground purchased.

Our Circulation.—THE MINING AND SCIENTIFIC PRESS has a large and permanent subscription list, and enjoys a more universal circulation among stockholders and persons directly interested in mining than any other paper on this coast.

Pacific Mail Steamship Co.

The following Steamships will be dispatched on the following named days.

July 18th—GOLDEN CITY.....Capt. W. F. Lapidge.

HANSCOM'S CRUSHERS,

Made in sizes suitable for Breaking Quartz for Batteries; Rock for macadamizing or concrete; Copper Ore for sacking, sampling, or concentrating; also, for crushing Quartz for Arastras and Grinders. The small sizes make a most efficient Crusher for Prospectors, and are arranged to be run by Hand, Horse, Water, or Steam Power. For further information address W. W. HANSCOM.

1 Golden State Iron Works, San Francisco.

HUNT'S PATENT
Circular Sweep Horse-Powers,

For running Churns, Washing Machines, Grindstones, pumping water, sawing wood, and other light machinery. Price, $100, at the Factory.

HUNT'S PATENT SELF-REGULATING TREAD HORSE-POWER is superior to any machine of the kind in the market. Price, with Governor, all complete to set to work, at the Factory, $300. Manufactured by

E. O. HUNT,
7v10 26 Second street, San Francisco.

THE HAMMER QUARTZ MILL.

[PATENT APPLIED FOR.]

This Machine is now complete and ready for sale. In constructing it, our aim has been to produce a light, cheap and economical Crusher—one adapted to mining on a small as well as on a large scale.

The elementary principle on which it operates is that of the stamp—the only one really reliable and economical.

But the stamp has many serious disadvantages, among which are its great weight and small velocity; the great power required to run it; difficulty in feeding properly; imperfect discharge, and the necessity of crushing wet, or the annoyance from dust in crushing dry.

All these difficulties are obviated in our machine, and the percussive blow of the stamp retained, with the further advantage of its being a drawing or grinding one.

We give to our hammers such absolute or relative weight and velocity as we choose—just such as to effect their purpose and no more—thus securing the qualities of the natural hammer blow.

The feed is self-adjusting and uniform, and as fast as the ore reaches the required degree of fineness (which depends upon the fineness of the screen or sieve used), it is instantly discharged, so that there is no packing of the ore under the hammers.

The mill crushes dry, with no more dust than that incident to feeding, which is trifling.

As the only support of the mortar is a single post set into the ground, the machine can be put in place at slight expense.

The size now being built weighs about 1,800 pounds complete; the heaviest piece not weighing over 275 pounds. It is driven by half a horse-power, and crushes from three to ten tons per day of twenty-four hours per day, according to the character of the rock and the fineness to which it is reduced.

PRICE,.....$800.

Larger ones will be furnished if desired.

We invite an inspection of the Mill now in operation adjoining the Foundry of DEVOE, DINSMORE & CO., on Fremont street, between Market and Mission, San Francisco.

Office, No. 11 Court Block, San Francisco, Cal.

21v10 **RIX & LOGAN.**

ATWOOD'S
Self-Regulating Windmill.

This Windmill is the most perfect self-regulator yet invented, and is capable of being adjusted to any desired speed. Manufactured at

222 Mission Street, North side, below Beale,
SAN FRANCISCO.

N. B.—We also manufacture DICKERSON'S SELF-REGULATING MILLS; also, Rotary and Stationary Mills of different styles and prices, varying from $50 to $500 each; also round and square Water Tanks made to order.

222 Mission street, below Beale. 5

HUNT'S
IMPROVED WIND-MILL.

THIS WIND-MILL IS RAPIDLY taking the place of all other Mills on the Pacific Coast. These Mills are so simple in their construction, that when once built, they can be put in order by almost any person; and when once in order they will run for years without repairs.

Prices, from $50 to $1,000.

ROUND AND SQUARE WATER TANKS BUILT TO ORDER.

HUNT'S PUMPS

Are admitted to be the best in the Market for Wind Mills, being built expressly for that purpose. They can be set, and taken apart with a common wrench, and are very easily repaired.

HUNT'S ENDLESS CHAIN
HORSE POWER
For Sawing Wood.

ALSO, THE

Self-Regulating Horse Power

Is so arranged as to give a steady motion, and is calculated to be used for turning Wood, Iron or Brass, also for Scroll or Circular Sawing, and is fully equal to Steam for any light work. The above Machines are built of the best materials, and made as Durable as Wood and Iron will make them.

ALL WORK WARRANTED.

☞ For further Particulars see small circulars. ☜

PETROLEUM OIL WELLS.

HENRY STEELE,
MANUFACTURER OF ALL SIZES OF
Tools for Well Boring.

Having had long experience in this line, I am prepared to fill orders promptly and at low rates. No. 107 Leidesdorff street, between California and Sacramento, San Francisco. 21v10-1m

SALMON'S
PROPELLER AMALGAMATOR.

The proprietors and inventors of this machine, after fourteen years of practical experience in mining in California and Nevada Territory, and having a thorough knowledge of the wants of Miners and Mill men, have succeeded in making an Amalgamator, which, for the purposes intended, far surpasses any other yet presented to the public, and which can be furnished at less than one-half of the expense of any other Amalgamator, now in use, besides requiring less labor to clean up and keep it in running order. The Amalgamator is simple in its construction, consisting of a pan or tub constructed of wood and adapted to either a Stone or Iron bottom. Opposite each other, and on the inside of the tub, are two flanges, from two to four inches broad, reaching from the top to near the bottom, with room for the mullers to pass under. These flanges are for the purpose of preventing the pulp from forming a circular current, and together with a number of wings placed like a screw propeller on the muller-shaft, force a current continually on the quicksilver at the bottom and under the grinding surface of the mullers. This peculiarity of propeller-screw and side wings, in combination with a deep tub, are what the proprietors claim as new and for which a patent has been applied for. The undersigned are now manufacturing three different sizes of this machine, and the attention of the public is respectfully called to the following results obtained, from the working of Reese River rock, by this amalgamator, and assayed by Miller & Linbaum, at Austin, Nevada:

No.	Fine	No.	Fine
Assay.....250	913	Assay 300	990
Assay.....283	941	Assay for Croiman	980
Assay.....286	940	Assay Water Rock	966
Assay.....291	950	Assay Water Rock	998
Assay.....		.....St. Helena Ledge, W. D.	966

These, including a hundred other batches, were all worked to within fifteen per cent., and some to within ten per cent., of the assay. Parties interested will find it to their advantage to call and see the above machine in operation.

Manufactured at the San Francisco Foundry, San Francisco, California, by

J. & W. C. SALMON,

To whom all orders should be addressed. 15

TO QUARTZ MINERS.

Hinkle's Centrifugal Pulverizer and Amalgamator!

THE ATTENTION OF MINERS IS RESPECTFULLY requested to HINKLE'S CENTRIFUGAL PULVERIZER AND AMALGAMATOR, now manufactured and to be seen in operation at the NOVELTY IRON WORKS of Mr. E. T. Steen, Nos. 37 & 39 Fremont street, between Market and Mission streets.

This machine is the best in the State for the purpose of Pulverizing and Amalgamating ORES. The whole machine, made entirely of iron, will not exceed One Ton, and no piece of it will exceed 200 pounds, which makes it very convenient for transportation to remote districts. It will work Two Tons of Rock per day.

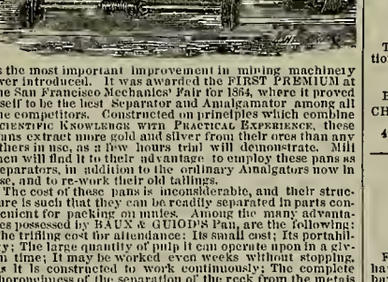
Mr. Hanson, who is running one of the machines, is an experienced Amalgamator, and will receive Ores at the above named place, and extract the metals and furnish assays for all persons wishing the same. The Subscriber manufactures a HAND MACHINE for Miners engaged in prospecting, which will work 60 pounds of ROCK at a time, and which will weigh about 175 pounds.

The Pulverizer and Amalgamator works Rock of the size of a grain of corn to an impalpable powder. Apply to

PHILIP HINKLE,

At the Novelty Iron Works, Nos. 37 & 39 Fremont street. 15-1m

BAUX & GUIOD'S
Separator & Amalgamator



Is the most important improvement in mining machinery ever introduced. It was awarded the FIRST PREMIUM at the San Francisco Mechanics' Fair for 1864, where it proved itself to be the best Separator and Amalgamator among all the competitors. Constructed on principles which combine SCIENTIFIC KNOWLEDGE WITH PRACTICAL EXPERIENCE, these Pans extract more gold and silver from their ores than any others in use, as a few hours trial will demonstrate. Mill men will find it to their advantage to employ these pans as Separators, in addition to the ordinary Amalgators now in use, and to re-work their old tailings.

The cost of these pans is inconsiderable, and their structure is such that they can be readily separated in parts convenient for packing on mules. Among the many advantages possessed by BAUX & GUIOD'S Pan, are the following: The trifling cost for attendance; its small cost; its portability; The large quantity of pulp it can operate upon in a given time; It may be worked even weeks without stopping, as it is constructed to work continuously; The complete thoroughness of the separation of the rock from the metals and the trifling power required to work them; They can be attached to any ordinary crushing apparatus.

Lapidaries' refuse, Refiners' ashes, Jewelers' sweepings, purchased or worked for a percentage. Ores and tailings worked or assayed at reasonable rates.

Manufactured at the Vulcan Iron Works, Miners' Foundry and San Francisco Foundry, San Francisco, and at Hengh & Thom's Foundry, Nevada City.

For further particulars, or to see this Pan in operation, call on or address

J. B. BAUX,

Fremont Street, near Mission, adjoining the San Francisco Iron Works, San Francisco. 4v8

FARRAND'S
Oscillating Amalgamator,

RECEIVED THE
ONLY PREMIUM
AWARDED FOR AMALGAMATORS
At the Recent Industrial Fair
OF THE
Mechanics' Institute of San Francisco.

Committee of Awards.

O. BELDEN,	W. T. GARRATT,	H. P. WAKELEE,
O. GORI,	GEO. JOHNSON,	C. M. RADCLIFF.

This Premium Amalgamator was placed on trial, at the Mechanics' Pavilion, with the Varney, Wheeler & Randall, and Hepburn & Peterson Pan, each working eight hundred pounds of crushed rock.

This Unrivaled Amalgamator possesses many advantages over all others now in use.

1st. It is capable of doing double the amount of work of the ordinary Pans, at a saving of more than one-half of the power.

2d. It reduces the pulp finer, thereby producing a better result.

3d. It requires less quicksilver by one-half at a charge, whilst the loss by trituration is comparatively nothing.

4th. As an Amalgamator of gold contained in sulphurets as it is for very fine or flour gold, it has no equal.

5th. This Amalgamator involves no complicated machinery, and is less liable to get out of order than any of the pans.

Manufactured at the MINERS' FOUNDRY.

W. D. FARRAND, Inventor,

R. L. OGDEN, Agent, SAN FRANCISCO.

S. E. corner Montgomery and California streets.

19v9

NOTICE TO MINERS.

NEW QUARTZ MILL.

THE ATTENTION OF ALL ENGAGED IN MINING IS called to Fauchery's unrivaled Mining Machines, consisting of his celebrated Turbine Water Wheel, which took the First Premium at the Mechanics' Fair at San Francisco for 1864; his Crocodile Quartz Crusher; his Pulverizer; and his improved Freiberg Amalgamating Barrel; altogether forming the most complete and effective Quartz Reducing and Amalgamating Mill now in use. This mill can be put up at less cost, run with less power, and accomplish more work, than any other now in use.

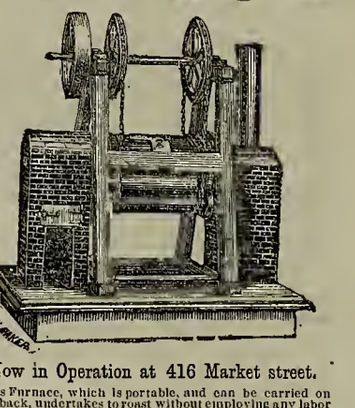
B. Fauchery and F. Genard

Having established a Quartz Mill and Metallurgical Works, are now prepared to crush, roast amalgamate, assort, cupelate, and give correct analysis of ores. We are also prepared to give our attention to the building and constructing of Quartz Mills and Furnaces, and give directions for working Mines; and also to instruct persons in all branches appertaining to Mining Works, at No. 23 Fremont street, near Market, Railroad Foundry building.

F. GENARD, Metallurgist. **B. FAUCHERY,** Engineer,

24v9

WM. BRUCKNER'S
Furnace for Roasting Ores.



Now in Operation at 416 Market street.

This Furnace, which is portable, and can be carried on muleback, undertakes to roast without employing any labor whatever for the operation of stirring, which is accomplished by machinery that may be driven by steam or any other motor. It consists of an iron cylinder, which, being suspended by chains, in rotating mixes and stirs the ore, by an internal apparatus, quicker and more perfectly than can be done in any other furnace hitherto known in metallurgy. It can be applied to any kind of ore, and the rapidity and perfectedness of its operation, the great saving in fuel, and the entire saving of the labor usually required for stirring the ore, together with the small cost of constructing it, renders this furnace a most

Economical and Practical Invention.

The Furnace may be had of two sizes—one being nine feet in length and holding fourteen hundred pounds, and the other six feet in length, and holding eight hundred pounds. One horse power is required to drive the machinery of the larger sized furnace, and three-fourths of a horse-power for the smaller size. Parties wishing to erect such furnaces will please communicate to

W. BRUCKNER,

5v10 No. 416 Market street, San Francisco.

BLAKE'S
QUARTZ BREAKER

Is now extensively used for breaking hard masses of

Quartz or Ores

To a size suitable for stamps. These machines are patented, and are in practical operation in

CALIFORNIA, AUSTRALIA,
WASHOE,
ENGLAND, FRANCE,
—— AND ——
THE ATLANTIC STATES.

These Machines, or circulars containing further information regarding them, may be obtained of the undersigned.

Address,

BLAKE & TYLER,

Box 2077 San Francisco Post Office.

CHAS. T. BLAKE,	E. TYLER,	WM. F. BLAKE,
Idaho City.	Michigan Bluff.	San Francisco.

4v10

VARNEY'S
PATENT AMALGAMATOR.

These Machines Stand Unrivaled.

For rapidly pulverizing and amalgamating ores, they have no equal. No effort has been, or will be, spared to have them constructed in the most perfect manner, and of the great number now in operation, not one has ever required repairs. The constant and increasing demand for them is sufficient evidence of their merits.

They are constructed so as to apply steam directly into the pulp, or with steam bottoms, as desired.

This Amalgamator Operates as Follows:

The pan being filled, the motion of the muller forces the pulp to the center, where it is drawn down through the aperture and between the grinding surfaces. Thence it is thrown to the periphery into the quicksilver. The curved plates again draw it to the center, where it passes down, and to the circumference as before. Thus it is constantly passing in a regular flow between the grinding surfaces and into the quicksilver, until the ore is reduced to an impalpable powder, and the metal amalgamated.

Setters made on the same principle excel all others.—They bring the pulp so constantly and perfectly in contact with quicksilver, that the particles are rapidly and completely absorbed.

Mill men are invited to examine these pans and setters for themselves, at the **PACIFIC FOUNDRY,**

1v10 San Francisco.

Hepburn & Peterson's
AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

☞ This Amalgamator may be seen in operation at the European Metallurgical Works, Bryant St. bet. 3d and 4th. [Illustrated in the Mining and Scientific Press, April 9th, 1864.]

New Mining Advertisements.

La Libertad Gold and Silver Mining Company, Cacachillas District, Lower California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 27th day of June, 1865, an assessment of fifty cents per share was levied upon the capital stock of said company, payable immediately, in United States gold and silver coin, to the Secretary.

Any stock upon which said assessment shall remain unpaid on Saturday, the 5th day of August, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Monday, the 14th day of August, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

WM. VALE, Secretary.
Office, 36 Exchange Building, San Francisco. Jy8

Lady Franklin Gold and Silver Mining Company, Silver Mountain District, Alpine county, Cal.

NOTICE.—There are delinquent upon the following described stock, on account of assessment No. 3, levied on the 10th day of July, 1863, and assessment No. 4, levied on the 3d day of June, 1865, the several amounts set opposite the names of the respective shareholders, as follows:

And in accordance with law, and an order of the Board of Trustees, made on the 3d day of June, 1865, so many shares of each parcel of said stock as may be necessary will be sold, at public auction, at the office of the Company, 305 Montgomery street, corner of Pine, San Francisco, on the 28th day of July, 1865, at the hour of 1 o'clock P. M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

J. S. LUTY, Secretary.
Office, 305 Montgomery street, San Francisco. Jy8

Napa Gold and Silver Mining Company, Silver Mountain District, Alpine county, California.—Assessment No. 5.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 24th day of June, 1865, an assessment of sixty cents per share was levied upon the capital stock of said company, payable immediately, in United States gold and silver coin, to the Secretary, at the office of the company, or to S. A. HAWKINS, Superintendent, at Silver Mountain.

Any stock upon which said assessment shall remain unpaid on Saturday, the 5th day of August, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Monday, the 14th day of August, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

J. WARREN CLARK, Secretary,
Office, No 419 Montgomery street, San Francisco.

NOTICE.—At the above meeting it was ordered that Assessments No. 1, 2, 3 and 4, levied July 1st, 1863, of 10 cents; August 24th, 1863, of 10 cents; October 27th, 1863, of 10 cents, and October 17th, 1864, of 30 cents, be and the same are rescinded, and stockholders having paid said assessments, or any portion, to be credited on Assessment No. 5 accordingly. (Jy8) J. WARREN CLARK, Secretary.

St. Paul Gold and Silver Mining Company, Amador District, Lander county, Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 30th day of June, 1865, an assessment of fifty (50) cents per share was levied upon the capital stock of said Company, payable immediately, in United States gold and silver coin, to the Secretary.

Any stock upon which said assessment shall remain unpaid on Saturday, the 5th day of August, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Tuesday, the 22d day of August, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

N. DUPERU, Secretary.
Office, No. 710 Sansome street, San Francisco. Jy8

Office of the United States Gold and Silver Mining Company, San Francisco, Cal.—Location of Mines: in Santa Fe and Ravenswood Mining Districts, Lander county, Nevada.

Notice is hereby given, that in accordance with a resolution of the Board of Trustees of the above named Company, passed on Wednesday, the fifth day of July, 1865, and in accordance with the by-laws of said Company, a meeting of the stockholders of the above named Company will be held at the office of the Company, No. 605 Clay street, in this city, on Thursday, the tenth day of August next, at 7½ o'clock P. M., for the purpose of authorizing and empowering the Trustees of said Company to sell one or more of the mines belonging to the said United States Gold and Silver Mining Company, and for the purpose of changing the by-laws of the same, and for the transaction of any and all business that may legally come before the meeting. By order of the Board of Trustees.

T. L. BIBBINS, Secretary.
San Francisco, July 5, 1865. jy8-5w

Yosemite Silver Mining Company, Oro Fino District, Humboldt county, Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 3d day of July, 1865, an assessment of one dollar and twenty-five cents ($1.25) per share was levied upon the capital stock of said company, payable immediately, in United States gold and silver coin, to D. H. CREWE, No. 402 Front street (up stairs), San Francisco, or to JAS. T. MACLEAN, Superintendent, at the mine.

Any stock upon which said assessment shall remain unpaid on Saturday, the 5th day of August, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 19th day of August, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

S. O. PUTNAM, Secretary,
San Francisco, July 3, 1865. jy8

EUROPEAN
METALLURGICAL WORKS,
—AND—
Practical Mining School,

Bryant Street, Between Third and Fourth,

SAN FRANCISCO.

THE Proprietors are at all times prepared to work or test Ores sent to this establishment—either in large or small quantities—by such process as may be found best adapted to their chemical character, after a careful analysis has been made. Test lots of Ore adapted to the smelting process attended to. Sulphuret, pyritous, and the (so-called) "rebellious ores," are having especial attention paid to their successful treatment. Assaying in the humid and dry way. Also, refining by cupellation, done at moderate rates.

PRACTICAL MINING SCHOOL.

The proprietors—encouraged by numerous applications from gentlemen desirous of pursuing the study of practical metallurgy—have concluded to admit parties on reasonable terms. Having in their Mill all the necessary appliances for crushing, roasting, amalgamating, smelting, refining and assaying, as also a well extended Laboratory for the analysis of Ores and Minerals, a good opportunity is here offered to acquire a sound practical knowledge of the business.

S. P. KIMBALL, J. R. MURPHY.

Emilia Mining Company, State of Guerrero, Mexico.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 26th day of June, 1865, an assessment of fifty cents per share was levied upon the assessable stock of said Company, payable on the 27th day of June, 1865, in United States gold coin, to the Secretary at the office of the Company, No. 55 Montgomery Block city and county of San Francisco, State of California.

Any stock upon which said assessment shall remain unpaid on Saturday, the 29th day of July, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 12th of August 1865, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

T. B. CUNNINGHAM, Secretary.

Office, No. 55 Montgomery Block, southeast corner of Montgomery and Washington streets.
San Francisco, June 26, 1865. jy1

El Alamo de San Antonio Mining Company, San Antonio Mining District, Lower California.

NOTICE.—There are delinquent upon the following described stock, on account of assessment levied on the 6th day of December, 1864, (re-advertised May 27th, 1865,) the several amounts set opposite the names of the respective shareholders, as follows:

Names.	No. Certificate.	No. Shares.	Amount.
Susan Sweetser	5	10	$10 00
W R Hughes	20	10	10 00
W R Hughes	33	15	15 00
James E Freeman	48	20	20 00
S H Stone	03	15	15 00
G H Chase	58	25	25 00
E Schlatt	66	10	10 00
Albert A Muller	67	5	5 00

And in accordance with law, and an order of the Board of Trustees, made on the 23d day of May, 1865, so many shares of each parcel of said stock as may be necessary, will be sold, at public auction, by John Middleton & Son, No. 404 Montgomery street, San Francisco, Cal., on Saturday, the 15th day of July, 1865, at the hour of 12 o'clock M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

THOMAS RUTHERFORD, Secretary.

Office, 514 Bush street, San Francisco. jy1

El Dorado Gold and Silver Mining Company, Silver Mountain District, Alpine county, California.

ASSESSMENT NO. 5.—Notice is hereby given, that at a meeting of the Board of Trustees of said company, held on the 5th day of June, 1865, an assessment of one dollar per share was levied upon the capital stock of said company, payable immediately, in United States gold and silver coin, to the Secretary, at the office of the company.

Any stock upon which said assessment shall remain unpaid on Saturday, the 15th day of July, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Monday, the 31st day of July, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

J. WARREN CLARK, Secretary.
W. D. ROOT, Deputy Secretary.

Office, No. 410 Montgomery street, San Francisco.

NOTICE.—At the above meeting, assessment No. 1, levied July 8th, 1863, assessment No. 2, levied August 4th, 1863, and assessment No. 3, levied October 15th, 1863, of ten cents per share each; also, assessment No. 4, levied September 24th, 1864, of fifty cents per share, were rescinded, and stockholders having paid said assessments will be credited on the above assessment, No. 5, accordingly. Also, notice is given, that the additional amount of twenty cents per share (being properly assessment No. 5), was levied for the month of June, 1865.

J. WARREN CLARK, Secretary.
je10 W. D. ROOT, Deputy Secretary

Garcia Petroleum Company, Garcia District, Mendocino County, California.

NOTICE.—There are delinquent upon the following described stock, on account of assessment levied on the 22d day of May, 1865, the several amounts set opposite the names of the respective shareholders, as follows:

And in accordance with law, and an order of the Board of Trustees, made on the 26th day of May, 1865, so many shares of each parcel of said stock as may be necessary will be sold, at the office of the Company, 402 Front street, on the 15th day of July, 1865, at the hour of 3 o'clock P. M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

N. C. FASSETT, Secretary.

Office, 402 Front street, San Francisco. jy1

MINING AND SCIENTIFIC PRESS

PATENT AGENCY.

For the Pacific Coast.

OFFICE OF THE MINING AND SCIENTIFIC PRESS—No. 505 Clay street, corner of Sansome, San Francisco.

Information for Inventors!

Inventors on this coast having their applications for patents made out through our Agency can sign their papers at once, and thus secure their rights at least three months sooner than by trusting the same to distant agencies, situated in New York or Washington.

The Patent Law Amendment Act, of March 4th, 1861, and March 3d, 1863, now in force, introduces several important changes in our Patent System. The general practice of the Patent Office, however, in regard to the examination and issue of Letters Patent for new inventions, remains nearly the same as heretofore.

The amendment of 3d March, 1863, provides, in section 3, that every patent shall be dated as of a day not later than six months after the time at which it was passed and allowed, and notice thereof sent to the applicant or his agent. And if the final fee for such patent be not paid within the said six months, the patent shall be witheld, and the invention therein described shall become public property as against the applicant therefor: *Provided*, That in all cases where patents have been allowed previous to the passage of this act, the said six months shall be reckoned from the date of such passage.

The first question, therefore, that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent?" A positive answer to this question is only to be had by presenting a formal application for a patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the MINING AND SCIENTIFIC PRESS. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent, together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Preliminary Examinations.

In some cases it may be advisable as a measure of prudence to order a preliminary examination. This consists of a special search made at the U. S. Patent Office, Washington, through the medium of our associate in that city, to ascertain whether among all the patents and models there stored, any invention can be found which is similar in character to that of the applicant. On the completion of this special search we send a written report to the party concerned, with suitable advice. Our charge for this service, including the report, is ten dollars. This search, though it involves the expense just named, will usually prove satisfactory. If the same device has been before patented, the time and expense of constructing models, preparing documents, etc., will in most cases be saved; if the invention has been in part patented, the applicant will be enable to modify his claims and expectations accordingly. Many other obvious advantages attending the Preliminary Examination; although the strictest search does not always enable the applicant to know positively whether a patent can be had. Applications for patents are often rejected because the Examining officer finds a description of the alleged invention in some foreign publication; or some other person has been previously rejected on an analogous device; or some other invention for a similar purpose, but partially resembles the applicant's in its construction; or the Government makes an unjust or unconstitutional decision. Against none of these contingencies does the Preliminary Examination provide; it will, however, generally inform the applicant whether an improvement similar to his and used for the same purpose has ever been patented or not in this country.

Persons desiring the Preliminary examination are requested to remit the fee ($10), and furnish us with a sketch and description of the invention.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will ofttimes find it very important to take advantage of the enveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of government that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensues. If the application is rejected we cause a thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, we have excess to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client.

If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The law requires that the inventor shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimentions; it should be neatly made, of hard wood or metal, or both, varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: DEWEY & Co., Mining and Scientific Press, No. 505 Clay Street, corner of Sansome, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail. The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. Our fee for preparing the case is then due and will be called for. The case will then be presented to the Patent Office, and as soon as the patent is ordered to be issued the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Return of Models.

Under the new law, if the applicant's case has been rejected he is entitled to withdraw his model from the Patent Office.

This law applies to all past rejected cases, and if parties wish to obtain their models through us, they can do so at a small expense.

Application for Patents, Designs, Trade-Marks, Labels, etc.

Under the new law patents may be taken out for any new form of any article, also for tools, patterns, castings, machine-frames, stove-plates, borders, fringes, all new designs for printing, weaving or stamping upon silks, calicoes, carpets, oil-cloth, prints, paper-hangings, and other articles. Trade-mark labels, envelopes, boxes and bottles for goods, may also be patented; likewise all works of art, including prints, paintings, busts, statues, bas-relief, or compositions in alto, or basso rellevo, now dies, impressions, ornaments to be placed upon any article of manufacture, architectural work, etc.

Our facilities for the prompt preparation and securing of patents are of the most thorough character and our charges are very moderate.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance. For the sake of uniformity and convenience, the remaining fees will be required to be paid in the same manner; that is to say, before the labor is performed for which they are to be received in payment.

The following is the Government tariff of fees established by law:

On every application for a design, for 3 yrs and 6 mos...	$10
On every application for a design, for seven years.....	15
On every application for a design, for fourteen years.....	30
On every application for a patent, for seventeen years...	15
On every caveat.....	10
On issuing each original patent.....	20
On filing a disclaimer.....	10
On every application for a re-issue.....	30
On every additional patent granted on re-issue.....	30
On every application for an extension.....	50
On the grant of every extension.....	50
On appeal to the Commissioner from Examiners-in-chief	20
On every appeal to the Judges of Circuit Court, D. C....	25

Renewal of Forfeited Applications.

The law passed by Congress March 3, 1865, gives the right to inventors whose applications have been forfeited, by reason of default in the payment of the final fee of twenty dollars within the six months prescribed by law, to renew their applications, which may be done by filing a new petition and a new oath, and the payment of an additional fee of fifteen dollars.

Infringements.

The manufacture, sale, or use of a patented article, without consent of the owner of the patent, is an infringement, and subjects the infringer, by injunc tion from the Court, to an arrest of or prohibition from the employment of his machinery, shop, works, factory and men in production of the article.

In addition to injunction the infringer is liable to be mulcted in treble the amount of damages awarded by the jury. The maker, the workman, the seller, and the purchaser, if a user, are all liable either collectively or individually.

Having access to all the patents, models, public records, drawings and other documents pertaining to the Patent Office, we are prepared to make examinations and give opinions upon all infringement questions, advise as to the scope and ground covered by patents, and direct with vigor any legal proceedings therewith connected. Our charge will be moderate, and proportionate to the labor involved.

Appeals.

Many important cases are brought before the Judges on appeal and the decisions of the Commissioner are not unfrequently reversed.

We have had successful experience in conducting these appeals and our services are rendered on moderate terms.

HELMBOLD'S

FLUID EXTRACT BUCHU

For Non-Retention or Incontinence of Urine, Inflammation or Ulceration of the Bladder or Kidneys, Diseases of the Prostrate Gland, Gravel, Brick Dust Deposits, Dropsical Swellings, Orgaulc Weakness, Debility, Female Complaints, Etc.

H

HELMBOLD'S

FLUID EXTRACT BUCHU

—AND—

Improved Rose Wash

Will radically exterminate from the system Diseases arising from Habits of Dissipation, *at little expense, little or no change of diet, no inconvenience or exposure*; completely superseding those *unpleasant and dangerous remedies, Copaiba and Mercury*, in curing these diseases.

U

USE HEMBOLD'S

FLUID EXTRACT BUCHU

In all Diseases of the Urinary Organs, whether existing in MALE OR FEMALE, *from whatever cause originating, and no matter of how long standing*. It is pleasant in its taste and odor, IMMEDIATE in action, and more strengthening than any of the preparations of *Bark or Iron*.

Those suffering from *Broken Down or Delicate Constitutions, procure the Remedy at once.*

The reader must be aware that however slight may be the attack of the above diseases, it is certain to affect his *Bodily Health, Mental Powers and Happiness*. If no treatment is submitted to, Consumption or Insanity may ensue.

All the above diseases require the aid of a diuretic.

Hembold's Extract Buchu

IS THE GREAT DIURETIC.

L

HELMBOLD'S

HIGHLY CONCENTRATED

Compound Fluid Extract Sarsaparilla,

For purifying the Blood, removing all diseases arising from excess and imprudence in life, chronic constitutional diseases arising from an impure state of the blood, and the only reliable and effectual known remedy for the cure of Scrofula, Scald Head, Salt Rheum, Pains and Swelling of the Bones, Ulcerations of the Throat and Legs, Blotches, Pimples on the Face, Tetter, Erysipelas, and all scaly eruptions of the skin, and beautifying the COMPLEXION.

M

NOT A FEW

Of the worst disorders that afflict mankind arise from the corruption that accumulates in the Blood. Of all the discoveries that have been made to purge it out, none can equal in effect HELMBOLD'S CONCENTRATED EXTRACT OF SARSAPARILLA. It cleanses and renovates the Blood, instills the vigor of health into the system, and purges out the humors which make disease. It stimulates the healthy functions of the body, and expels the disorders that grow and rankle in the Blood. Such a remedy, that could be relied on, has long been sought for, and now, for the first time, the public have one on which they can depend. Our space here does not admit of certificates to show its effects, but the trial of a single bottle will show to the sick that it has virtues surpassing anything they have ever taken.

B

Two tablespoonsful of the Extract of Sarsaparilla, added to a pint of water, is equal to the Lisbon Diet Drink, and one bottle is equal to a gallon of the Syrup of Sarsaparilla, or the decoction as usually made.

The above Extracts are prepared on purely scientific principles—in *Vacuo*—and embody the full strength of the ingredients entering into their composition. A ready and conclusive test will be a comparison of their properties with those set forth in the U. S. Dispensatory.

O

HOW TO USE THE REMEDIES.

In Diseases of the Blood, Humors on the Face, or any and every part of the body, use Extract of Sarsaparilla, applying to Pimples and all external Humors or Eruptions the Improved Rose Wash.

Use the Extract Buchu for all diseases requiring the aid of a diuretic, except those of the Urinary Organs, such as Gonorrhœa and Gleet; in these use the Extract Buchu, and inject with the Improved Rose Wash.

L

☞ THESE EXTRACTS HAVE BEEN ADMITTED TO USE IN THE UNITED STATES ARMY, and also are in very general use in all the STATE HOSPITALS AND PUBLIC INSTITUTIONS throughout the land, as well as in private practice, and are considered as invaluable remedies.

Brandreth's Vegetable Pills.—This medicine, of enduring efficacy, is justly prized as a corrector of all disorders of the stomach and bowels, the common symptoms of which are costiveness, spasms, loss of appetite, sick headache, giddiness, sense of bloating after meals, dizziness of the eyes, drowsiness, and cramping in the stomach and and bowels. These symptoms being suffered to remain, a torpid state of the liver supervenes, and all the horrors of dyspepsia are experienced. Every function of the frame is to a certain extent prostrated; but a little perseverance in the use of BRANDRETH'S PILLS will ever restore the system from this state of misery. Two or three doses will convince the afflicted of their salutary influence. The stomach will speedily regain its strength, a healthy action of the liver will soon take place, and instead of listlessness, heat pain, and jaundiced appearance, activity, strength and renewed health, will be the blessed result. Brandreth's Pills are sold at 25 cents per box, enveloped in full directions. Purchase none unless my private Government Stamp is on the box. See upon it "B. Brandreth" in white letters.

Principal office, Brandreth Building, New York.
W. F. BRANDRETH.
10v2tf Office at Crane & Brigham's San Fran.

"Say, why should man for thirst be given
If not for wine bestowed by Heaven
To quench such drought as mine?
Without it, I'm a fish on land,
A barren heap of parching sand—
Then give me joyous wine."—*Trinklied.*

Delicacy of flavor, exhilaration without intoxication, and every other desirable property belonging to the rightly fermented juice of the Grape, are to be found in the "Gerke Wine," from the celebrated Bosquejo Vineyard, Tehama county.

There is no wine produced in California that can bear comparison with this, and it would be difficult to find a European wine, of the same class, that can surpass it.

The vintage of 1862 is now offered for sale, in quantities to suit, by the Agent of the vineyard,

THE MECHANICS' INSTITUTE MEDAL.

We have before us, as we write, a specimen issue of the medals which the Mechanics' Institute proposes to award, as evidences of merit to exhibitors, at their approaching Exhibition. On the face of the medal appears, in strong relief, two figures, appropriately clad—one representing the mechanic arts, with the anvil, the derrick, and other appropriate ensignia at his feet; the other represents genius and the fine arts, with the pallet, the harp, the globe and the telescope by his side. The two figures are represented with joined hands, showing that genius and industry should go hand in hand. In the back ground is seen a hive, emblematic of industry, supported on a pedestal, inscribed "LABOR," while agriculture, represented by the plough, is seen at its base. Over the whole is emblazoned the motto, "Progress, Genius, Invention." Upon the reverse is the inscription of award. The whole design is exceedingly appropriate and neat. The medal is about one fourth larger than the twenty dollar gold piece, in diameter. Some two hundred medals will probably be awarded—a portion in gold, the balance in silver, each of which will be of coin standard. The first will weigh an ounce and a half, and will be worth about $30 in gold value; the silver medal will weigh about an ounce and a quarter. Diplomas will be awarded as usual.

A METALLIC COATING FOR PRODUCING A WHITE SURFACE.—This result is effected in a very simple way by Mr. Well. He makes an alkaline solution of the metal which he intends to deposit, and adds to it tartaric acid, glycerine, or some other organic matter. Iron, steel, etc., may with such a fluid be coated with copper, zinc, nickel, etc., and beautiful bright surfaces be obtained. It is usually sufficient to place the object to be coated in the alkaline solution; but, if required, a weak galvanic current may be generated by bringing it into contact with a piece of zinc.—*London Artisan.*

TO CORRESPONDENTS.—"J. S. M." from Esmeralda, has been received, and will claim attention next week; also, "C. W. T.," both old correspondents, from whom we are always pleased to hear.

AN adventurous French chemist, M. Fouke, has carefully examined the evacuations of Mount Etna during the late eruptions, and he has remarked a total absence of sulphur and its compounds in them. This, which at first sight seems extraordinary, has often been observed before, as related by Humboldt in the last volume of his "Cosmos."

A GERMAN agriculturist says that before he plants his potatoes he washes them in chlorine water and dries them in the sun. He says that he has saved them from disease during several years.

OUR MINERAL EXHIBITION.

The proprietors of the MINING AND SCIENTIFIC PRESS have made arrangements with the managers of the Mechanics' Institute to take charge of all mineral specimens and curiosities which our friends in this city and in the interior may see fit to place in our care for exhibition at the coming Fair. By this arrangement, parties sending collections from abroad, with full descriptions, will have the benefit of having the same properly cared for and displayed, and their peculiarities explained by a faithful and competent attendant, who will be present during the Fair to exchange views and information by free discussion with various practical miners and scientific mineralogists. This, we believe, will be productive of much mutual good. We shall also publish a description of all articles furnished to our care and placed in the collections, to be circulated gratuitously to visitors.

Models of new machinery, inventions, and new discoveries, may also be sent to our care for display and illustration.

Those wishing special cases made for particular articles, or other extra arrangements for display, will have their orders filled by paying whatever extra cost may accrue.

All the steam transportation companies have liberally consented to forward, free, all articles intended exclusively for exhibition, consequently our friends will only need to prepay charges to the nearest point of railroad or steamboat connection, at which place Wells, Fargo & Cos. Express will receive them in charge and deliver to ourselves.

Address, For Mechanics' Fair, care of Dewey & Co., Mining and Scientific Press Office, San Francisco, per Wells Fargo & Co.

A WHISKY DISTILLERY IN A COAL MINE.—The U. S. Internal Revenue Collectors are obliged to keep a pretty sharp lookout to prevent the artful dodging of the great number who strive to evade their obligations to Uncle Sam. Numerous underground Chinese-cigar manufactories have recently been ferreted out in the Chinese quarters of this city. The same tricks are often played in the Eastern States by those calling themselves white men. The collector of Peoria, Ill., recently had his suspicions aroused with regard to certain coal mining operations in that vicinity. In company with several assistants he visited the mine, which he entered and proceeded until he came to what appeared to be a carefully concealed lateral chamber, closely stopped up with slate and shale. This was torn away, and, after groping a short distance, the olfactories of the party plainly detected whisky in the advance. And whisky, sure enough, there was. How much whisky the mine would yield, it was impossible to tell, until a full investigation. Accordingly a force was dispatched to the place to roll it out. At last accounts it was thought the "yield" would be at least one hundred and fifty barrels. We have often heard of obtaining whisky from coal, as a laboratory process, but never before supposed it had been attempted on a large scale, for public consumption.

NEXT WEEK we shall publish a list of officers of mining companies recently elected.

LINSCOTT'S PATENT CHAMBER DRILL.

We have before alluded in our columns to this new and labor-saving California invention, and are now enabled to give our readers, in this connection, a small engraving of the instrument, together with a more minute description of the same than has previously been published.

D is the shaft of drill, forty-five inches in length. B represents the cutters extended after a blow has been given. The lower portion of D is a guide plate ½ inch thick, holding the cutters in place and allowing them to glide in and out freely, the surface of the rock preventing their falling out and securing their return. When closed the edges of the cutters protrude about 1.16 inch only. As the drill descends the force slide A strikes the bottom of the hole and a slight blow drives its wedged shaped head, C, upward, forcing the cutters upward and outward by double acting wedge power. Face of the cutters 1¾ inches in length, diamond edged. There are but four pieces in all, two of which, the cutters, are detached.

As shown above, the drill is very simple in construction and apparently not liable to get out of repair, except it may be from the wear of the cutters, of which an extra set are furnished with each drill.

The object of the drill, as every practical workman will have observed, is to increase the efficiency of blasting by cutting a chamber in the bottom of an ordinary drill hole for containing an extra charge of powder, by which means all the efficacy of the "lifting shot" is obtained upon explosion without the attendant extra labor and danger.

Every improvement which tends to lighten the hard labor of miners and give impetus to the genuine development of our mines should receive encouragement upon every hand; and we would recommend all interested parties to examine into the merits of this drill, and let those who are abundantly able hesitate not to give it an immediate and thorough trial.

Among those who have spoken voluntarily, and even extravagantly, in its praise, we have to mention the names of J. C. Goad, supt. Eureka mine, Wm. Clift, Hueston Hill mine, Samuel F. Paul, foreman of Empire mine, and M. Bennerlback, foreman Eureka M. & M. Co., of Grass Valley.

Messrs. B. F. Sherwood and Wm. H. Godfrey hold the patent right of this drill for the Pacific coast. Mr. Wm. B. Lake, No. 28 Government House, in this city, is their sole agent for the sale of the same, as will be seen by advertisement in another column.

RICH ORE FROM ARIZONA.—Several hundred tons of rich copper ore, from the Planet and other mines in Arizona, and fifteen or twenty of very superior argentiferous galena, from the Arizona Consolidated, have recently been placed on board the Wild Hunter for transportation abroad. The same ship also takes away a fine lot of ore from the Union Mine of Copperopolis.

THE STATE GEOLOGICAL SURVEY.—The first volume of the State Geological Reports is now fully due and should have arrived by the Golden City, but did not. It is quite confidently expected by the next steame

THERE are over three million horses in France. In all the world, about 58,000,000.

PREPARATIONS FOR THE MECHANICS' EXHIBITION.

We understand that the committee having the matter of the forthcoming Institute Exhibition in hand, are progressing finely with their work. Over 200 exhibitors have already applied for space in the Pavilion, a much larger number than had applied at so early a day last year. In order to meet the demand for extra space, which the committee feel assured will arise, an addition to the extent of fully 5400 square feet has been made to the northwest portion of the Pavilion. A very important improvement has also been introduced into the arrangment for lighting, by which a considerable amount will be saved in the cost of gas, while a decided improvement will be gained in the amount and utility of the light produced. This has been effected by placing an eight foot reflector on the lower portion of the dome. This reflector will show three concentric circles of burners—80 in all, and so arranged as to throw the light diagonally downward and outward into nearly every portion of the Pavilion. The 80 burners, thus arranged, will take the place of 388 that were employed a year ago, and with the aid of the reflector will give more light.

It should be borne in mind that this will be the last exhibition which can be given for several years; as the Pavilion must be taken down immediately after the close of the coming one.

We would again call the attention of our mining friends to the importance and advantage of sending a good show of minerals. Besides presenting a most excellent advertisement for the various sections which will be represented, it will also afford scientific men, and others, the opportunity to examine the mineral resources of the country in miniature. Several parties have already engaged, through the publishers of the MINING AND SCIENTIFIC PRESS, space for the exhibition of minerals. In this connection we would call especial attention of advertisers and others to the prospectus of our DAILY FAIR PRESS, which will be found in another column.

THE CHOLLAR-POTOSI CO.—We understand that no officers were chosen at the annual meeting of the stockholders of this company, held on the 11th inst., and the old officers consequently hold over. The following gentlemen comprise the list of officers:—A. K. P. Harmon, President; W. E. Dean, Secretary; J. B. Haggin, Thomas Bell, A. C. Peachy, Louis Sloss, M. C. Hillyer and B. B. Sherwood, Trustees; Harry Beckwith, Superintendent. The new stock of this company will not be issued for three or four months. No meeting for the election of new officers will be called until after the new stock has been issued.

ACCIDENT.—Mr. Swift, brother-in-law of Mr. J. Sevenoaks, met with a severe accident a few days since, while passing along the road near "Mountain Charley," Santa Cruz. He was driving a one-horse buggy, with a spirited horse attached, when the animal became frightened and plunged down the steep bank, completely destroying the vehicle and badly injuring the animal. Mr. S. miraculously escaped with but slight injuries.

Communications.

In this Department we invite the free discussion of all proper subjects—correspondents alone being responsible for the ideas and theories they advance.

[Written for the Mining and Scientific Press.]

THE AGE OF GOLD-BEARING ROCKS.

BY THOMAS ROWLANDSON, FELLOW OF THE GEOLOGICAL SOCIETY, LONDON.

NUMBER SIX.

The economical considerations indicated by the geological features described in the last number, not only as connected with mining for the precious metals, but also as to the probable production of petroleum, etc.

Before proceeding further with this subject, it will perhaps be well to draw the attention of the uninitiated reader to the fact that it will be necessary for him, in order the better to understand the subject, that he should at once disabuse his mind of the impression that anything like the same physical features as regards land and water, elevation or depression, existed at the time the beds just noticed were deposited as compared with what is now seen; it would be well also for him to bear in recolleetion that the vast bulk of the stratified rocks, composing so large a part of the crust of the globe, must have been deposited subaqueously, whether the area was oeeanic, lacustrine or fluviatile, sub-ærial accumulations being confined to strata composed of vegetable remains, volcanic ash, drifting sands, and the very limited amount of rocks deposited by mineral springs. The last, perhaps, ought more appropriately to be classified amongst aqueous deposits, the most extensive examples of which are to be found in the tufaceous and travertine deposits of limestone and volcanic regions.

Such being a very brief outline of the general features connected with the deposition of stratified rocks, the reader will be prepared to aeeept, as a fact, that at the time when the beds were formed, which are alluded to by the State Geologist as possessing generally similar features to the Halltstadt and St. Cascian beds of the Alps, and stated, on the authority named, as being found so generally in the metalliferous mountain region of the Pacific coast, were at that period submerged, and, unless a misprint has occurred in the text quoted—namely, "halobia," in place of halonia*—all the organic remains described as having been procured from the beds under notice, are those of aquatic animals, inhabiting shallow waters. From the data given, it may be conceived that a large part of this area, notwithstanding occasional upraisings and submergences, existed at various intervals and long periods, as dry land; otherwise we cannot account for the absence of an immense thickness and long series of beds intervening in many other districts, both in this and the old continents, between the mountain or carboniferous limestone and the lower beds of the Triassic series. It is only in this way that we can account for the otherwise anomalous admixture of paleozoie fossils in connection with others usually assigned to seeondary or, as they are now more usually termed, mezozoic (or medival) rocks—which includes the Triassic, the Jurassie and the cretaceous or chalk periods.

This singular admixture of forms may be accounted for by the circumstance that after only a very limited thickness of the lower carboniferous rocks was deposited, that a large area of them was upraised above the ocean level, and continued so until about the commeneement of the Triassie period. That physical conditions, connected with not only the underlying carboniferous rocks, but also as respects the subsequently superposed deposited matter, might oecasion an admixture of fossils, can easily be imagined. Calcareous or silicious beds, in an arenaeeous state, plaeed near a stormy shore line, or a bank, amidst a rongh and shallow sea, would afford the neeessary conditions here supposed, and which probably occasioned the singular admixture of fossils noticed. The nature of the fossils, however, indisputably prove that the beds themselves must have been deposited below the ocean level—a level which it must be understood could not reatively differ mueh from that now existing; consequently these beds must have been raised, in many instanees, five, six, or seven thousand feet, and upwards, above the level of their original deposit to their present elevation. It must also be remarked that if any series of beds, or a single bed of any one series, is examined for gold or silver, none can be found; thus pretty well, though indirectly, establishing the fact that no auriferous veins existed in their vieinity, otherwise some traces of gold, however slight they might be, would be found mixed with one or more beds eomposing the series. It can, however, easily be imagined that during the aet of upraising from the sea level to their present, say five thousand feet or upwards of elevation, that fissures and various fractured conditions probably would and did arise, which have given origin to the metalliferous bearing veins which almost always form so marked a contrast, in lithological character, with the adjacent rock. All these facts go far to prove that it is only at a very reeent period of geological time that the metalliferous veins of the Sierra Nevada of the Paeifie eoast were filled with their valuable eontents.

Calaterally with the problem noticed, arises another, quite as interesting in its economieal aspect as the one just dwelt upon, namely:

How far do these discoveries, or asserted discoveries, throw light upon the probabilities of finding coal or petroleum?

The importance of the two queries above put are sufficient to justify even a lengthy episode to the investigation of the subjeet which forms the title to this series. As, however, both the enquiries eonneeted with the sub-caption have an important referenee to a particular branch of the main enquiry, there is the less reason required for making any apology for inserting what otherwise might be deemed an interpolation.

It is unneeessary to go over ground already noticed, respecting the probability that during a long period, in the course of which, in many other parts of the world, were deposited beds of many thousand feet in thickness, intercalated in some places with hundreds of feet of coal and carbonaceous shales, the shales, and possibly some of the coals, termed cannel coals, were probably produced under water; but the bulk of the carbonaceous accumulation indicates a terrestrial flora; to account therefore for the absenee of the coal seams in the anomalous beds which have so frequently been referred to, we have only to conceive the following state of things: 1st. That the conditions essentially required by the coal flora did not locally exist at the time the now well known stores of mineral fuel, in various parts of the world, were accumulating. In eonneetion with this part of the subject, it is well to call to mind that the existence of working deposits of coal is the exeeption rather than the rule throughout the world, as by far the largest part of the earth is devoid of them. The praetieal inference to be drawn from these facts is, that in the vicinity of the Sierra Nevada, as in the vicinity of the Alps, the true coal measures are absent. 2d. That if we admit the absence of coal amongst these beds, we must, on the same account, admit the absenee of accumulations of oil, such as have been found in the Eastern States; for although many of the wells that have been tapped in the Eastern States have been obtained from openings, fissures and lines of fault situated in rocks below the carbonaceous series, that fact by no means nullifies against the great probability, amounting almost to absolute certainty, that the great source of Eastern petroleum has chiefly been the contiguous anthraeite beds.

In the absence, therefore, of the neeessary *source* it would be idle to seek the derivitive *petroleum*. Even the uninitiated reader will at once see from the preceding remarks how important it is that every particle of available information, connected with the fossil flora and fauna of the State survey, should be made as accessible as possible to every enquirer, and not locked up in boxes or other obscure places, for the sole use of any State servant.

Do the preceding facts prove or disprove the probability of the existence of large quantities of petroleum in California?

If the data on which the preceding argument is based, be correct, it may be assumed that it is highly improbable that any considerable, or perhaps any true coal beds or petroleum derivable therefrom, will be found on the Pacific coast; and, as far as coal is concerned, probably none of that mineral will be found of a quality equal to that frequently found in the true carboniferous series. The searcher after oil must not, however, be discouraged at the statement just made. He may, perhaps, be benefitted by knowing that if he has positive indications around any place where he may contemplate boring for oil, that the strata belongs to the carboniferous formation, it will be well to hesitate before going to further expense, as the probabilities are greatly against success.

Now, although the quantity of coal or lignite obtainable from the more recent geological formations has never yet been found so great in quantity nor so valuable in quality as that found in the beds of the carboniferous formation in Pennsylvania and other parts of the world, it by no means follows that the petroleum derivable from lignites, and more recent coals, may not be abundant in quantity and exeellent in quality; all that it is here desired to impress on the reader's mind, is that if for reasons already given, the beds of mineral coal belonging to the true carboniferous series are deficient, or entirely wanting in California, we must not feel surprised that the other physical conditions requisite to form "blowing" or "spouting" wells may not be present also. The permanency of flow from such wells at the East has yet to be tested. Less than a couple of years has already exhibited a most marked decrease of artesian flow, and it has yet to be tested how far the subterranean reservoirs in the Eastern oil districts will bear drawing on by pumping. It should always be borne in mind that both pneumatie and hydrostatic influenees have, in most instances, in the large spouting wells hitherto formed, contributed greatly to the surprisingly large flow which, in some instanees, has been exhibited. When the pressure from these causes diminishes we shall be better able to obtain data on which to base an estimate of the probable future yield. As yet, any opinion based on so limited an experience as we now possess, would be of the most speculative character.

Fortunately for the owners of California oil lands, all of which, so far as the writer's personal investigations have proeeeded, as well as from information derived from others, have fully established this faet that the most promising oil lands on this eoast derive their petroleum from beds not below the Jurassic, and in most instanees probably not of an age greatly different from the tertiary lignites of other parts of the world. Mines of "asphalte" have long been worked for eeonomic purposes in the vieinity of the Jura, and it is amongst these and the tertiary beds that from an ancient period so abundant a supply has been obtained. The neighborhood of the Caspian and Dead Seas has for thousands of years yielded an enormous natural flow; for centuries the vieinity of Amiano, in Italy, has yielded the same, and the wells on the Irriwaddy, near Rangoon, have yielded 700,000 barrels a year, or 2,000 barrels per day for many eenturies. All these plaees derive their petroleum from tertiary beds, analagous to those which afford the prineipal surface springs of petroleum in California. The inference to be drawn from all these facts is that though the attempts to obtain oil wells may prove in most easeo a disappointment, evidences exist of the most marked charaeter that over a very large area produetive wells will be discovered, ealculated to yield a large aggregate, and that on some specially favorable positions the yield will be immense in quantity, and probably of a mueh more durable charaeter than anything found derivable from the true carboniferous formations.

[To be continued.]

Halonia, a genus of the Lepidodendreæ, is found in the coal measures, and as Professor W. alludes to the partial existence of carboneaceous beds, it is of importance to know whether the word quoted is intended to represent an animal or a vegetable fossil.

[Written for the Mining and Scientific Press.]

The Problem of Gold and Silver Extraction—A General Review—No. XIV.

BY PROF. L. LANSZWEERT.

SILVER PROCESSES.

That mill owners may be greatly benefitted, in the reduction of silver ores, by the adoption of some of the modified appliances of reeent introduetion, there ean be no reasonable doubt. It is also a matter of intcrest that the mind of the mining community has become quite fully awakened to the late ehanges and advanees that have been made in the seience of procuring the precious metals from their gangues. "Cosmos" lately gave Washoe, now the State of Nevada, the credit of being the "first in mineral wealth and first in the art of working silver ores." Notwithstanding that region has done mueh in advaneing this important braneh of industry, we must nevertheless pronounce the assertion of "Cosmos" as somewhat broad, and when it is reeolleeted that it emanated from a somewhat enthusiastie and etherial mind, it will of course be reeeived *cum grano salis*. The amount of bullion received from Nevada, large as it is, will scarcely entitle it to being set down as "first in mineral wealth" among the silver producing countries of the world. The statement of her being the "first in the art of working silver ores," his own confession, written a little later, appears to abundantly disprove; he writes, in his "Mineral Wealth of Washoe" as follows: "In fact we are beginning to realize the fact that the older methods, and thorough working of the material is the *great desideratum* after all, and better than an extra amount of scientific knowledge, that is of no practical benefit." *Scripta manent, verba volent*, Mr. "Cosmos." Having sought diligently for "the little red powder," and not having found it yourself, you should not therefore endeavor to stigmatize *every* scientific applicatiou for the reduction of silver ores; nor pronounce everything in that direetion a humbug, because patented or kept secret, while even you have secured, by letters patent, the exclusive right to an alleged improved mechanieal idea of a muller for grinding.

Notwithstanding that most of the wild theories for the reduction of silver ore, introdueed into Washoe, have been exploded—that the alledged wonderful discoveries of processes by which silver could be extracted from its ores at a nominal expense, when submitted to the severe test of actual experiment, have proveu failures; still substantial improvements have been effected in this department of metallurgy.

Among the useless expenditures in this direetion we have McCullough, Hatch, Veateh, the sage-brush, the stove-pipe, and lastly the loaf-sugar process—*et tutti quanti*—processes only known in the Washoe region, where hundreds of dollars have been expended, foolishly, to test the magieal power of these inventions. We have also the experiments of some, who, having observed an astonishing phenomenon in the reduction of ores, or having found a hint in a book, have followed the matter up, worked the ore for some time, then assayed the residue by the usual way of assaying, and finding no silver, have inferred that all the silver has been extracted.

Silver can be lost in three ways; by volatilization, by solution, and by the tailings; but it may turn into sueh combinations, as are not to be found in the usual way of assaying by acids. Even the assay by fire, however, rarely subject to such mistakes, can give very erroneous results. If particular precautions are not taken, even the Washoo silver ores give, very often, oeeasion to such combinations.

Thus, investigators here repeat again all the experimeuts already made by earlier generations, spend useless money, and create a general distrust against real improvements, based on seientific progress.

PATIO OR MEXICAN PROCESS.

This method is said to have been invented in Mexieo by *Bartholomeo de Medina* in 1557, where it is still practiced in its primitive simplicity. The ore is mixed with ten per cent. salt and magistral (sulphates of iron and eopper): by the action of these salts, the air, and humidity, chloride of silver is formed; after some days, mereury is added, ten times the quantity of the silver contained in the ore, and the amalgam gathers at the bottom of the heaps. This proeess requires no machinery at all, but lasts from twelve to fifteen weeks, and causes a loss of twenty per eent. of silver, and of from thirty to fifty per cent. of quieksilver.

Medina used only salt mixed with the sulphates of iron and eopper; but when, in 1586, *Carlos Corso de Leca*, a Peruvian miner, discovered the *beneficio de hierro*, by adding to the ore, reduced as fine as flour, small scraps of iron, he so improved the process that there was nine-tenths less loss of mercury than in the original patio. This proeess is based on the decomposition of the chloride of silver by iron and the affinity of the latter for sulphur. This is known, yet but little adopted, by the Mexican azogueros.

The process of amalgamation, in the cold way, or *de pie*, as it is termed in Guanajuato, is brought to such perfection that it has gained a world-wide celebrity, the degree of perfection of this patio amalgamatiou obtained there is far surpassing that attained in any other portiou of the two Americas. Formerly the rich ores were redueed by fire, and the ruins of several smelting works are still standing; but this proeess has for its costliness been abandoned, and the ores are now exclusively treated by mereury—the charges being fixed the preseut year (owing to the high priee of mereury and mule-feed) at $32.37½ per *monton*, or $20 per ton of 2,000 lbs.

The cheapness and exeellenee of the *beneficio* of Guanajuato arises from the following causes: 1st, working on a large scale; 2d, separation of mining from reducing operations; 3d, fine grinding; 4th, use of chemical assays for guidanee; 5th, use of several vats in the *lavaderos*, or washing machines, to prevent loss of amalgam; 6th, great care in supervising the various stages of the reduction. To these may perhaps be added, 7th, docility in the ores rather superior to the average. To render the

system as practiced in Guanajuato intelligible to the unprofessionable reader, we will take the operations from the beginning and follow them regularly to the last of all—the isolation of the silver from the worthless dross which envelops and masks it.

DESCRIPTION OF THE PROCESS.

We will suppose the hacienda contains fifty arastras, twelve feet diameter, each driven by two stout mules; which will reduce twenty tons *per diem*, and necessitate the employment of twenty stamps, of about 125 pounds each, moved by twelve mules more. At 3 A. M. each arastra is charged with from 700 to 1,000 pounds of ore-sand from the stamps, (dependent on the degree of fineness,) consisting of a mixture of all the ores obtainable from different mines—such mixture invariably facilitating the reduction, and diminishing the loss of silver and mercury. The requisite proportion of water being added, and this is an important point, the grinding is continued for twenty-three hours, or till the *lama*, the pulverized ore, manifests no grittiness on being rubbed strongly against the thumbnail, and till a *tentadura*, or trial sample, after being washed out in a little basin, leaves only an impalpable *asiento*, or deposit of metallic particles. Should the slightest coarseness be perceptible, more water is added to thin the *lama*, and the fluid portion is drawn off by a spigot, leaving the coarser deposit to be reground with the next charge. The ore-mud having been left to drain till it attains the proper consistency, is incorporated with five or six arrobas per montón (four to five per cent.) of salt, or an equivalent amount of saline earth, and spread out in round cakes of twenty-five to one hundred montones, in the *patio*, a large courtyard well paved with flags. Here it is left to absorb and dissolve the salt, and meanwhile portions are removed for the assay, by which the addition of quicksilver is regulated—the proportions being seven to eight pounds for every pound of silver present. The amount of silver obtained by a skillful manager is generally larger than that shown by an assay—an excess arising from several causes, which I have not space to enumerate. After remaining heaped up a greater or less space of time, (usually 24 hours,) to *ensalmorar*, the mercury is added in as fine a state of division as possible, together with about twenty-five pounds to each montón of *magistral*, calcined copper pyrites, or—which is preferred by many—an equivalent quantity (say one-sixth) of crystalized sulphate of copper. It is now well trodden over by mules, horses, oxen, or the feet of men, and left to operate.

SIMPLIFYING THE PROCESS.

Mr. Parkman, an old Santa Fe trader, engaged for some years in silver-reducing, has invented and put into operation, to shorten this expensive and tedious operation, a very simple machine, which after two years experience leaves nothing to wish for. It consists of a pair of high wheels furnished with lateral arms, and so geared by rack-work and pinion as to alternately advance and recede from the center while revolving. Another machine, with treaders, was invented by the Administrador of Barreras, and ran for a few days, but on account of breaking the pavement was laid aside and abandoned. The loss of power in this treading process is excessive, and if some smart Yankee could invent a simple, cheap, and effective machine, that could not be readily broken, to accomplish the result aimed at, a perfect mixture of the ingredients with the ore—he could get a twenty years patent, the blessings of every *beneficiador* in Mexico, and, what is perhaps better, a handsome fortune into the bargain.

The material being more or less perfectly compounded—no globules of mercury being visible in the mass to the naked eye—the labor of the "azoguero" commences. Now comes the tug of war. The state of the "torta," if it requires "repasos," or salt, or mercury, time to "cool," or magistral to "heat" it, are all determined by the *tentadura*, or "panning out," and in this consists the entire success of the operation—the whole science of the *azoguero*.

After each new addition another *repase* is given, and sometimes when no addition is necessary, and from time to time the amalgam is assayed to see if it indicates a gain of silver. When one or two marcs per torta is all that is gained *per diem*, and the *limadura*, or fine particles of amalgam in the tail of the *tentadura* appears opaque, not lustrous, and, on being rubbed gently against the side of the bowl, gives off grains of running mercury, the *beneficio* is considered finished, and the torta is carried to the *lavadero*, to be washed. This part of the process is important, as on it depends the saving of the silver already reduced and amalgamated. It is conducted on different principles in different parts with more or less perfect results.

[To be Continued.]

A COLORED girl, who had been blind for five months, received her sight immediately after the explosion of the powder magazine at Richmond.

Mechanical.

THE FOUNDRIES.

At the MINERS' FOUNDRY we were shown the castings of a large sugar mill, intended for Messrs. E. Bailey & Son, of Wailuku, Maui, Sandwich Islands, said to be the first of its size ever built in this State. Compared with the various agricultural machines with which we of the Northern States are acquainted, this is truly a monster of weight and strength. The three rollers are each twenty inches in diameter, and about four feet in length and supported by a spindle or shaft of hammered iron seven inches diameter. The upper roller is held down by means of four wrought iron bolts, three inches in diameter with nuts of brass. This mill is to be driven by water-power, and the castings for the water-wheel, together with the iron-work for a complete sugar manufactory of the first class, are being made at this establishment. The proprietors of this foundry have commenced manufacturing both the old and new styles of Hepburn & Peterson's amalgamators, several of which were building at the time of our visit, on an order from parties in Washoe. We also noticed one of those most novel of novelties, the Hopkins' Amalgamator in course of construction, and were told that several had been built lately and that they were in increasing demand.

At the VULCAN and PACIFIC FOUNDRIES there was fully the usual amount of general and ordered work, though nothing new of special interest had been commenced since our last visit.

From the FULTON had just been shipped one of Dunbar's crushers and one of Moore's grinders, together with an engine seven inches in diameter of cylinder and sixteen inches stroke, capable, it is thought, of crushing and grinding ten tons of quartz daily. They are also making a double-acting force-pump, sixteen inches in diameter and seven feet stroke, for Reedy & Co., of La Grange, Stanislaus county. This pump is to be driven by water-power, and used for raising water from the river to the top of the adjacent bluffs for hydraulic mining purposes. In addition to these and some other mining orders, including one for four of Prater's Concentrators which are now nearly finished, a twelve-inch engine twenty-four inch stroke, has just been built for a saw-mill at Portland, Oregon.

Messrs. Palmer, Knox & Co., of the GOLDEN STATE, are making the iron work for three bridges for the Central Pacific Railroad Co., which they hope to ship soon. Among the mining orders now being filled we noticed a five-stamp battery for Robinson & McCartney, of the new Crystal Peak district, and another for the California Furnace Company. A ten-stamp mill, with six of KNOX's amalgamators, had just been finished for the Excelsior Mill & Mining Company, of Virginia City, also complete hoisting gear for the Bunker Hill mine, Amador county. This firm are now building one of Lundgren's pulverizers, a new Eastern invention, which has at least the merit of being novel if nothing more. It consists of a revolving hollow drum, containing equal weights of the ore to be crushed and of half-ounce cast iron bullets. This machine is to be sent to Mexico, where if it should not succeed as a pulverizer, the *bullets* at least, in the present disturbed state of that country, can be made useful.

From the Golden State we repaired to GARRATT'S BRASS FOUNDRY on Market street, in company with Mr. Hanscom of the former establishment. Here we were very politely received and every facility given us for viewing this fine establishment. On the second floor of the building we were shown three new lathes just imported from Boston, which Mr. Garratt informed us were to be employed solely in manufacturing "stock work," all orders for special kinds of work being attended to by the workmen on the ground floor. The lathes in question were of the highest character of finish and general execution, being, in fact, the finest specimens of Eastern manufactured machinery we have ever seen on this coast.

The principal work at this foundry is cast work for steam engines, though large bells are also made a speciality. We were shown some very fine specimens of work intended for the Fair of the Mechanics' Institute, to be held in August next, together with some superior work exhibited last year.

CUTTING STEEL WITH SOFT IRON.—"We give, for the benefit of those interested in the experiment, the particulars of the apparatus lately constructed for the Franklin Institute, to repeat Perkins' experiment of cutting hardened steel with a soft iron disk rotating at a high velocity. A disk of steel, such as is used for circular saws, but annealed so as to be very soft, is mounted on a steel spindle, which carries also a three-inch cast-iron pulley, and the whole is then carefully balanced until it will rest indifferently in any position, on two straight edges. This spindle, etc., is then mounted in cast-iron swiveled bearings. A belt, 2 inches wide, on the pulley, is driven from a 36-inch pulley on an ordinary shaft, which carries also a 10-inch pulley, to which motion is given by a 4-inch belt from a 48-inch pulley on the engine shaft. The engine was run 120 revolutions per minute, which would give, with every allowance for "slip," between 5,000 and 6,000 revolutions per minute to the disk. At this velocity the hardest files were cut like soft wood, with the production of a blaze of light and showers of sparks, without the least injury to the edge of the soft disk."—*Journal of the Franklin Institute.*

Mr. Perkins reported the result of this experiment in one of the London journals; and gave credit to a young mechanic in Maine as being the originator of it. Fourteen years ago we met the original discoverer, who was then residing in New York. We do not remember his name. The discovery was accidental; he put into a lathe a disk of soft iron, which he wished to smooth by holding a file upon it as it revolved. The file was cut into. He thought it was broken; and tried again, and was surprised to find that it was cut. This was published, and Perkins read the report, and tried the experiment; and it was by this means that it became known to the mechanical world.—*Ex.*

GLASS TURNING—A CURIOUS DISCOVERY.—Glass may even be turned in a lathe. Strange as it may seem, this is literally true. No special tools even are needed; any amateur turner who has operated on either of the metals may chuck a piece of glass on his lathe and turn it with the same tools, and in the same way, as he would a piece of steel, only taking care to keep the chips from his eyes. This strange discovery was made, almost accidentally, in the year 1860, by one of our most celebrated mechanical engineers, and might have been patented, but the inventor contented himself with simply putting it on record, and generously presented it to the nation. The consequence was, that no one cared or thought about it, and the idea has been suffered to lie nearly barren, though capable of being turned to great account. Let any amateur mechanic make the experiment, and he will be surprised at the ease with which this seemingly intractable material may be cut and fashioned according to his will.—*Chambers' Journal.*

ANOTHER LARGE CASTING.—Another huge anvil block has been cast at the works of J. M. Stanley & Co., Midland, England. The casting weighed 160 tons, and was a perfect success. The previous one, the casting of which we recently noticed, weighed the same amount, and was six weeks in cooling before it could be removed from the mould. The fans employed at the last casting were driven at a speed of 1,400 revolutions per minute; a portion of them were run up to 1,600. This firm is celebrated for possessing the largest anvils in the world, and the most extensive and complete set of steel melting pots.

HARDENING OF BURNT CLAY.—At Rivieres, France, they make tiles and bricks of a sandy clay which contains 32 per cent. of chalk. When first burnt, they are so tender that, unless they are carefully handled, they fall to pieces. As soon, however, as they are cold enough to touch, they are quickly removed from the furnaces and carefully stacked. They are then soaked with water, by the action of which they are so hardened that they may be used the next day for building. This fact is, perhaps, easily capable of a chemical explanation, and brickmakers may be able to gather a hint from it.—*Chemical News.*

IRON CLOTHES LINE.—An eastern writer recommends the use of galvanized telegraph wire for clothes lines. The wire being galvanized, it will not rust, and therefore can remain out in all kinds of weather without injury.

PACIFIC GLASS WORKS.

We understand that the Pacific Glass Works, at the Potrero, are now in most successful and active operation. During the week ending July 1st, 32,400 bottles were manufactured at that establishment. The demand for this description of ware, in this State, is very large and rapidly increasing, as it grows out of the wine business to which we can scarcely set limits. We understand that the Pacific Works makes this class of ware a specialty, and that out of it the establishment is making a fair profit, besides doing much to encourage and facilitate the building up of what is destined, ere long, to become an important industry in California. The recent starting in this city of a second establishment for the manufacture of glass, and which we noticed at considerable length last week, affords good evidence of the necessity, the profit, and the permanency of the business. We trust that stockholders in both institutions will realize their most sanguine anticipations of success. Our citizens should bear in mind that we have three establishments in our midst, and in making their purchases, should always give preference, all other things being equal, to home manufacturers. For ourselves, we shall patronize the apothecaries and lamp stores that buy prescription bottles and lamp chimneys at the San Francisco Glass Works, at the foot of Third street; and the wine merchants that send their orders for bottles to the Pacific Glass Works, on the Potrero.

FURNACE IMPROVEMENTS—In the reduction of copper ores, Messrs. Spence and Heath, of Manchester, England, have patented an invention to economize fuel and labor in connection with the preliminary expulsion of sulphur and absorbing of oxygen (calcining) and subsequent fusion of the ore. The invention consists in annealing the heat used in smelting copper ores to the purpose of calcining such materials, and transferring the calcined ores direct to the smelting furnaces. To accomplish these objects they place the two furnaces in connection with each other, and cause a suitable flue to convey the heat used in smelting to the material to be calcined, and when this operation is complete, and the smelted ore is removed, they rake the calcined ore direct on to the bed of the smelting furnace.

A NEW CRUSHER.—The Los Angeles *News* speaks of another Los Angeles invention, which that paper describes as a new Quartz Crusher, represented in a 12-stamp model, invented by D. Saxton, of San Gabriel. It is pronounced by experienced quartz miners to have superior practical qualities. The application of power differs from all other crushers now in use.

AN ingenious Oregonian has invented a machine for separating gold from dirt without the use of water.

THE THEORY OF SMALL MEN.—It is a curious fact, that a large majority of distinguished men, whether in the field, the cabinet, the forum, or in the illimitable arena of arts and sciences, have been under-sized; but few have been of a lofty stature. Who can account for this, but on the hypothesis that they were perfect copies, even to the physique of the mother nature? A Teuton was asked how he came to have so feminine a face? "Because my moder was a woman," responded honest Hans. If we examine the early histories of eminent men, we find that they nearly all received their early training from women; we shall find that the subtle essence that thrilled into life their dormant powers, emanated from the soul of woman—mother or instructor. St. Chrysostom, St. Augustin, Louis IX. of France, and the Wesleys, are brilliant specimens of the mother's training. In the eyes of woman depreciators, it must appear an odd freak to constitute women the brain moulders of monarchs and statesmen; such, nevertheless, was frequently the case.—*Knickerbocker.*

BIRDS.—We know of nothing more cruel and heartless than the wholesale slaughter of the small birds, so common in many of our towns. The farmer owes more to birds than he is apt to admit. They destroy innumerable insects which would prey upon his fruits and injure his crops. If the robin, the cherry-bird, the cat-bird, or any other, is disposed to make a dive at the strawberry bed or the cherry tree, there are modes of preventing them from taking all. If they want a few, better let them have them than to kill them.

City Stock Reports---San Francisco Stock and Exchange Board.

From the "Weekly Stock Circular" of the Associated Brokers.

SAN FRANCISCO, SATURDAY MORNING, July 15th, 1865.

Continued ease and abundance are the prevailing features in the money market. The demand is moderate, and Bank accommodations rule at 1¼@1½ ₱ cent. per month. The outside requirement for stocks and other speculative purposes is of no magnitude, and negotiations are made without difficulty at 1½@2½ ₱ cent. per month.

Receipts of treasure from the interior, since Saturday last, amounted to $1,200,000, making an aggregate of $2,000,000 thus far during the current month. The supply of bullion is thought to be ample for Monday's steamer, and gold bars are selling at 820@830. Silver is unchanged, and may be quoted at about par for average lots.

The arrivals of treasure in this city from all sources during the first half of the current year, have been as follows :

From California	$17,200,000
From Nevada	8,200,000
From Coastwise Ports, North and South	2,500,000
Imports, foreign	1,000,000
Total	$29,300,000

The above figures include coin as well as bullion. The total recorded receipts of the latter, for the first six months of this year, amounted to $25,000,000, showing an increase of $2,200,000 as compared with a corresponding period last year. The receipts from Nevada, (nearly all of which were bullion,) during a like period in 1864, were $7,800,000 ; an increase this year of $800,000.

The product of all the mines on this coast, received through regular channels and in private hands, from January 1st to June 30th, has probably reached $30,000,000, being about $2,000,000 in excess of last year. The exports of treasure from this port during the same period amounted to $23,000,000, (including $2,000,000 shipped on Government account,) as against $29,000,000 in the first half of 1864.

The following figures serve to show, in some degree, the currency movement of the past six months :

Coin remitted to the interior	$5,665,281
Coin received from the interior	2,682,739
Added to interior circulation	$2,982,542

We have been requested to call attention to the new schedule of commissions adopted by the Stock and Exchange Board, and to publish the 35th article of their by-laws, as follows: "Any member doing business for less than the regular commissions, shall, on due conviction, for the first offense, be suspended for the term of ten (10) days, and a fine of one hundred ($100) dollars. For the second offense—suspended for thirty (30) days, and a fine of two hundred ($200) dollars. For the third offense—expulsion from the board. All excise taxes upon the sale of stocks shall be paid by the broker. Also, it is fully and distinctly understood, that the commissions hereafter to be charged, shall be upon all purchases and upon all sales, and that the full amount shall be charged and no less sum received, except the principal or customer shall be a broker, belonging to some organized board of stock brokers, with whom a division of commission shall be allowed." The penalties herein prescribed are severe, but just, and in view of the reduced scale of commissions, henceforth there should be no abatement of the regular charges, except as above stated.

Legal Tender Notes revived a little, early in the week, under receipt of telegraphic advices from the East, to the 27th ult., quoting gold at about 141, and small sales were made at 74c@74⅛c, since then the market has been dull at about 73⅝c@73¾c.

The Mining Share Market, since Saturday last, has been apathetic but rather firm so far as regards most leading stocks, while some lower priced shares were exceedingly active at enhanced rates and are well sustained at the close.

Gould & Curry met with small sales at $1,730, seller 30, and $1,750 cash, and is now firmly held at $1,775.

Savage has been dealt in to the extent of 26 feet, rising from $1,390 to $1,420, receding to $1,400, then selling at $1,410, and closing at $1,375 asked. There is no material change in the upper portion of the mine. Work has been resumed upon the body of ore found in the lower level.

Alpha is inactive but well sustained. Trifling sales were made at $1,400, and $1,425 was bid at the close. The company have commenced to hoist ore from the lower level.

Yellow Jacket has not fluctuated materially, and 36 feet changed hands, opening at $1,065, receding to $1,015, rallying to $1,065, and selling yesterday at $1,050@$1,060, closing at $1,070 bid.

Crown Point rose from $760 to $810, then sold at $830, and closed at about $840. The shaft is now down some 45 feet from the 230 foot level, and at a depth of 300 feet from the surface a new level will be opened. Receipts of bullion from this mine for the past month amounted to $35,000. Belcher is in better favor and has been actively dealt in at enhanced rates, advancing from $720 to $800, receding to $780, rallying to $875, and closing at $840 bid. Some 68 feet were sold within this range.

Ophir has been steadily maintained at $480@490, and closes at $490 asked. The second trial of the Moscow *vs.* this company is now progressing. The Woodworth Mill, on the Carson, is in good condition again, and running up to its full capacity of 30 tons per day. The receipts of bullion thus far for the current month amount to $26,500. The company are drifting at a depth of 580 feet from the Mexican shaft, into the ledge directly west, and then propose to go south on the ledge. Hale & Norcross is in more favor, and rose from $500 to $600, closing at $600 bid.

Chollar advanced from $330 to $370, fell to $342, and sold yesterday at $465@$450. Potosi rose from $325 to $350, receded to $320, advanced to $365, and was dealt in at the close at $440@445. The work of development continues with vigor in these claims, and it is said that a body of good ore has been disclosed in the lower level of the Potosi.

Uncle Sam has been quite a feature of the market this week, and some 600 shares were sold, advancing from $265 to $390, dropping to $300, and changing hands yesterday at $265@$235. Overman has shared in this improvement, advancing from $270 to $360, and closing at $295@$300. Important developments are reported in this mine. In running 130 feet north from the shaft in the lower or 500-feet level, a vein of ore fifty feet wide has been disclosed in the cross-cut, and in drifting in the same direction 150 feet from the shaft, in the 406-feet level, a large body of ore has been found. In the 225-feet level indications also point to a continuation of the same deposits found below.

Imperial has been well maintained, and 610 shares were sold, advancing from $235 to $250, receding to $235, and selling yesterday at $238@$237½. Advices from this claim continue favorable, and the receipts of bullion are likely to be largely increased this month. The company have accumulated a reserve of some 1,000 tons second-class and more than 100 tons of first-class ore. For the latter $350 per ton has been offered at the mine, but it is expected to yield $450 per ton. About 100 tons, in all, per day are now hoisted to the surface and both mills are actively employed.

Bullion was sold at $175@$180, and closed at $180. North American rose from $27 to $60, fell to $47, and sold yesterday at $35@$44. Baltimore American rose from $15 to $35 and sold at the close at $25. Baltic rose to $27½, dropped to $20, and closes at $25. Moscow closes at $30.

The aggregate sales of Stocks and Legal Tender Notes since Saturday last, amounted to $1,397,442.

SALES OF THE WEEK

BY THE S. F. STOCK & EXCHANGE BOARD.

Saturday, July 8.

5 shs Savage at 1450@1420 per foot.
1 sh Savage at 1420 per fool, s 3.

THE GOLD LAKE OF 1850.

All old Californians will remember the Gold Lake excitement of 1850, and the numerous stories of its gold covered bottom, etc. Our own recollection of the excitement is a somewhat vivid one, although we were not one of the duped. The lake was actually found by many who went in search of it, and some gold was found there; but the reality fell so very far short of what the seekers had been led to expect, that nearly all left with the utmost disgust and indignation, and most of them without striking a pick into the gravel. The *Mountain Messenger*, of July 1st, however, says that the identical lake has been worked for several years past, with very fair success. The lake is about twelve miles from Downieville, and parties who are familiar with the locality assert that there is a large scope of mining country there that only needs developing to pay well. The mines in that vicinity are what are called ground sluice diggings, the bedrock being only a few feet from the surface and easily worked. The gold is all quartz gold, and from the appearance of the specimens has never traveled far. This section abounds in quartz ledges, in many of which the gold is visible, and others that prospect well. Some of the claims there have been worked for several years, and the diggings now average, according to the *Messenger*, about $27 per day to the hand. That is what we should call pretty good pay, but still the *Messenger* is very particular to caution people against going there, on the ground, however, that the diggings are too close by, and do not present obstacles sufficient to create risk enough to make it worth their while, and suggests a prospecting trip instead along the line of the Russian Telegraph. The *Territorial Enterprise* with reference to the above, says:

There may be *a* gold lake within twelve miles of Downieville, but it is not *the* gold lake of 1850. That was located by the current reports of the day somewhere near the head of the North Fork of Feather river. In attempting to reach it, not less than five or six hundred lives were lost in the spring of 1850. The story first found currency during the winter of 1849-'50, and early in the spring, before the snows had melted on the mountains, thousands of adventurers were on their way to the new El Dorado. As the story went at the time, the lake was twenty or thirty miles in circumference, and the sands along its shores were heavy with gold. A lake was found somewhere in Plumas county, in 1851, on the shores of which good prospects in fine gold was obtained; but the Gold Lake excitement originated in a hoax. Tom Stoddard, a romantic and rather weak minded miner, overheard a conversation concerning this imaginary gold field, which conversation was doubtless "cooked up" for his especial benefit, and he at once announced himself as the discoverer of the wonderful lake, and undertook to pilot a party to it. He led the adventurers over hundreds of miles of mountains, and finally left them in the wilderness, and thus escaped hanging. Tom is now in Nevada. We meet him occasionally. He talks no more of Gold Lake, but refers mysteriously to fresh discoveries scarcely less wonderful.

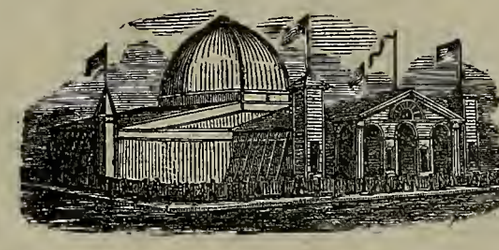
NEW COPPER SMELTING WORKS.—The Stockton *Independent* says: We see with satisfaction that the impetus lately given to this new species of industry by our townsman, C. T. Meader, is already bringing its fruit. A few days ago we described the establishment of the Taunton Smelting Works at Campo Seco; today we are informed that Ralph Emerson, Secretary of the Antioch Copper Smelting Company, is about to establish works for smelting the ores of the "La Victoire" mine, in Hunter's Valley. Work is to proceed immediately.

JAMES GORDON BENNETT, of the New York *Herald*, is over seventy years old. He leaves the management of his paper almost entirely to Mr. Hudson, who has been its editor for more than twenty years, and who may be found day and night at his desk, living and thriving in an atmosphere of intense work.

MYSTERY magnifies danger, as the fog the sun. The hand that unnerved Belshazzar derived its most horrifying influence from the want of a body; and death itself is not formidable in what we know of it, but in what we do not.

THE California soldiers who left recently for Arizona, either by accident or gross negligence, fired the Salinas plains. The fire raged five or six days, consuming several leagues of good pasture land.

THE FIFTH INDUSTRIAL FAIR



OF THE MECHANICS' INSTITUTE OF SAN FRANCISCO,

To be Held in the Mechanics' Institute Pavilion in August, 1865.

The Mechanics' Institute having determined to hold their Fifth Industrial Fair during the coming season, the Executive Committee would respectfully invite all persons desirous of exhibiting Machines, Manufactures, Agricultural Implements, Horticultural Products, Minerals, Ores, and Works of Art, to make application immediately, in order that the proper space may be allotted them.

The Exhibition will be open to the public on Thursday, the 10th day of August, at 10 o'clock A. M.

The general management of the Fair is entrusted to an Executive Committee, consisting of the officers of the Institute.

No contracts or agreements will be recognized unless made by the authorized agents of this Committee.

A competent person will be in attendance at the Pavilion to receive and register all goods designed for exhibition, and will receipt therefor.

Contributions of Machinery and other articles that require long time to prepare for exhibition, will be received from the 15th of July to the 2d of August.

Articles for exhibition that require large space may be entered on or before the 20th day of July, and space will be allotted to the exhibitor on or before the 2d of August.

The Picture Galleries will be ready for the reception of Pictures, Embroideries, Wax and Fancy Work of all kinds, on the 1st of August, when space will be allotted.

The Committee will be prepared for the reception of Fruits, Flowers, Agricultural and Horticultural Productions, and design to have the tables so arranged that the best display possible can be made in this department, and every effort will be made and care taken to preserve their freshness, so that exhibitors may receive full credit for their productions. Those wishing space on these tables should engage it at an early day. There will be space reserved for additions in this department during the Fair.

The several transportation companies, as on former occasions, have, with commendable liberality, consented to transport articles intended exclusively for exhibition free of charge, and Messrs. Wells, Fargo & Co., in like manner, will take charge of them.

The Committee have the fullest confidence that the coming Fair will not only be the most complete and varied in its character, but will also be more attractive than any previous exhibition of this kind on this coast.

No pains or expense will be spared to give the contributors satisfactory opportunities in the spacious pavilion of the Institute for the display of their contributions, and to furnish whatever may be necessary to make the Fair an institution where those who frequent it may be both pleased and instructed.

All articles forwarded should be labeled "For the Industrial Exhibition," San Francisco.

All communications to be addressed to C. S. HIGGINS, Corresponding Secretary.

NOTICE.

The co-partnership heretofore existing between John Youngberg, Stephen H. Covert and William B. Gleason, is hereby dissolved by reason of the said Gleason and Covert having left for the East. This is to notify all persons that I shall pay no debts contracted by the said parties from and after this date. JOHN YOUNGBERG.

San Francisco, May 15th, 1865. 20v10-1m

New Volume

—OF THE—

Mining and Scientific Press

Issued every Saturday. Each number contains 16 pages and 64 columns (size of Harper's Weekly).

PUBLISHED BY

DEWEY & CO.,

Patent Agents, Publishers and Job Printers,

505 Clay Street, San Francisco.

THE ELEVENTH VOLUME

Of the MINING AND SCIENTIFIC PRESS commences under advantages most gratifying to its publishers, who assert, with pleasure, that a continued improvement in this journal may be anticipated by its numerous and rapidly increasing readers.

We shall continue to devote a large space in our columns to the various and best methods of treating ores and saving gold and other precious metals in every form, furnishing valuable hints to millmen, prospectors, oil-workers and miners generally, not to be found in any other publication.

New machinery, latest inventions and discoveries, and all matters pertaining to the mechanical, manufacturing and industrial resources of the Pacific States, will receive careful attention.

Stock market reports will be published as received from the official records. Our carefully compiled "Mining Shareholders' Directory" will prove a faithful monitor to parties holding stock, and a desirable record for reference to brokers.

Friends pleased with our efforts in the publication of the PRESS can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and News-dealers, acting as our agents, will receive liberal commissions.

☞ BOUND VOLUMES FOR SALE.—☜

SUBSCRIPTION IN ADVANCE.

One Year, (two volumes)	$5.00
Six Months, (one volume)	3.00

FOR ADVERTISING

Our terms are very reasonable. MINING COMPANIES are especially favored by our rates, and careful attention is given to the legal publication of MINING NOTICES.

DEWEY & CO., Publishers.

S. W. H. SMITH, ... W. B. EWER ..... A. J. DEWEY.

1852. 1865.

Thirteenth Year of Publication.

THE GOLDEN ERA.

Founded in 1852.

The oldest Weekly Paper in the State, permanently established, and more widely circulated at home and abroad than any other on the Pacific Coast. In California, the Atlantic States, and throughout the entire field of its great and rapidly increasing circulation, THE GOLDEN ERA is universally regarded as a Literary and Family Journal of unequalled excellence. Among its contributors are all the best writers on this side of the Continent, and correspondents of distinguished ability in New York, Paris and London.

Liberal Terms to Clubs.

THE GOLDEN ERA is furnished to CLUBS at the following rates: Three Copies, one year, Ten Dollars; Five Copies, one year, Fifteen Dollars; Ten Copies, one year, Twenty five Dollars. An extra copy will be forwarded, free, for one year, to the person sending a club of five or ten subscribers.

THE GOLDEN ERA is now enlarged by the addition of eight columns to its pages—and presents fifty-six columns, containing the greatest possible variety of Valuable and Entertaining, Original and Selected Matter, all combining to render THE GOLDEN ERA a Literary and Family Journal of surpassing interest and attraction; a Welcome Guest in Cottage and Cabin; the favorite at the fireside in City and Country, the most useful, agreeable altogether desirable publication for California readers and their kindred and friends in the Atlantic States, Europe, and elsewhere. Every Household in the Mountains and Valleys, the Cities, Towns, and Mining Camps of California and throughout the Pacific States and Territories, should receive and welcome THE GOLDEN ERA as a regular weekly visitor.

Serial Romances in The Golden Era.

The most popular Novels of the present day published as Serials, from week to week, in the GOLDEN ERA, from advance sheets, simultaneously with their appearance in the English and Atlantic Periodicals.

Among the contributors to the GOLDEN ERA are all the prominent writers of Literary Repute in California and on the Pacific Coast, also correspondents and contributors of distinguished ability in the Atlantic States and Europe, comprising an array of Talent and Genius unapproached by any Literary Journal in California, the Atlantic States, or Europe.

IN THE GOLDEN ERA,

"THE FAIR LILIAS;"

Or, "LIFE IN DEATH,"

A New Story, by PIERCE EGAN, Author of "The Poor Girl," "The Flower of the Flock," "Lady Maud," "The Snake in the Grass," "Such is Life," Etc.

PIERCE EGAN is undoubtedly the most fascinating and attractive Novelist of the age. His stories are eagerly sought for, read and admired by hundreds of thousands in England and America. "THE FAIR LILIAS; or, Life in Death," surpasses, in exciting interest and thrilling situations, all of the productions of the celebrated author, and is Pierce Egan's masterpiece.

THE GREAT SERIAL,

"OUR MUTUAL FRIEND,".....By Charles Dickens.

"THOUGHTS AND THINGS"

APPEAR WEEKLY IN THE GOLDEN ERA.

To Mail Subscribers.

THE GOLDEN ERA for One Year	$4 00
THE GOLDEN ERA for Six Months	$2 00
THE GOLDEN ERA for Three Months	$1 00

Sent from the Office to any Address in California and Oregon—Nevada, Washington, Idaho, Utah and Colorado Territories—the Atlantic States, Europe, and all parts of the World.

Take care to write distinctly the name of the person, the name of the city, town or locality where the post office is situated, and the name of the County and State, in order that the paper may be fully and accurately directed to every address.

AGENTS in every part of the State receive subscriptions for the GOLDEN ERA.

POSTMASTERS in California, Oregon, and neighboring Territories obtaining subscriptions for the GOLDEN ERA and forwarding the same, with name and address of the subscriber, will be allowed a very liberal commission therefor.

Liberal Terms to Clubs.

Three copies, one year	$10 00
Five copies, one year	$15 00
Ten copies, one year	$25 00

Now is the Time to Subscribe.

TO ADVERTISERS.

Best Advertising Medium.—The Golden Era is the oldest Weekly Journal in California, and indisputably enjoys by far the largest circulation in the city of San Francisco and in the interior of the State.

THE GOLDEN ERA

Is universally read in every city, town, village and mining and agricultural precinct in California, and offers unusual and unequalled advantages to those who desire to bring their business prominently before the community. Only a limited space is devoted to advertising. All advertising pages are also largely occupied with fresh and interesting reading matter, and no advertisement can escape attention. The charges for advertising are not so large, proportioned to the benefits derived, as those of other papers. Liberal terms will be made with those who advertise for three or six months, or by the year.

It is Impossible for editors to know all the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides and the evidence of any error which may appear will be received in friendship and treated with respect.

American and Foreign Patents.—Letters Patent for inventors can be secured in the United States and foreign countries through the Mining and Scientific Press Patent Agency. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past two years.

Favorable to Inventors.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the Mining and Scientific Press, free of charge. It in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

Payment in Advance.—This paper will not be sent to subscribers beyond the term paid for. The publishers well know that a good journal cannot be sustained on the credit system.

San Francisco:
Saturday Morning, July 15, 1865.

Removal.

The Office of the Mining and Scientific Press has been removed to the old printing stand known as Waters Bros. & Co., southwest corner of Clay and Sansome streets, opposite the Niantic Hotel (being one block south of our former location), where we may now be found, with more commodious apartments and an extensive Job Printing Office.

San Francisco, April 10th, 1865.

Canvassing Agents.

We would call attention to the following named agents of the Mining and Scientific Press as gentleman worthy of the countenance of any community which they may visit, and assistance rendered them in their efforts, by friends and old patrons, or our brethren of the Press, will be acknowledged as a personal favor to us:—

Mr. Robert Lattimore—Amador and Alpine counties and the State of Nevada.

Thos. Poyzer, of Grass Valley, for Nevada, Yuba and Sierra counties.

The Largest Refracting Telescope in existence is about to be put up at the Chicago University, Michigan. It has been manufactured by Alvin Clark, of Cambridge. Compared with the one at Harvard, the next largest, the Chicago instrument is as thirty-four to twenty-one. The objective glass is eighteen and three-quarters inches in diameter, with a focal length of twenty-three feet. Capt. Gillis, of the National Observatory, at Washington, writes of it, that "the eyes of the whole scientific world are turned to Chicago, awaiting the results. When the instrument is properly mounted and manned, no one can predict its future." When first completed, the object-glass was inserted in a rude board tube and drawn down by means of tackle, for trial. In thus sweeping the heavens, it caused at once a discovery for which it received the most favorable notice of foreign scientific associations, and also took the largest astronomical reward at Paris—the Lelaud prize of five hundred fraacs. It is a matter of just pride and congratulation that this instrumeat was manufactured by one of our countrymen.

Dangerous Counterfeit.—A counterfeit $100 greenback has been detected in Boston. It passed as genuine through several of the banks, but was finally inspected, and fully proven to be a counterfeit only on being taken to the office of the U. S. Sub-Treasurer. The unexpected appearance and so perfect imitation of this counterfeit will be likely to seriously disturb the circulation of that entire denomination of legal tenders.

Treasure.—The treasure receipts at this city for the first half of the present year were $29,225,007, being $2,039,882 more than during the same period, last year. The exports during the same time have been $21,591,693, being $7,249,147 less than during the same period of 1864. From the above figures it will be observed that the increase of treasure during the past six months has been $9,281,029.

THE NEW EXCELSIOR DISTRICT.

This district still appears to attract a large share of attention from both sides of the summit. According to the *Territorial Enterprise*, the general formation of the region is granite. In this formation a vast number of leads of all sizes are found. There are in the vicinity numerous lakes and mountain streams and an abundance of timber. In the soil about many of the leads from 25 cents to $4 (?) to the pan may be obtained. All who have claims there appear to feel very sanguine with regard to their value. A man who has been working about the reservoir and has spent most of his time in that section, says that during the past year he has noticed no less than eleven heavy shocks of earthquakes there. Everything shows that there have been heavy quakings of the earth and many volcanic eruptions in the vicinity. South of the Eclipse mine is a small lake, in the center of which is to be seen standing a large pine tree, half the length of which is buried under the waters of the lake. Our readers will recollect the description of a bottomless lake, in that vicinity, which we gave last week. A gentleman who lately visited the locality, says that the springs near Say's Station have again been on the rampage. He says the largest springs threw up a huge column of water, in his sight, to the hight of twenty feet. With the water, flames also came up. A blaze of fire is said to have been spouted from this spring, last year, to a hight of sixty feet.

The Lake Tahoe Water Project, which was at first supposed to be a mere "flyer," is now said to be an earnest proposition. The parties, it will be recollected, propose to turn the surplus water from Lake Tahoe, to the western declivity of the Sierra, which must be done by a tunnel three or four miles in length, and convey it to Sacramento, Stockton, and this city. There will also be enough water for extensive irrigation of farm lands, as well as for mining purposes, along the route. Those engaged in the scheme have faith that the enterprise will prove a financial success. They will proceed immediately to make the necessary surveys, estimates, etc. It is decidedly the most stupendous water-works enterprise ever undertaken in the history of the world. There are no engineering difficultics to be overcome, but such as can be met by a reasonable outlay of capital; although if carried out it will prove the most costly and stupendous water-works enterprise ever yet undertaken in any age of the world—for that reason, perhaps, it will be just the enterprise to be undertaken and carried through by Californians. Fifty years hence it may pay as an investment.

The Heroic Age of the Republic.—Rev. Dr. Bushnell, of Hartford, Conn., in speaking of the majesty and strength of our Government, as manifested in the great struggle through which it has just passed, uttered the following impressive thought:—

We did not know how strong it was before. Nobody had any conception of the immense strain it could bear. How bright is the future now of such a Government and nation! Hallowed by so many battle-fields, and these by the tribute of so many histories, and sung by so many songs of the great poets of the future, how dear, and sacred and glorious it will be! And God be thanked, it was our privilege to live in this great day of crisis, this always to be called heroic age of the republic.

Change.—The Hon. C. B. Porter, of Contra Costa, and agent of the last Industrial Fair at this city, has purchased the interest of M. W. Theobald, in the Contra Costa *Gazette*. We welcome friend Porter to the editorial tripod.

Horrible Death.—Joseph Grecubauer, of Iowa Hill, committed suicide a few days ago by drinking a glass of sulphuric acid.

The Sacramento Bee has entered upon its 18th volume. The *Bee* is one of our most valuable exchanges.

The largest deposits of anthracite coal in the world are in Pennsylvania—the mines of which supply the market with millions of tons annually, and appear to be inexhaustible.

SULPHURET WORKINGS IN AMADOR.

According to the Amador *Ledger*, there are two establishments for working sulphurets in Amador county; one of them, however, from some cause unknown to the *Ledger*, is not working at present. The other is known as the Mannon Mill, and is located on Sutter creek, just above the town of that name. The mill was erected in the winter of 1863, since which time it has been in constant and successful operation. It has a capacity for reducing the sulphurets obtained from about fifty tons of rock daily. Like other "institutions" of this kind, the process of working is only known to the proprietors, the public being permitted to see only the outside works. The ore is concentrated in sluices and boxes, at the quartz mill, where the rock is crushed. It is then salted down, and left lying in bulk in the open air until it becomes thoroughly oxydized. The reducing machinery consists of two large Wheeler pans, used for grinding, and twelve Knox pans for both grinding and amalgamating. The owners of this mill, S. S. Mannon and A. H. Rose, inform the *Ledger* that, unless they should greatly enlarge their mill, they have now on hand a sufficient quantity of material to keep the same running for two years. It is a matter of no inconsiderable interest to notice the increased degree of attention that is beginning to be paid to the working of sulphurets, and indeed to a more thorough working of our gold quartz generally. There is no question but that nearly as much gold has been suffered to run to waste, from our quartz mills, as has been saved; and for all these millions the State is just so much the looser. The mill-men who have taken the precaution to save their tailings will yet be enabled to recover a large portion of this waste; but much of it has gone irretrievably, with the rush of water that is constantly proceeding from their batteries, and the tons of quicksilver that has been allowed to escape from the mills. It is time that our mine owners learned that amalgamating is a science that cannot be learned in a week or a month, and should no more be trusted to unskillful hands, than to those whose honesty there may be good reason to doubt.

The Sanitary Commission has entered upon a new and noble work, since the close of the war. It is well known that the moment the Government discharges a soldier, that moment he is left to shift for himself, the best he can; and as a general rule he is beset with a class of merciless land-sharks, who, under the pretext of assisting him in securing his claims against the Government, rob him not only of what little money he may have, but of his claims against the Government also. Of course there are honorable exceptions among those acting as Pension and Claim agents; but to obviate any danger of such wrongs accruing to the enrolled soldier or his needy widow, the Sanitary Commission has now volunteered its assistance to prosecute and secure such claims, free of cost, to the soldiers' widow or orphans. The work is a noble one, and in addition to the further labor of looking after the soldiers and soldiers' families who are in need of assistance, is a fitting climax for a work of philanthrophy which, for magnitude and comprehensiveness of detail, has never been equalled in the history of the world.

Death from Eating Rhubarb Tops.—The Nevada *Transcript* says that a child of James Condon, who resides near Washington, died on the 4th inst., from the effects of eating rhubarb tops which were cooked with bacon, very much as cabbage is prepared. The child and others of the family who eat of it were taken with vomiting, and the little one died in a short time. We have heard of several instances where persons have been made sick from eating rhubarb tops improperly cooked.

Butler's Canal.—The canal at Dutch Gap, cut by order of General Butler, allows passage for vessels drawing seven feet of water, and is now regularly used by such steamboats and other craft as do not draw over that depth.

A New Beecherism.—At a recent temperance meeting held in Elmira, N. Y., Rev. T. K. Beecher, a brother of Henry Ward, took position in favor of the use of ale and wines, as a prophylactic for intemperance. He said that he had so taught from his pulpit, and he should do it again, that he had a barrel of good ale in his cellar, and that if we formed a temperance organization on the basis of total abstinence, we should act contrary to science and so contrary to God, and should consequently fail.—*Eastern Exchange.*

The above is a singular doctrine to be put forth by a minister of the gospel, even from one of so eccentric a class as "the Beechers." The idea that ale, as a beverage, promotes temperance, or that abstinence therefrom is contrary to science, argues very little of either judgment or philosophy in the reverend gentleman. However useful ale may be as a tonic, the fact is nevertheless, incontrovertable that, as an habitual beverage, the use of malt liquors is prolific of disease; producing corpulency, obesity, vertigo, apoplexy, and various other diseases of the heart and head. Its use, except as a medicine, is therefore clearly contrary to science. If any alcoholic stimulus must be used, the pure juice of the grape is much preferable; although *pure cold water*, nature's own beverage, will be found far more promotive of health, long life and clearness and vigor of intellect than any fluid ever devised by the most cunning researches into the *arcana* of science.

The American Artizan.—This excellent journal, published weekly in New York city, has just commenced a new volume and "new series," as well, as it has enlarged from an eight to a sixteen-page paper. We find the *Artizan* an almost indispensable exchange. Its columns are replete with valuable scientific and mechanical information, well and carefully prepared, and in just the form and manner best calculated to interest and instruct the masses. It gives a weekly list of patent claims, and should have a large circulation in every State in the Union. It is published by Messrs. Brown, Combs & Co., New York, at $2.50 per year.

Deep Mines.—The deepest mine in America is the coal mine, on the Sugar Loaf Slope of the Diamond Coal Company, in Pennsylvania, which is 970 feet perpendicular depth, with 3,000 feet slope. It has been worked about thirty years. This mine is only *ten* feet deeper than the Eureka gold mine, at Sutter creek, Amador county, in this State, although the incline is much shorter in consequence of the great dip of the vein.

The Union Copper Mine, at Copperopolis, during the month of June, shipped from the mine to San Francisco, *via.* Stockton, the large amount of 3,600 tons of ore, the freight money on which was $29,000. The amount of pig copper and copper matte shipped during the same time, from Meader's Smeltiag Works, was fifty-eight and a half tons.

The Nye County News, which had to succumb some time since to the "hard times," has been revived with good prospect of success and usefulness. It is published by Joseph E. Eckly, at Ione, Nye county, Nevada, and promises to be an important aid in the development of that section of the Washoe silver region.

Gone North.—Messrs. Colfax, Bross & Bowles left this city on their way to Oregon and British Columbia, on Monday last, *via.* Marysville and Red Bluffs. They will return by sea, arriving here about the 1st of August, and leave the middle of the month for the East *via.* Panama.

A Pin-Eating Hen.—The Northampton, Mass., *Gazette* tells of a hen recently killed in Amherst, in whose gizzard was found not less than *thirty-six* pins, which hiddy had swallowed, with apparently no effect whatever. William Manly, of Florence, who took them out, has the pins now in his possession.

The Mariposa Gazette has entered upon its tenth volume. May it witness many more returns of its natal anniversary.

PETROLEUM MATTERS.

The work of developing the California oil interest is going rapidly forward, and with the most encouraging success. New organizations are constantly heing effected, and generally with the view of immediate active operations. During the past week we have received higbly favorable reports from Humboldt county. Although the report which reached the city, on Saturday last, that the Union Mattole Company had struck a flowing well has proved incorrect; there is the best of reason for believing that it is only premature, and that the company actually has such a well within immediate reach. The actnal condition of affairs at this well may he learned from the following article from the Humboldt *Times*, of last week:

"It will be remembered that shortly after the "strike" made hy this Company, at a depth of only about eighty-five feet, the well commenced caving badly, and to such an extent as to seriously interfere with the work of extracting oil. The Company then determined to cease further operations in this well, only doing sufficient to preserve it from greater damage from the same cause, and accordingly commenced thereat. In this they descended, as we are informed, to nearly the same depth reached in the first, when the presence of oil was discovered, and further progress was interruped by the well-hole, for some cause not explained, becoming out of plnmp. Operations were thereupon again resumed at the old well, which they bored to the depth of about one hundred and fifteen feet, when another vein of oil was tapped. For a number of feet before reaching this depth, the quantity of oil coming into the well seemed constantly to increase, and at the point indicated it was evidently more than double that ever obtained from it before. Moreover, there was every reason to believe, from the indications that were presenting themselves, that the depth could be increased but a short distance before a flow of oil would be obtained. The indications which led to this opinion are stated to be: the great volume of gas which escaped from the well, the hight to which the oil had risen, and the disturbed sound preceptible in it, all of which increased in proportion as the drill deeended deeper. On Tuesday morning the oil stood in the well-hole to the depth of sixty feet, and was still slowly rising. We learn that the few kegs and vessels which were at hand were filled with oil at once; but not being prepared with the means for taking care of more, the Company have been obliged to suspend work untill tanks or some other suitable vessels can be procured for the purpose. * * * We have just learned from the President of the Company, who arrived in town yesterday, that in taking out one hundred gallons of oil from their well, the depth of the oil was decreased only about six feet. When he commenced taking this out there were sixty-one feet of oil in the well.

From this statement it would appear quite evident that the company has abundant reason for believing that they have a large supply of oil within their reach, and that it would be folly to prosecute their work any farther until they had made ample preparations to secure any reasonable flow of oil as soon as it might make its appearance. This, we understand, the company are doing with all reasonable dispatch. As yet, no water has made its appearance in either of the wells—the flow being oil exclusively.

The Paragon company, whose claims adjoin the Union, have their tools already on the ground. The superintendent goes up on the next boat, and will commence active operations as soon as he arrives. The location of this claim is equally as favorable as the Union. the proprietors entertain no doubt whatever of being able to strike oil at the same depth as their neighbor.

One great drawback is the difficulty which at present exists through want of suitable roads for getting the oil to market. Arrangements, however, are already in progress for the early construction of such indispensable conveniences. Two or three parties are also about to put up saw mills, to meet the demand for lumber, which the new condition of things in that county will require in abundance. There is an abundance of timber, convenient for lumber and for barrels, which will be made upon the ground as soon as the demand is proved to be sufficient in extent and permanence to warrant such an enterprise.

From Colusa we also receive highly favorable reports. Mr. J. Sevenoaks came down on Thursday from a tour of observation in that county. He informs us that he has made a purchase of the Emerson Springs, in Bear Valley, and will send up machinery for boring immediately, with the proper supply of tubing. Mr. S., after digging out the spring a little, was enabled to gather up about five gallons of the oil, from its natural flow, which will arrive here on Monday or Tuesday. The oil burns quite freely in its crude state, in the ordinary kerosene lamp. Mr. S. feels very sanguine of being able to obtain a large supply of oil at a very moderate depth.

The company owning the Botts' Spring are now down about thirty feet, with a large quantity of oil, mixed with water, in their well.

Capt. Rowe, on Sulpbur Spring Creek, is down 110 feet; has oil in the well, which he thinks can be developed into a good pumping well. He is now putting up a pump, which will be ready for work in a few days, to test the yield of oil. Quite a number of new parties are about starting in to bore in various parts of the county.

We have seen a letter from the Adams' well, Mt. Diablo stating that the engine is all ready to commence work. The pump had been accidentally dropped into the well, but would be got out without difficulty, and the flow of oil thoroughly tested.

We hear nothing new from the wells about Lexington, in Santa Clara county. The Arthur Ranch well, owned by the Uvas Creek Co., and in charge of Mr. Sevenoaks, is now down fifty-five feet, with very encouraging indications.

ST. IGNATIUS COLLEGE.

This institution, located on Market street, in this city, has recently received large additions to its apparatus for the illustrations of the arts and sciences there taught. At the invitation of Rev. Anthony Cichi, the resident Professor of Natural Philosophy, Chemistry and Geometry, we recently paid the institution a brief visit for the purpose of examining its philosophical apparatus, mineral cabinet, etc. We found the chemical laboratory well furnished with all that is necessary for the most complicated manipulations and analyses. We noticed, among other things, a "spectrum," the instrument recently devised for determining the presence and character of metals by their fusion or volitization—a process now denominated "the spectrum analysis"—a very simple and convenient form for making qualitative analyses. We also noticed a new and complete optical apparatus; also a well assorted mineralogical cabinet, especially designed for use as ocular demonstrations in the study of mineralogy and geology. The design of this Institution is to give a thorough, classical, mathematical and philosophical education; and to this end the instrumeats and apparatus provided are most ample for a thorough illustration of the arts and sciences, and a complete manipulation of all the various processes connected with the study of metallurgy and chemistry. There is also connected with the college, in a separate building, a complete apparatus where photography, in all its branches, can be taught, not only in theory, but in practice, as well, which makes all things perfect. We are pleased to learn that the Institution is in a highly prosperous condition. It was incorporated in April, 1859, and its fifth annual collegiate year commences on the last Monday in August next.

California Patents Recently Granted.—An Improvement in Shafting, by Franklin Peregoy, of Indiaa Valley, Plumas county; A Wire Cutting Machine, by Lewis W. Jobauaing, of San Fraacisco; A new mode of Raising Snaken Ships, hy Austin F. Page, of Weaverville, Trinity county. All of the above patents were obtained through the Mining and Scientific Press Patent Agency. A patent has also been granted to Harvey L. Lowman, of Virginia City, Nevada, for a new Miniug Pick.

Bullion.—The amount of bullion shipped from the Gold Hill office of Wells, Fargo & Co., for the quarter ending June 30, amounted to $594,630.37. For the month ending June 30, the shipments amounted to $246,725.62.

MINING SHAREHOLDERS' DIRECTORY.

List of Notices of Meetings, Dividends, Assessments and Delinquent Sales.

Comprising the Names of Companies, District or County of Location, Amount of Assessment; Date of Meeting, Delinquent Advertisement and Sale, and Amount and Time of Payment of Dividends.

COMPILED FOR EVERY ISSUE.

Advertised in the Mining and Scientific Press and all other San Francisco Journals*.

Mining Summary.

CALIFORNIA.

The semi-annual returns of trans-shipments from this port afford the most gratifying evidence of the increasing prosperity of our mining interests. The figures for the past three years show a growing ratio of increase of the metallic product, with a corresponding decrease in the exports, giving evidence of an increasing tendency of capital to seek for investment on this coast, and proving that, although we may not he advancing in population as rapidly as we could desire, still we are making steady and healthy progress in material wealth.

Nevada County.—We still continue to receive encouraging accounts from this important locality. According to the *National*, the Coe company have struck a rich ledge on their extension of the Eureka ledge. They have the ledge at a depth of 130 feet. The Kate Hayes company have also struck very rich rock, about thirty tons of which has been raised, which it is thought will pay from $75 to $100 per ton. They have probably by this time put on a large additional force of hands, with which they will prosecute the work with additional vigor.

The town of Washington, according to the *Transcript*, is now one of the liveliest camps in the county, rendered so by the excellent success which has recently attended mining operations in the neighboring good diggings on the Yuha. Large amounts of gold are now being taken out there.

The Mohawk claim, on Gold Flat, is now yielding splendid rock. Forty tons crushed at

Palmer's mill, last week, yielded $40 to the ton. The mines at Quaker Hill are paying well. The claims of Jacobs & Surgent are yielding large amounts. The result of the last ten days was $1,800. The claims are very extensive and will pay for years to come.

It is stated that the "Homeward Bound" claim, near Grass Valley, has been sold on private terms to parties in this city. The report that the "Emperor" had sold his—the "Eureka" mine—for $400,000, is contradicted. It is said that $60,000 have been realized from this mine the past month. The claim owned by H. Barnett and Geo. D. Roberts, near Union Hill, has been sold for $200,000.

SIERRA COUNTY.—We condense the following items from the *Messenger*: A company from Eureka are about to commence prospecting the old Craycroft diggings on the ridge between the North and Middle forks of the Yuba river. These diggings paid very well at one time, but have been abandoned since the Frazer river excitement. The last clean up of the Kanaka mill gave some nine thousand dollars as the result. The Union Quartz Company, at Wet ravine, have got the ledge after one year's labor, running a bed rock tunnel which cost them from five to twenty dollars per foot. The ledge is very rich, and it is said they realized $57,000 for twelve days' run.

A valuable quartz discovery is reported at Jackson's Ranch, on the Henness Pass road. Several ledges have been discovered, showing free gold in abundance. Extensive preparations are being made to start the Gold Valley Quartz Mill. They have a fine mill and ledge, that will supply any amount of quartz that assays from $40 to $200 per ton. The difficulty has been to save the gold, which is all in the sulphurets. Mr. Smith, the superintendent, proposes to try the roasting process. It will succeed.

PLUMAS.—The Quincy *Union* chronicles the following: Mining on the North Fork has taken a new start this season. There are over twenty new claims being opened. All of the "bank" claims are paying well. There are more men at work in that locality than there have been for years before. Fyheart & Co., at Humbug Valley, are at work in their claims, and are averaging about one-half ounce per day. Tripp, Cable & Co., on the North Fork, for one day's work of three men, took out eight ounces from their claim, one day last week. Their claim averages one ounce per day to the hand. The Cosmopolitan Company has made a contract with Messrs. Bolinger & Blood to furnish them with two thousand tons of ore from the Cosmopolitan (Northern) Copper Ledge.

It is reported that Bidwell & Co. intend building a large twenty-four stamp steam quartz mill, at Greenville, to work the quartz from the McClellan Ledge. Bidwell & Co's mill, located at Greenville, recently took out $17,000 in one month's run, with eleven stamps.

SISKIYOU.—The New York Quartz Company, two weeks ago, took out of their claims $900 in gold, and 500 lbs. of very rich sulphurets, in six days' run.

The Klamath *News* says the continued dry weather promises a great obstacle to successful mining operations on the Klamath during the coming Summer. The snow on the mountains is fast disappearing, the river falling, and the little streams upon which the miners depend for their supply of water are falling rapidly.

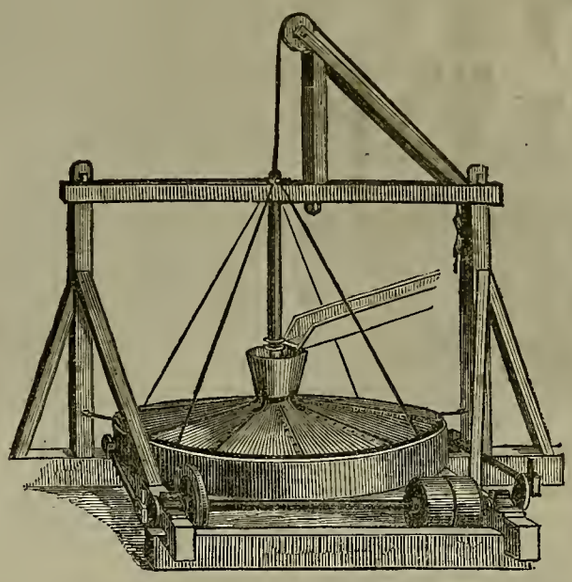
UNDENIABLE FACTS FOR THE MINING PUBLIC.

At the Exhibition in the Fall of 1864, the Mechanics' Institute awarded a Premium to

E B. PRATER,

FOR THE BEST CONCENTRATOR.



The proprietors of this Concentrator feel satisfied that IT HAS NO EQUAL IN USE. Large numbers of these Machines are now in successful operation in all parts of this State, Arizona, Nevada, Colorado and Mexico. The principle of this machine, which is designed for a Concentrator exclusively, is entirely new. It is designed for separating finely divided quicksilver, amalgam and gold from the sands, and for concentrating and saving the sulphurets, and is to be placed behind all or any other machine in use.

One of these Concentrators can be seen in operation at Messrs. Kimble & Murphy's Metallurgical Works, Bryant street, between Third and Fourth, San Francisco.

MECHANICS' FAIR.

DAILY PRESS.

The Proprietors of the MINING AND SCIENTIFIC PRESS having been granted the privilege of printing the DAILY PRESS at the Pavilion, during the approaching Exhibition, are making complete arrangements to publish a full and faithful record of the Grand Exhibition, and will present gratuitously to all visitors and exhibitors the LARGEST, most ATTRACTIVE and VALUABLE paper ever issued at a public fair.

Its Free and Extensive Circulation will render it a peculiarly desirable journal for advertising. From SEVEN TO EIGHT THOUSAND individuals visited the exhibition last season in a single day and evening.

Our printing press, in active operation, rapidly throwing off an interesting sheet into the very hands of the anxious throng, presents an attractive scene, affording one of the most novel and effective modes of advertising ever offered through the columns of a newspaper. Many persons being eye-witnesses to the printing of the paper, preserve copies as reminiscences of their visit to the Fair, while others procure bound volumes to be retained as a permanent record of the Exhibition, giving a further benefit to advertisers in addition to its wide circulation.

Those wishing to secure space for advertising in the MECHANICS' FAIR DAILY PRESS, will do well to make early application to the proprietors.

The funeral procession of Abraham Lincoln in the length of its passage, in the number of mourners, in solemnity, depth and extent of grief, surpassed all that had preceeded it. The one that came nearest to it in previous history was that of Alexander the Great. whose body was borne on a golden chariot from Babylon in Asia to Alexandria in Egypt.

If good people would but make their goodness agreeable, and smile instead of frowning, in their virtue, how many would they win to the good cause.

Moses Frank Convicted.—The jury in the case of The People *vs.* Moses Frank, for forgery, brought in a verdict of conviction finding him guilty as charged in the indictment.

A Cargo of California Minerals.—The British iron ship Viscata cleared on Thursday with a cargo of minerals for Swansea, including 1,000 flasks of quicksilver, 20 cases and 610 bags of silver ore, 24,976 bags of copper ore, and 10 bars of silver lead—the entire cargo is valued at $115,000.

Work either of the muscles or of the brain, is one of the conditions of human happiness. Without it there can be no wholesome enjoyment.

It has now been ascertained by measurement, that, during the bombardment of Charleston, shells were thrown into it, which did terrible execution, from batteries stationed seven miles and a quarter from the lines of the city.

Gen. Grant did not stir from his seat or remove his cigar from his lips when the powder boat exploded at City Point. "Military men ought never to be excited," he said.

THE PACIFIC IRON WORKS,

First & Fremont Sts., between Mission & Howard, San Francisco.

The proprietors of the above Works invite the attention of all parties interested to their greatly improved and unequaled facilities for manufacturing Steam Engines and Boilers, both Marine and Stationary, of any required size and pattern, Quartz Mills, Amalgamating, Pumping and Hoisting machinery of the most approved construction, Flour, Saw and Sugar Mills, Water Wheels, &c., &c. Our pattern list is most complete and extensive, embracing the late improvements in all classes of machinery adapted to use on this coast. We would call especial attention to the fact that we have secured the exclusive right of manufacture for the Pacific Coast of the celebrated Greene Engine, conceded to be the most economical and perfect working Engine now in use. We are also exclusive manufacturers of the celebrated

Bryan Battery, Varney's Amalgamators and Separators, Ryerson's Superheated Steam Amalgamators and Rotary Crushers, Stone Breakers, &c. Orders respectfully solicited.

Vulcan Iron Works Company

[ESTABLISHED 1850.]

First, Natoma and Fremont Streets.

IRON FOUNDERS,

Steam Engine and Locomotive

BUILDERS,

Boiler Makers, and Workers in Sheet Iron, Brass and Copper.

These Works have lately been increased by the addition of new shops on Fremont Street, doubling the capacity of the original establishment. Their facilities for turning out machinery promptly and efficiently, are now unequaled in the State. Their Boiler Works have also been enlarged correspondingly.

The Company are prepared to execute orders for all classes of Machinery and Boiler Work, such as

Mining, Steamship, and Steamboat Machinery,

Railroad Machinery, Locomotives, Car Trucks, Car Wheels, Housings and Irons; and Flouring Mills, Quartz Mills, Sugar Mills, Saw Mills,

Manufacturing Machinery of Every Kind.

Sole Manufacturers of

HEPBURN & PETERSON'S REDUCING PAN AND AMALGAMATOR

BETHUNE'S AMALGAMATOR;

HERSE & MOORE'S IMPROVED HOWELL QUARTZ CRUSHER;

BAUX & GUIOD'S AMALGAMATOR AND SEPARATOR;

FAUCHERY'S QUARTZ GRINDER AND WATER WHEEL;

JONVAL'S IMPROVED WATER WHEEL;

STEVEN'S PISTON PACKING RINGS.

They have also a large assortment of Patterns for Pumping and Hoisting Machinery, Gearing, Pullies, Water Mill Irons, Hydraulic and Screw Presses, Retorts, Furnaces, Grate Bars, House Fronts, Ornamental Fence Posts and Paling, Stove Ranges, etc., etc.

Quartz Stampers, Shoes and Dies, of the best Hard Iron. Quartz Screens of Russia Iron Punched to Order. 27

TRUE AND BEAUTIFUL.—Some one has remarked, with equal truth and beauty, that education does not commence with the alphabet. It begins with a mother's look, with a sister's gentle pressure of the hand or a brother's noble forbearance. With handsfull of flowers in green daisy meadows, with creeping and almost imperceptible earnets, with humming bees, and glass bee-hives, with pleasant walks in shady lanes, with thought directed, in sweet and kindly tones and words, to nature and acts of benevolence, to deeds of virtue and to the source of all good, to God himself.

BATS.—Don't destroy the bats. They do an untold amount of good in catching the night-flying moths, some of which are the parents of the most destructive worms and insects. Nor do they do any harm. There was a time when we, in common with most other boys, made a practice of striking down every bat we saw, with a sort of feeling that we were doing a good thing. It was a mistake, and we are sorry to have a single bat on the conscience. Bats do good and only good, and the farmer and the farmer's boy should be the last to harm them.

PROFANITY.—The vice of profanity wears its own inroad into the minds of the young, if they are not properly guarded in the commencement of their young career. The people of this land are certainly distinguished, to an extent unknown in other countries, by profaneness. A stranger might infer from the tone of popular conversation, from the exclamations of excited individuals, from the clamors of anger and passion, that we acknowledge the Almighty for no other purpose than that we might have a name to swear by, or a convenient expletive to fill up the chasms of discourse.

LUCKY OLD MAN.—Amos Kendall, who in his old age, amassed a fortune by investing in telegraphic stocks, has devoted the sum of $50,000 to the erection of a Baptist Church in Washington city, as a memorial to his deceased wife, who was a member of that denomination. Mr. Kendall retired from General Jackson's administration poor but now, at the age of eighty, enjoys, an income of $40,000 a year.

VALUABLE GUINEA.—Not long since, a boy in Boston found a guinea dated 1676—just a hundred years before the Declaration of American Independence. Shortly after the discovery, a New York numismatologist offered the boy's father one thousand dollars for the old guinea.

THE same person who owned the farm on which the fighting commenced at the first battle of Manassas, also owned the house in which General Grant and General Lee drew up the articles of surrender.

A BRONZE statue of President Lincoln, to cost $20,000 is to be placed in Capitol Square, Albany, N. Y.

NOTICE TO MINERS.

THE UNDERSIGNED WILL SELL

MINING STOCK

In Incorporated Companies and Unincorporated Mines, in San Francisco District and in El Dorado District, Arizona Territory. It is confidently asserted and believed by most practical miners that Arizona is the richest mining country in the world. Recent developments of these mines are now attracting the attention of capitalists, who have already erected several mills, and more are going there soon. Now is the time to invest to advantage, and obtain the rise that must soon follow. Those wishing to purchase soon can do so, on most liberal terms, by calling on MR. RODNEY CLARK, 338 Montgomery street (room No. 11), San Francisco, or on H. C. SKINNER, San Jose, California.

N. B.—Freight all the way by water at a cost of 4½ cents per pound.

H. C. SKINNER,

San Jose, California.

San Francisco, April 27, 1865. 17v10

THE

WHEELER & RANDALL

Grinder and Amalgamator.

In the engraving herewith exhibited, A represents the Rim of the Pan; B, Cross Frame; C, Legs; D, Gear; G, Driving Pulley; H, Muller; I, Driver; K, Dies; L, Shoes; M, Hand Wheel; N, Jam Nut, and O, Wings or Guide Plates.

The attention of the Public is respectfully called to these facts:

1st. That the Mechanical work accomplished by differently formed grinding plates, having the same diameter, weight, hardness, and revolving at the same velocity, is as follows, to wit:

The Mechanical Work of plane, circular plates of the usual ring form, is ninety-eight.....98

The Mechanical work of conical plates of the most approved form, is one hundred and ten.....110

The Mechanical work of Tractory-formed plates, as introduced in the invention of Wheeler & Randall, is one hundred and seventy-seven.....177

That is, the Tractory-formed grinding plates will reduce one hundred and seventy-seven tons of ore, the conical grinding plates one hundred and ten tons, and the plane circular grinding plates ninety-eight tons, to the same degree of fineness in the same time. Those using this invention certify that they thoroughly reduce five tons of ore, as it ordinarily comes from the wet battery, per day in each pan, four feet diameter, the muller making sixty-five revolutions per minute.

2d. That as a whole, the Wheeler & Randall Grinder and Amalgamator is one of the most simple, compact, substantial, convenient and efficient pans in use.

☞ Patent applied for.

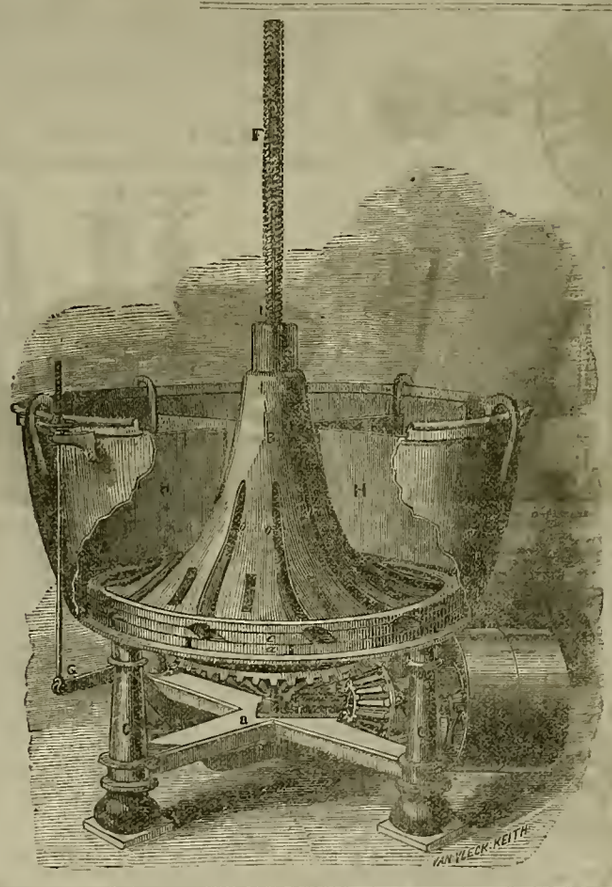
OREGON IRON WORKS.....Portland, Oregon.

WHEELER & RANDALL, Inventors.

SAN FRANCISCO, JUNE 13, 1865.



THE EXCELSIOR

GRINDER AND AMALGAMATOR.

In the engraving herewith presented, A represents the Rim of the Pan; B, Muller; C, Legs; D, Cross-Frame; E, Gearing; F, Screw; G, Lever; H, Dash-Boards; I, Key; *a*, Dies; *c*, Shoes, and *o*, Openings.

The relative grinding capacities of "The Excelsior" Grinder and Amalgamator, of the Flat Bottomed Pan, and of the Conical Pan *when properly constructed*, are respectively 177, 98 and 110.

That is, the respective mullers being of the same diameter, same weight, same hardness, and running at the same velocity, "The Excelsior Grinder and Amalgamator" will reduce one hundred and seventy-seven tons of ore, the Flat Bottomed Pan ninety-eight tons, and the Conical Pan one hundred and ten tons to the same degree of fineness in the same time.

The wear to the Shoes and Dies at their grinding surfaces in the Excelsior Grinder and Amalgamator, is perfectly uniform, thus securing evenness of reduction to the pulp, as well as steadiness of motion to the muller. Uniform wear of the grinding plates has been attained in no other than that of the Tractory form—nor can it be.

Another property of excellence in this machine is that the metal or substance to be amalgamated passes *direct* from the grinding surfaces into the quicksilver; thus excluding the possibility of its becoming coated with any foreign substances, after having been burnished. It is truthfully said "that the Tractory-formed Pan as a Grinder has no equal, and as an Amalgamator no superior."

As a whole, it is far superior to any other pan in use.

MANUFACTURED AT THE

Union Iron Works and Golden State Iron Works.

WHEELER & RANDALL, Inventors.

The undersigned having had several years of experience in practical quartz mining operations, will ever take great pleasure in furnishing parties interested in mining and machinery any desired information which they may possess.

SAVE YOUR BOILERS AND FUEL.

ONE-EIGHTH OF AN INCH OF DEPOSIT ON THE fire surface of a boiler takes THIRTY PER CENT. of the steam generating power from that boiler, and, of course, wastes thirty per cent. of the fuel; and, what is a greater misfortune, it keeps the water from the plates and flues, causing them to scorch, blister and burn, destroying the boiler, and too often human lives.

I Have a Compound For Sale

That I have used with complete success in every instance, and without delaying the running of machinery, or injuring the boilers in any manner, and at a cost of five dollars the boilers can be made as clean as when they were new.

HANSCOM'S CRUSHERS,

Made in sizes suitable for Breaking Quartz for Batteries; Rock for macadamizing or concrete; Copper Ore for sacking, sampling, or concentrating; also, for crushing Quartz for Arastras and Orhiders. The small sizes make a most efficient Crusher for Prospectors, and are arranged to be run by Hand, Horse, Water, or Steam Power. For further information address W. W. HANSCOM,

1 Golden State Iron Works, San Francisco.

THE HAMMER QUARTZ MILL.

[PATENT APPLIED FOR.]

This Machine is now complete and ready for sale. In constructing it, our aim has been to produce a light, cheap and economical Crusher—one adapted to mining on a small as well as on a large scale.

The elementary principle on which it operates is that of the stamp—the only one really reliable and economical.

But the stamp has many serious disadvantages, among which are its great weight and small velocity; the great power required to run it; difficulty in feeding properly; imperfect discharge, and the necessity of crushing wet, or the annoyance from dust in crushing dry.

All these difficulties are obviated in our machine, and the percussive blow of the stamp retained, with the further advantage of its being a drawing or grinding one.

We give to our hammers such absolute or relative weight and velocity as we choose—just such as to effect their purpose and no more—thus securing the qualities of the natural hammer blow.

The feed is self-adjusting and uniform, and as fast as the ore reaches the required degree of fineness (which depends upon the fineness of the screen or sieve used), it is instantly discharged, so that there is no packing of the ore under the hammers.

The mill crushes dry, with no more dust than that incident to feeding, which is trifling.

As the only support of the mortar is a single post set into the ground, the machine can be put in place at slight expense.

The size now being built weighs about 1,800 pounds complete; the heaviest piece not weighing over 275 pounds. It is driven by half a horse-power, and crushes from three to ten tons per day of twenty-four hours per day, according to the character of the rock and the fineness to which it is reduced.

PRICE,.....$800.

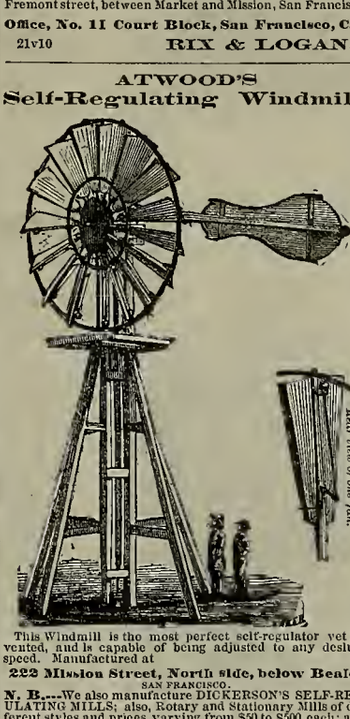
Larger ones will be furnished if desired.

We invite an inspection of the Mill now in operation adjoining the Foundry of DEVOE, DINSMORE & CO., on Fremont street, between Market and Mission, San Francisco.

Office, No. 11 Court Block, San Francisco, Cal.

21v10 **RIX & LOGAN.**

ATWOOD'S
Self-Regulating Windmill.



Rear view of one fan.

This Windmill is the most perfect self-regulator yet invented, and is capable of being adjusted to any desired speed. Manufactured at

222 Mission Street, North side, below Beale,

SAN FRANCISCO.

N. B.—We also manufacture DICKERSON'S SELF-REGULATING MILLS; also, Rotary and Stationary Mills of different styles and prices, varying from $50 to $500 each; also round and square Water Tanks made to order.

222 Mission street, below Beale. 5

HUNT'S
IMPROVED WIND-MILL.

THIS WIND-MILL IS RAPIDLY taking the place of all other Mills on the Pacific Coast. These Mills are so simple in their construction, that when once built, they can be put in order by almost any person; and when once in order they will run for years without repairs.

Prices, from $50 to $1,000.

ROUND AND SQUARE WATER TANKS BUILT TO ORDER.

HUNT'S PUMPS

Are admitted to be the best in the Market for Wind Mills, being built expressly for that purpose. They can be set, and taken apart with a common wrench, and are very easily repaired.

HUNT'S ENDLESS CHAIN

HORSE POWER

For Sawing Wood.

ALSO, THE

Self-Regulating Horse Power

Is so arranged as to give a steady motion, and is calculated to be used for turning Wood, Iron or Brass, also for Scroll or Circular Sawing, and is fully equal to Steam for any light work. The above Machines are built of the best materials, and made as Durable as Wood and Iron will make them.

ALL WORK WARRANTED.

☞ For further Particulars see small circulars. ☜

E. O. HUNT,

No. 28 Second Street, and 108 & 112 Jessie Street, San Francisco. 26-3m

HUNT'S PATENT
Circular Sweep Horse-Powers,

For running Churns, Washing Machines, Grindstones, pumping water, sawing wood, and other light machinery. Price, $100, at the Factory.

HUNT'S PATENT SELF-REGULATING TREAD HORSE-POWER is superior to any machine of the kind in the market. Price, with Governor, all complete to set to work, at the Factory, $300. Manufactured by

E. O. HUNT,

7v10 28 Second street, San Francisco.

SALMON'S
PROPELLER AMALGAMATOR.

The proprietors and inventors of this machine, after fourteen years of practical experience in mining in California and Nevada Territory, and having a thorough knowledge of the wants of Miners and Mill men, have succeeded in making an Amalgamator, which, for the purposes intended, far surpasses any other yet presented to the public, and which can be furnished at less than one-half of the expense of any other Amalgamator, now in use, besides requiring less labor to clean and keep it in running order. The Amalgamator is simple in its construction, consisting of a pan or tub constructed of wood and adapted to either a Stone or Iron bottom. Opposite each other, and on the inside of the tub, are two flanges, from two to four inches broad, reaching from the top to near the bottom, with room for the mullers to pass under. These flanges are for the purpose of preventing the pulp from forming a circular current, and together with a number of wings placed like a screw-propeller on the muller-shaft, force a current continually on the quicksilver at the bottom and under the grinding surface of the mullers. This peculiarity of propeller-screw and side wings, in combination with a deep tub, are what the proprietors claim as new and for which a patent has been applied for. The undersigned are now manufacturing three different sizes of this machine, and the attention of the public is respectfully called to the following results obtained, from the working of Reese River rock, by this amalgamator, and assayed by Miller & Lunbaum, at Austin, Nevada:

	No.	Fine		No.	Fine
Assay	250	913	Assay	300	930
Assay	285	941	Assay for Czotman		980
Assay	286	940	Assay Water Rock		966
Assay	291	950	Assay Water Rock		998
Assay			St. Helena Ledge, W. D.		966

These, including a hundred other batches, were all worked to within fifteen per cent., and some to within ten per cent., of the assay. Parties interested will find it to their advantage to call and see the above machine in operation.

Manufactured at the San Francisco Foundry, San Francisco, California, by

J. & W. C. SALMON,

To whom all orders should be addressed. 15

TO QUARTZ MINERS.

Hinkle's Centrifugal Pulverizer and Amalgamator!

THE ATTENTION OF MINERS IS RESPECTFULLY requested to HINKLE'S CENTRIFUCAL PULVERIZER AND AMALGAMATOR, now manufactured and to be seen in operation at the NOVELTY IRON WORKS of Mr. E. T. Steen, Nos. 37 & 39 Fremont street, between Market and Mission streets.

This machine is the best in the State for the purpose of Pulverizing and Amalgamating ORES. The whole machine, made entirely of iron, will not exceed One Ton, and no piece of it will exceed 200 pounds, which makes it very convenient for transportation to remote districts. It will work Two Tons of Rock per day.

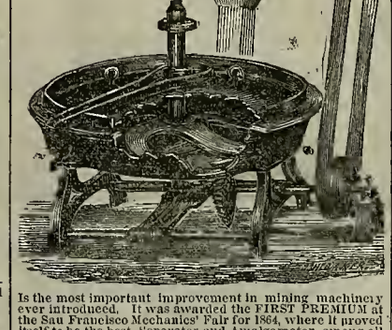
Mr. Hanson, who is running one of the machines, is an experienced Amalgamator, and will receive Ores at the above named place, and extract the metals and furnish assays for all persons wishing the same. The Subscriber manufactures a HAND MACHINE for Miners engaged in prospecting, which will work 60 pounds of ROCK at a time, and which will weigh about 175 pounds.

The Pulverizer and Amalgamator works Rock of the size of a grain of corn to an impalpable powder. Apply to

PHILIP HINKLE,

At the Novelty Iron Works, Nos. 37 & 39 Fremont street.
15-1m

BAUX & GUIOD'S
Separator & Amalgamator



Is the most important improvement in mining machinery ever introduced. It was awarded the FIRST PREMIUM at the San Francisco Mechanics' Fair for 1864, where it proved itself to be the best Separator and Amalgamator among all the competitors. Constructed on principles which combine SCIENTIFIC KNOWLEDGE WITH PRACTICAL EXPERIENCE, these Pans extract more gold and silver from their ores than any others in use, as a few hours trial will demonstrate. Mill men will find it to their advantage to employ these pans as Separators, in addition to the ordinary Amalgators now in use, and to re-work their old tailings.

The cost of these pans is inconsiderable, and their structure is such that they can be readily separated in parts convenient for packing on mules. Among the many advantages possessed by BAUX & GUIOD'S Pan, are the following: The trifling cost for attendance; its small cost; its portability; The large quantity of pulp it can operate upon in a given time: it may be worked even weeks without stopping, as it is constructed to work continuously; The complete thoroughness of the separation of the rock from the metals and the trifling power required to work them; They can be attached to any ordinary crushing apparatus.

Lavadaries' refuse, Refiners' ashes, Jewelers' sweepings, purchased or worked for a percentage. Ores and tailings worked or assayed at reasonable rates.

Manufactured at the Vulcan Iron Works, Miners' Foundry and San Francisco Foundry, San Francisco, and at Hough & Thom's Foundry, Nevada City.

For further particulars, or to see this Pan in operation, call on or address

J. B. BAUX,

Fremont Street, near Mission, adjoining the San Francisco Iron Works, San Francisco. 4v8

FARRAND'S
Oscillating Amalgamator,

RECEIVED THE

ONLY PREMIUM

AWARDED FOR AMALGAMATORS

At the Recent Industrial Fair

OF THE

Mechanics' Institute of San Francisco.

Committee of Awards,

O. BELDEN,	W. T. GARRATT,	H. P. WAKELEE,
O. GORI,	GEO. JOHNSON,	C. M. RADCLIFF.

This Premium Amalgamator was placed on trial, at the Mechanics' Pavilion, with the Varney, Wheeler & Randall and Hepburn & Peterson Pan, each working eight hundred pounds of crushed rock.

This Unrivaled Amalgamator possesses many advantages over all others now in use.

1st. It is capable of doing double the amount of work of the ordinary Pans, at a saving of more than one-half of the power.

2d. It reduces the pulp finer, thereby producing a better result.

3d. It requires less quicksilver by one-half at a charge, whilst the loss by trituration is comparatively nothing.

4th. As an Amalgamator of gold contained in sulphurets as also for very fine or flour gold, it has no equal.

5th. This Amalgamator involves no complicated machinery, and is less liable to get out of order than any of the pans.

Manufactured at the MINERS' FOUNDRY.

W. D. FARRAND, Inventor,

R. L. OGDEN, Agent, SAN FRANCISCO,

S. E. corner Montgomery and California streets.
19v9

NOTICE TO MINERS.

NEW QUARTZ MILL.

THE ATTENTION OF ALL ENGAGED IN MINING IS called to Fauchery's unrivaled Mining Machines, consisting of his celebrated Turbine Water Wheel, which took the First Premium at the Mechanics' Fair at San Francisco for 1864; his Crocodile Quartz Crusher; his Pulverizer; and his Improved Freiberg Amalgamating Barrel; altogether forming the most complete and effective Quartz Reducing and Amalgamating Mill now in use. This mill can be put up at less cost, run with less power, and accomplish more work, than any other now in use.

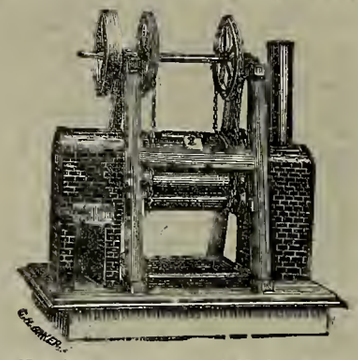
B. Fauchery and F. Genard

Having established a Quartz Mill and Metallurgical Works, are now prepared to crush, roast, amalgamate, assort, enpelate, and give correct analysis of ores. We are also prepared to give our attention to the building and constructing of Quartz Mills and Furnaces, and give directions for working Mines; and also to instruct persons in all branches appertaining to Mining Works, at No. 23 Fremont street, near Market, Railroad Foundry building.

F. GENARD, **B. FAUCHERY,**
Metallurgist. **Engineer,**

24v9

WM. BRUCKNER'S
Furnace for Roasting Ores.



Now in Operation at 416 Market street.

This Furnace, which is portable, and can be carried on mulebback, undertakes to roast without employing any labor whatever for the operation of stirring, which is accomplished by machinery that may be driven by steam or any other motor. It consists of an iron cylinder, which, being suspended by chains, in rotating mixes and stirs the ore, by an internal apparatus, quicker and more perfectly than can be done in any other furnace hitherto known in metallurgy. It can be applied to any kind of ore, and the rapidity and perfectedness of its operation, the great saving in fuel, and the entire saving of the labor usually required for stirring the ore, together with the small cost of constructing it, renders this furnace a most

Economical and Practical Invention.

The Furnace may be had of two sizes—one being nine feet in length and holding fourteen hundred pounds, and the other six feet in length, and holding eight hundred pounds. One horse power is required to drive the machinery of the larger sized furnace, and three-fourths of a horse-power for the smaller size. Parties wishing to erect such furnaces will please communicate to

W. BRUCKNER,

5v10 No. 416 Market street, San Francisco.

BLAKE'S
QUARTZ BREAKER

Is now extensively used for breaking hard masses of

Quartz or Ores

To a size suitable for stamps. These machines are patented, and are in practical operation in

CALIFORNIA, AUSTRALIA,
WASHOE,
ENGLAND, FRANCE,

— AND —

THE ATLANTIC STATES.

These Machines, or circulars containing further information regarding them, may be obtained of the undersigned. Address,

BLAKE & TYLER,

Box 2077 San Francisco Post Office.

CHAS. T. BLAKE, Idaho City. E. TYLER, Michigan Bluff. WM. P. BLAKE, San Francisco.
4v10

VARNEY'S
PATENT AMALGAMATOR.

These Machines Stand Unrivaled.

For rapidly pulverizing and amalgamating ores, they have no equal. No effort has been, or will be, spared to have them constructed in the most perfect manner, and of the great number now in operation, not one has ever required repairs. The constant and increasing demand for them is sufficient evidence of their merits.

They are constructed so as to apply steam directly into the pulp, or with steam bottoms, as desired.

This Amalgamator Operates as Follows:

The pan being filled, the motion of the muller forces the pulp to the center, where it is drawn down through the aperture and between the grinding surfaces. Thence it is thrown to the periphery into the quicksilver. The curved plates again draw it to the center, where it passes down, and to the circumference as before. Thus it is constantly passing in a regular flow between the grinding surfaces and into the quicksilver, until the ore is reduced to an impalpable powder, and the metal amalgamated.

Sellers made on the same principle excel all others.—They bring the pulp so constantly and perfectly in contact with quicksilver, that the particles are rapidly and completely absorbed.

Mill men are invited to examine these pans and sotlers for themselves, at the **PACIFIC FOUNDRY,**

1v10 San Francisco.

Hepburn & Peterson's
AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

☞ This Amalgamator may be seen in operation at the European Metallurgical Works, Bryant St. bet. 3d and 4th.

Illustrated in the Mining and Scientific Press, April 9th, 1864.

HEPBURN & PETERSON.

nov8 3m*

CALIFORNIA SILVER MINES.—The Markleeville *Chronicle*, refers favorably to a new mining district in Alpine county, a short distance south of that city, known as the Raymond district. Among the more promising claims therein, the *Chronicle* names the General Grant, Sacramento, Great Eastern, Great Western, La Chili, Genessee, Wyoning and Silver Cloud—and speaks of the probability of capitalists from Nevada and tho East aiding in the development of the mineral riches of Alpine.

FLOUR DOWN AND UP.—The Stockton *Independent* anticipates a great fall in the price of flour, and says that if the speculators can run flour and wheat down to a very low figure they will be able to buy in all the crop, and next winter run up prices again to starvation rates. We think this is their plan, and we warn the farmers to be in no haste in selling from the new crop.

NEW DISCOVERY

FOR DESULPHURIZING AND DECOMPOSING

METALLIFEROUS ORES,

—SUCH AS—

Auriferous Sulphurets, Arsenites or Antimonial Telluric, Gold and Silver Ores.

By this new process, in a short space of time these ores are decomposed or disintegrated so that they may be easily ground in a common coffee or other hand-mill. A patent has been applied for. The right of using is now for sale by EDWARD ARNOLD, Monitor, Alpine county, Cal., or by

DANIEL ROSS,

Traveling Agent for the sale of the above mentioned discovery throughout the United States. All rights sold by him will be recognized by me.

And in accordance with law, and an order of the Board of Trustees, made on the 9th day of June, 1865, so many shares of each parcel of said stock as may be necessary will be sold, at public auction, at the salesroom of Maurice Dore & Co., at No. 327 Montgomery street, San Francisco, on Saturday, the 29th day of July, 1865, at the hour of 12 o'clock M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

J. M. BUFFINGTON, Secretary.

Office, 10 Government House, corner Sansome and Washington streets, San Francisco. jy15

Chloride Ledge Gold and Silver Mining Company. Location of Mine: Blue Mountain District, Calaveras county, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said company, held on the 11th day of July, 1865, an assessment of one ($1) dollar per share was levied upon the capital stock of said Company, payable immediately, in United States gold coin, to the Secretary, No. 606 Montgomery street, San Francisco, Cal.

Any stock upon which said Assessment shall remain unpaid on Saturday, the 12th day of August, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 26th day of August, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

R. H. SMITH, Secretary.

Office, No. 606 Montgomery street, San Francisco. jy8

Good Hope Gold and Silver Mining Company, Alpine District, Alpine County, Cal.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 10th day of July, 1865, an Assessment of fifty cents per share was levied upon the Capital Stock of said Company, payable on or before the 7th day of August, 1865, in United States gold and silver coin, to the Secretary, at his office, or to H. MORRIS, in Markleeville. [*Delinquents will be held for accruing costs after that date.*]

Any stock upon which said Assessment shall remain unpaid on Saturday, the 12th day of August, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 26th day of August, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

PRESTON MORRIS, Secretary.

Office, 526 Montgomery street, San Francisco. jy15

George Washington Gold and Silver Mining Company, Silver Mountain District, Alpine county, Cal.

ASSESSMENT No. 6.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 10th day of July, 1865, an assessment of one ($1) dollar per share was levied upon the capital stock of said Company, payable immediately, in United States gold and silver coin, to the Secretary, or to S. A. HAWKINS, Superintendent, at Silver Mountain.

Any stock upon which said assessment shall remain unpaid on Saturday, the 12th day of August, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 26th day of August, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

W. D. ROOT, Secretary.

Office, 410 Montgomery street, San Francisco. jy15

Hallock Gold and Silver Mining Company—Location of Works: Great Mogul Mining District, county of Alpine, State of California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 5th day of July, 1865, an assessment of fifty (50) cents per share was levied upon the capital stock of said Company, payable immediately, in United States gold coin, to the Secretary, at the office of the Company, No. 311 Commercial street, San Francisco, or to M. Scott, Mogul, Alpine county, Cal.

Any stock upon which said assessment shall remain unpaid on the 12th day of August, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on the 26th day of August, 1865, to pay the delinquent assessment, together with the costs of advertising and expenses of the sale.

H. B. FORESTER, Secretary.

Office, 311 Commercial street, San Francisco. jy15

La Victoire Copper Mining Company, of Hunter's Valley, Mariposa county, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 10th day of July, 1865, an assessment of three ($3) dollars per share was levied upon the capital stock of said Company, payable immediately, in United States gold and silver coin, to the Secretary, at the office of the Company, 606 Merchant street, San Francisco.

Any stock upon which said assessment shall remain unpaid on Saturday, the 12th day of August, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Monday, the 28th day of August, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

G. FRANCIS PETRARCHI, Secretary.

Office of La Victoire C. M. Co., 606 Merchant street, San Francisco. jy15

Marathon Gold and Silver Mining Company, Keyes District, Mono county, California.

NOTICE.—There are delinquent upon the following described stock, on account of assessment levied on the 12th day of June, 1865, the several amounts set opposite the names of the respective shareholders, as follows:

EUROPEAN
METALLURGICAL WORKS,
—AND—
Practical Mining School,

Bryant Street, Between Third and Fourth,

SAN FRANCISCO.

THE Proprietors are at all times prepared to work or test Ores sent to this establishment—either in large or small quantities—by such process as may be found best adapted to their chemical character, after a careful analysis has been made. Test lots of Ore adapted to the smelting process attended to. Sulphuret, pyritous, and the (so-called) "rebellious ores," are having especial attention paid to their successful treatment. Assaying in the humid and dry way. Also, refining by cupellation, done at moderate rates.

PRACTICAL MINING SCHOOL.

The proprietors—encouraged by numerous applications from gentlemen desirous of pursuing the study of practical metallurgy—have concluded to admit parties on reasonable terms. Having in their Mill all the necessary appliances for crushing, roasting, amalgamating, smelting, refining and assaying, as also a well extended Laboratory for the analysis of Ores and Minerals, a good opportunity is here offered to acquire a sound practical knowledge of the business.

S. P. KIMBALL, J. R. MURPHY.
10v10

To Prospectors.

THE Directors of the San Francisco PACIFIC METALLURGICAL WORKS offer the following inducements to Prospectors:

NOTICE.—Knowing it will benefit our country to have it well prospected, we agree, if any party will forward us samples of minerals of any kind for assay, express paid, inclose TWO DOLLARS for the same, to return them a correct assay, with the best method of working, and feasibility of having the same worked in this city.

Emilia Mining Company, State of Guerrero, Mexico.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 26th day of June, 1865, an assessment of fifty cents per share was levied upon the assessable stock of said Company, payable on the 27th day of June, 1865, in United States gold coin, to the Secretary at the office of the Company, No. 55 Montgomery Block city and county of San Francisco, State of California.

Any stock upon which said assessment shall remain unpaid on Saturday, the 29th day of July, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 12th of August 1865, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

T. B. CUNNINGHAM, Secretary.
Office, No. 55 Montgomery Block, southeast corner of Montgomery and Washington streets.
San Francisco, June 26, 1865. jy1

El Alamo de San Antonio Mining Company, San Antonio Mining District, Lower California.

NOTICE.—There are delinquent upon the following described stock, on account of assessment levied on the 6th day of December, 1864, (re-advertised May 27th, 1865,) the several amounts set opposite the names of the respective shareholders, as follows:

Names.	No. Certificate.	No. Shares.	Amount.
Susan Sweetser	5	10	$10 00
W R Hughes	20	10	10 00
W R Hughes	33	15	15 00
James E Freeman	48	20	20 00
S D Stone	63	15	15 00
G H Chase	58	25	25 00
E Schlatt	66	10	10 00
Albert A Muller	67	5	5 00

And in accordance with law, and an order of the Board of Trustees, made on the 23d day of May, 1865, so many shares of each parcel of said stock as may be necessary, will be sold, at public auction, by John Middleton & Son, No. 404 Montgomery street, San Francisco, Cal., on Saturday, the 15th day of July, 1865, at the hour of 12 o'clock M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

THOMAS RUTHERFORD, Secretary.
Office, 514 Bush street, San Francisco. jy1

El Dorado Gold and Silver Mining Company, Silver Mountain District, Alpine county, California.

ASSESSMENT No. 5.—Notice is hereby given, that at a meeting of the Board of Trustees of said company, held on the 5th day of June, 1865, an assessment of one dollar per share was levied upon the capital stock of said company, payable immediately, in United States gold and silver coin, to the Secretary, at the office of the company.

Any stock upon which said assessment shall remain unpaid on Saturday, the 15th day of July, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Monday, the 31st day of July, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

J. WARREN CLARK, Secretary.
W. D. ROOT, Deputy Secretary.

Office, No. 410 Montgomery street, San Francisco.

NOTICE.—At the above meeting, assessment No. 1, levied July 8th, 1863, assessment No. 2, levied August 4th, 1863, and assessment No. 3, levied October 15th, 1863, of ten cents per share each; also, assessment No. 4, levied September 24th, 1864, of fifty cents per share, were rescinded, and stockholders having paid said assessments will be credited on the above assessment, No. 5, accordingly. Also, notice is given, that the additional amount of twenty cents per share (being properly assessment No. 5), was levied for the month of June, 1865.

J. WARREN CLARK, Secretary.
jel0 W. D. ROOT, Deputy Secretary

POSTPONEMENT.—The advertisement of stock delinquent on the above assessment is hereby postponed until Saturday, July 22d, 1865, and the sale thereof until Monday, August 7th, 1865. By order of the Board of Trustees.

jy15 J. WARREN CLARK, Secretary.

Hancom Copper Mining Company, Low Divide District, Del Norte county, Cal.

Notice is hereby given, that at a meeting of the Board of Trustees of said company, held on the 19th day of June, 1865, an assessment of fifteen (15) cents per share was levied upon the capital stock of said company, payable immediately, in United States gold and silver coin, to the Secretary.

Any stock upon which said Assessment shall remain unpaid on Saturday, the 22d day of July, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 5th day of August, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

C. H. BURTON, Secretary.

Office, Room No. 4, northwest corner Clay and Front streets, San Francisco, Cal. je24

"Say, why should man for thirst be given
If not for wine bestowed by Heaven
To quench such drought as mine?
Without it, I'm a fish on land,
A barren heap of parching sand—
Then give me joyous wine."—*Trinklied.*

Delicacy of flavor, exhilaration without intoxication, and every other desirable property belonging to the rightly fermented Juice of the Grape, are to be found in the "Gerke Wine," from the celebrated Bosquejo Vineyard, Tehama county.

There is no wine produced in California that can bear comparison with this, and it would be difficult to find a European wine, of the same class, that can surpass it.

The vintage of 1862 is now offered for sale, in quantities to suit, by the Agent of the vineyard,

A. S. LOWNDES,

Basement of the New York Hotel, southwest corner Battery and Commercial streets, San Francisco. 20v10-qy

Delays are Dangerous.—Inventors on the Pacific Coast should bear in mind that by patronizing our Patent Agency they can sign all necessary papers for securing patents almost immediately, thereby avoiding the three month's delay requisite in transacting business through Eastern agencies.

Whitlach Yankee Blade Silver Mining Company, Lander county, Nevada.

And in accordance with law, and an order of the Board of Trustees, made on the 1st day of June, 1865, so many shares of each parcel of said stock as may be necessary will be sold, at the office of said companies, No. 305 Montgomery street, San Francisco, on the 20th day of July, 1865, at the hour of 2 o'clock P. M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

J. S. LUTY, Secretary.

Office, 305 Montgomery street, San Francisco. jy1

Economy in Advertising.—The MINING AND SCIENTIFIC PRESS is the best and most ECONOMICAL mining advertising medium in this city. Our terms are less than ONE HALF the rates now charged by daily newspapers, and the mining community are beginning to appreciate our reasonable rates of advertising. The PRESS contains, proportionally, a larger amount of mining advertising than any other paper on the Pacific coast. Its character renders it the proper journal for the concentration of mining patronage.

Agent Wanted.

A good Canvassing Agent can secure permanent and remunerative employment by calling at the office of the MINING AND SCIENTIFIC PRESS, 505 Clay street.

Printer Boy Wanted.

An active and reliable boy, about sixteen years of age, who wishes to learn the printing business thoroughly, in all its branches, can obtain a situation at this office upon presenting suitable recommendations.

U. S. 7-30 LOAN.

By authority of the Secretary of the Treasury, the undersigned has assumed the General Subscription Agency for the sale of United States Treasury Notes, bearing seven and three-tenths per cent. interest per annum, known as the

SEVEN-THIRTY LOAN.

These Notes are issued under date June 15th, 1865, and are payable three years from that time in currency, or are convertible, at the option of the holder, into

U. S. 5-20 Six Per Cent.

GOLD BEARING BONDS.

These Bonds are now worth a premium of nine per cent. including gold interest from November, which makes the actual profit on the 7-30 loan, at current rates, including interest, about ten per cent. per annum, besides its EXEMPTION FROM STATE AND MUNICIPAL TAXATION, WHICH ADDS FROM ONE TO THREE PER CENT. MORE, according to the rate levied on other property. The interest is payable in currency, semi-annually, by coupons attached to each note, which may be cut off and sold to any bank or banker.

The interest amounts to

One cent per day on a $50 note,
Two cents per day on a $100 note,
Ten cents per day on a $500 note,
Twenty cents per day on a $1,000 note,
One dollar per day on a $5,000 note.

Notes of all the denominations named will be promptly furnished upon receipt of subscription. This is

The only Loan in Market

now offered by the Government, and it is confidently expected that its superior advantages will make it

THE GREAT POPULAR LOAN OF THE PEOPLE.

Less than $300,000,000 of the loan authorized by the last Congress is now on the market.

This amount, at the rate at which it is being absorbed, will all be subscribed for within four months, when the notes will undoubtedly command a premium, as has uniformly been the case on closing the subscriptions to other Loans.

In order that citizens of every town and section of the country may be afforded facilities for taking the Loan, the National Bank, State Banks, and Private Bankers throughout the country have generally agreed to receive subscriptions at par. Subscribers will select their own agents, in whom they have confidence, and who only are to be responsible for the delivery of the notes for which they receive orders.

JAY COOKE.
Subscription Agent, Philadelphia.

March 25, 1865. 17v19.3m

ADDENDUM.

PER OVERLAND TELEGRAPH:

PHILADELPHIA, May 17, 1865

Second Series all sold. Commenced on Third Series. Two Hundred and Thirty Millions (230,000,000) precisely like other two Series, except dated 15th July, and Government reserves the right to pay six per cent. in Gold instead of 7-30 Currency.

JAY COOKE,
Subscription Agent, Philadelphia.

MEXICAN

TEN PER CENT.

SIX YEAR LOAN.

The undersigned, having a full Power of Attorney from Gen. GASPAR SANCHEZ OCHOA, Commissioner for the REPUBLIC OF MEXICO, as Agent for the sale of the Bonds of this

POPULAR LOAN,

These Bonds will be sold at

Fifty Cents on the Dollar, Gold Coin.

They bear date July 1st, 1865, and are now ready to be furnished in sums to suit, in denominations from $50 to $1,000.

The principal and interest are payable in United States gold coin.

Interest payable semi-annually at the PACIFIC BANK, in the city of San Francisco.

The payment and redemption of these Bonds and Coupons are secured by the transfer to the undersigned, as Trustee, of one-half of the fiscal proceeds of all the

Revenues and Duties

Derived from the Custom Houses of

MAZATLAN,
GUAYMAS,
MANZANILLO,

And all the Ports in the States of

Sinaloa, Sonora and Colima,

AND FROM THE MINES OF SAID STATES,

Which Revenues and Duties, so soon as collected, are to be deposited and held by the undersigned in the

Pacific Bank, San Francisco,

And employed exclusively for the payment of said

BONDS AND INTEREST.

General OCHOA has made an assignment to the undersigned of one-half of all the duties received at the above Custom Houses, for the payment of said Loan and Interest, and also to appoint Agents to receive the above Revenues.

☞ SUBSCRIPTION BOOKS are now open at our Office, Room No. 3, third floor, Masonic Building, No. 420 MONTGOMERY STREET, San Francisco.

SAMUEL BRANNAN,
AGENT.

HELMBOLD'S

FLUID EXTRACT BUCHU

For Non-Retention or Incontinence of Urine, Inflammation or Ulceration of the Bladder or Kidneys, Diseases of the Prostrate Gland, Gravel, Brick Dust Deposits, Dropsical Swellings, Organic Weakness, Debility, Female Complaints, Etc.

H

HELMBOLD'S

FLUID EXTRACT BUCHU

—AND—

Improved Rose Wash

Will radically exterminate from the system Diseases arising from Habits of Dissipation, *at little expense, little or no change of diet, no inconvenience or exposure;* completely superseding those *unpleasant and dangerous remedies, Copaiba and Mercury,* in curing these diseases.

U

USE HEMBOLD'S

FLUID EXTRACT BUCHU

In all Diseases of the Urinary Organs, whether existing in MALE OR FEMALE, *from whatever cause originating, and no matter of how long standing.* It is pleasant in its taste and odor, IMMEDIATE in action, and more strengthening than any of the preparations of *Bark or Iron.*

Those suffering from *Broken Down or Delicate Constitutions, procure the Remedy at once.*

The reader must be aware that however slight may be the attack of the above diseases, it is certain to affect his *Bodily Health, Mental Powers and Happiness.* If no treatment is submitted to, Consumption or Insanity may ensue.

All the above diseases require the aid of a diuretic.

Hembold's Extract Buchu
IS THE GREAT DIURETIC.

L

HELMBOLD'S

HIGHLY CONCENTRATED

Compound Fluid Extract Sarsaparilla,

For purifying the Blood, removing all diseases arising from excess and imprudence in life, chronic constitutional diseases arising from an impure state of the blood, and the only reliable and effectual known remedy for the cure of Scrofula, Scald Head, Salt Rheum, Pains and Swelling of the Bones, Ulcerations of the Throat and Legs, Blotches, Pimples on the Face, Tetter, Erysipelas, and all scaly eruptions of the skin, and beautifying the COMPLEXION.

M

NOT A FEW

Of the worst disorders that afflict mankind arise from the corruption that accumulates in the Blood. Of all the discoveries that have been made to purge it out, none can equal in effect HELMBOLD'S CONCENTRATED EXTRACT OF SARSAPARILLA. It cleanses and renovates the Blood, instills the vigor of health into the system, and purges out the humors which make disease. It stimulates the healthy functions of the body, and expels the disorders that grow and rankle in the Blood. Such a remedy, that could be relied on, has long been sought for, and now, for the first time, the public have one on which they can depend. Our space here does not admit of certificates to show its effects, but the trial of a single bottle will show to the sick that it has virtues surpassing anything they have ever taken.

B

Two tablespoonsful of the Extract of Sarsaparilla, added to a pint of water, is equal to the Lisbon Diet Drink, and one bottle is equal to a gallon of the Syrup of Sarsaparilla, or the decoction as usually made.

The above Extracts are prepared on purely scientific principles—in *Vacuo*—and embody the full strength of the ingredients entering into their composition. A ready and conclusive test will be a comparison of their properties with those set forth in the U. S. Dispensatory.

O

HOW TO USE THE REMEDIES.

In Diseases of the Blood, Humors on the Face, or any and every part of the body, use Extract of Sarsaparilla, applying to Pimples and all external Humors or Eruptions the Improved Rose Wash.

Use the Extract Buchu for all diseases requiring the aid of a diuretic, except those of the Urinary Organs, such as Gonorrhœa and Gleet; in these use the Extract Buchu, and inject with the Improved Rose Wash.

L

☞ THESE EXTRACTS HAVE BEEN ADMITTED TO USE IN THE UNITED STATES ARMY, and also are in very general use in all the STATE HOSPITALS AND PUBLIC INSTITUTIONS throughout the land, as well as in private practice, and are considered as invaluable remedies.

QUARTZ OPERATOR'S HAND BOOK.

A Book for Every Intelligent Prospector, Shareholder, Miner and Machinist.

ZENAS WHEELER AND P. M. RANDALL,
Authors and Publishers.

BOUND IN CLOTH—144 PAGES, DUODECIMO.

THE QUARTZ OPERATOR'S HAND BOOK is presented to the public as a carefully prepared epitome of all that is valuable for the practical operator in the mine and mill. We have here all the most necessary hints and directions for testing and assaying the ores of the various minerals; an explanation of chemical terms; a brief and intelligible description of the numerous processes for roasting ores, and the extraction of metals from their ores by amalgamation and otherwise.

The work also contains an original and highly interesting discussion of the tractory and differeatly formed grinding plates, as applied to the reduction of ores—a subject not only of special interest to the scientific reader, but also practically of the highest importance to every quartz miner.

Professor Silliman, of Yale, and Hodgson, of the College of California, having examined this discussion, as submitted to them by its author, Mr. Randall, previous to the compilation of this work, speak of the same as not only mathematically correct, but also as of great practical value. Messrs W. R. Eckart, Jr., Engineer, (late of U. S. N.,) and W. M. Belshaw, assayer and superintendent of the S. T. M. Co., to whom the entire work was submitted while passing through the press, speak of the same as one of high practical importance to quartz miners and millmen generally.

No work has been offered to the mining public of California which contains so much valuable information, condensed into so convenient a space as is here presented. In its preparation, much care has been taken to secure brevity, concisenese, and simplicity—in fact to make it a complete and reliable QUARTZ MINER'S HAND BOOK.

The Table of Contents of this book will be found on page 415 of the MINING AND SCIENTIFIC PRESS of July 1st, 1865.

Sold by booksellers generally. Price by mail, postage paid, $1.25. Address "Wheeler & Randall, at the Mining and Scientific Press Office, San Francisco." 2v11

EUREKA

PATENT BLASTING POWDER.

Price $3.50 Per Keg.

Office, southeast corner Battery and Commercial streets.

Room No. 9, with San Francisco Chemical Works,

CHAS. A. JAMES.....AGENT

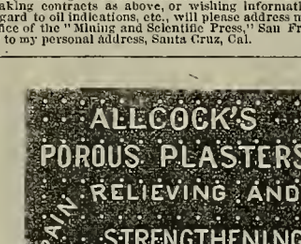
For underground blasting in Tunnels, Mines, etc., this Powder possesses very great advantage—on account of it giving out scarcely any smoke after the blast. By using the same quantity in bulk as the gun blasting powder, you produce a much greater effect. 2v11qy

OIL WELL BORING.

J. SEVENOAKS,
Contractor

For Well Boring and Erecting all kinds of Machinery connected therewith.

Having had extensive experience in boring for oil in Pennsylvania, Canada and elsewhere, I feel confident of being able to give entire satisfaction. Persons desirous of making contracts as above, or wishing information with regard to oil indications, etc., will please address me at the office of the "Mining and Scientific Press," San Francisco, or to my personal address, Santa Cruz, Cal. 2v11



In Local Affections no words can give a just idea of the comfort one of these plasters impart. They are the plaster of the day, and a fit type of our present advancement in science and art. In Asthma, Cough, Kidney Affections, and local deep-seated pains, they afford permanent relief. TRY ONE, and be convinced.

Brandreth's Vegetable Pills.—This medicine, of enduring efficacy, is justly prized as a corrector of all disorders of the stomach and bowels, the common symptoms of which are costiveness, spasms, loss of appetite, sick headache, giddiness, sense of bloating after meals, dizziness of the eyes, drowsiness, and cramping in the stomach and and bowels. These symptoms being suffered to remain, a torpid state of the liver supervenes, and all the horrors of dyspepsia are experienced. Every function of the frame is to a certain extent prostrated; but a little perseverance in the use of BRANDRETH'S PILLS will ever restore the system from this state of misery. Two or three doses will convince the afflicted of their salutary influence. The stomach will speedily regain its strength, a healthy action of the liver will soon take place, and instead of listlessness, heat pain, and jaundiced appearance, activity, strength and renewed health, will be the blessed result. Brandreth's Pills are sold at 25 cents per box, enveloped in full directions. Purchase none unless my private Government Stamp is on the box. See upon it "B. Brandreth" in white letters.

DEWEY & CO., Proprietors.

Patent Agency and Job Printing Office, 505 Clay street, San Francisco. July 1, 1865.

RETURN OF DR. JACKSON AND PROF. TORREY.—The U. S. steamer Shubrick, with Dr. Jackson, Professor Torrey and Hon. Levi Parsons, has returned to this port. The distinguished scientific gentlemen who accompanied Mr. Parsons express the highest satisfaction at the result of their explorations. The Doctor has written out his report, with regard to the oil, asphaltum, etc., which is accompanied with several spirited illustrations, which we hope to have the pleasure of publishing in fall so soon as the engravings can be prepared.

Prof. Torrey enriched his portfolio with a large number of rare and beautiful botanical specimens, some of which, we believe, are new. The Professor will take a view of the botanical riches of the Sierras and the western portion of the Great Basin before he leaves for the East. It is to be hoped that his time and convenience will allow him to make his homeward trip overland. His observations and discoveries on such a trip would be of inestimable value to the country and the cause of science.

The report of Dr. Jackson, with regard to the oil deposits of Santa Barbara, will be read with much interest not only in California, but at the East and throughout Europe, where his reputation as a scientific man and a close and accurate observer, will carry conviction, and do much to eradicate many false and crude ideas which have recently gained circulation. The report is addressed to the Hon. Levi Parsons, who is doing more than any other man in California to develop the great and growing oil interest on this coast.

THE MIDSUMMER RAIN.

A midsummer rain, on or about the 1st of July, appears to be one of the regular weather features of the Pacific coast. These rains, generally very light, but often heavy, are an almost sure recurrence. This year it commenced on the 3d, on the afternoon of which day a rainbow of remarkable brilliancy was observed throughout this portion of California. During that night, and at intervals for several subsequent nights, we had a slight fall of rain in this city, and generally throughout the interior. At Strawberry Valley, and all along the elevated portion of the western flank of the Sierra, it rained quite heavily. In Virginia City, and along the eastern slope, it poured down in torrents during nearly the entire of the day previous to the Fourth. According to the *Enterprise*, "Streams of water, several inches in depth, rushed down the streets" of that city, while the water poured out of the roof spouts in torrents. At Reese River, according to the Austin *Reveille*, a heavy rain fell, almost without intermission, for six or seven consecutive days. From eight o'clock on the evening of the 6th instant, to five o'clock on the morning of the 7th, not less than two inches of water fell at Austin. The streets were flooded, and the water, in some instances, rushed with violence through stores and into basements. The floor of the billiard room of the National Exchange was covered several inches deep with water. Rain was accompanied on the evening of the 8th with brilliant flashes of lightning and frequent peals of thunder; the whole western horizon being at times "one splendid sheet of lambent flame." The storm which appeared simultaneously at Virginia City, Reese River and Humboldt, on the 3d, traveled slowly eastward and reached Salt Lake on the 5th, where it scattered its blessings promiscuously upon both saint and gentile. There was another shower at Austin on Saturday, the 15th inst. Quite a fall of rain was experienced in Grass Valley and vicinity, on the morning of Tuesday last; the weather in the meanwhile being quite cool.

A NEW GOLD EXCITEMENT IN IDAHO.—The Lewiston (Idaho) *Radiator* of July 1st, gives the particulars of a reported gold discovery, of fabulous richness, on the east side of the Bitter Root mountains, to the northward and eastward of Lewiston. These mines are supposed to be on a small creek thought to be a tributary of the Clearwater. The party who discovered it are said to have obtained from fifty cents to $1.50 per pan at the point where they first struck the creek, the gold increasing in quantity as they followed up the stream, until they could get from $8 to $10 to the pan of coarse gold. They claim to have prospected the country sufficiently to satisfy them that the diggings cover an area of fully six miles in length by half a mile in width. Large numbers were wending their way to the "new diggings," which, whether good or indifferent, will be pretty well occupied ere many days have elapsed. There are too many idle and poorly employed men, in Idaho, at this time, to render it of much use for Californians to rush thither, even though the evidence was unquestionable of the truth of all that is claimed for the new diggings.

THE SANTA BARBARA METEOR.

We have been allowed to make the following extracts from the notes of Dr. C. T. Jackson, with regard to the meteor which passed over this State on the evening of the 12th instant:

"July 12th, Wednesday. Bivouac at Mupu, on the Ojai ranch, Santa Barbara county, Cal. This evening, at 7 o'clock. 29 minutes, a magnificent meteorite fell, passing along in the western sky at an angle of 21° altitude, and towards the northeast. The time of its transit, so long as it was seen, being about eight seconds, while it left a trace of illumination and distinct sparks in its whole path, which train remained visible for the space of ten or twelve minutes. Its apparent magnitude was that of a 6 lb cannon ball.

No stars were visible at the time, so that the angle of elevation had to be observed by such an instrument as was at hand, which was a clinometer, and owing to the long continuance of its train it was easy to obtain the observation above noted. It was also observed that the portion of the train, where the sparks were most abundant, sunk more rapidly than the other portions of the illuminated train, and made quite a distinct bow with its curved arch downward. The whole train was observed to waver, as if from currents of air, and therefore it is presumed the meteorite passed through a portion of the atmosphere which is comparatively dense. Hence it could not have been very far from the earth, and must have fallen at no very great distance.

If persons who saw this meteor, in other parts of the country, noticed its angle of elevation, and will publish their observatinns, perhaps some approximation may be made to an estimate of its hight, the distance of the places of observation being the base of the triangle."

REMARKS.—We notice by paragraphs in the Grass Valley *National*, and the Nevada *Gazette*, that the same meteor was seen from a point about thirty miles east of Virginia City, by passengers on the overland stage. These two points of observation must have been about 350 miles apart, on an almost due north and south line. It would be very interesting to learn from the stage passengers referred to, as near as may be, the following particulars: 1st the point of observation; 2d, the point of compass in which the meteor was seen by them; 3d, the angle of elevation, and 4th, the apparent direction of its motion, and any further particulars which they may be able to communicate, with regard to its appearance, etc. If either of the editors of the papers mentioned would again confer with their informants, and forward such particulars as they may obtain, to our address, they will much oblige us.

A MOUNTAIN OF SALTPETRE.—Dr. Harrison, the original discoverer of the gold, silver, copper and lead mines of the Crystal Peak mining district, located near where the Henness Pass road first strikes the Sierra, in coming this way from Virginia City, has recently added to his other discoveries, a "mountain of saltpetre." This mountain is said to exist about six miles northeast of Crystal Peak, and it is claimed that there is no mistake as to either the genuineness or quantity of the article. If it occurs in such quantities as described, its location must soon render it of great commercial value.

☞ New Mining and Miscellaneous Advertisements on page 45 ☜

AMERICA AND GREAT BRITAIN.

The recent labor movement in England has developed the fact that the masses of Great Britain are and have been heartily disgusted with the course pursued by the rulers and money-eyed interest of that country, in relation to the recent struggle for the sustainment of our institutions, and the suppression of the rebellion. The words of sympathy which are now coming up from the middle and laboring classes of that country, are truly grateful to the hearts of the American people; and not even the hypocritical tears of our late enemies and traducers there, which have been shed so freely since our final triumph, can induce us to abate one jot or tittle of the value which we place upon the generous and honest sympathy of those masses. The American people have never, for a moment, doubted that the intelligent, middle classes of Great Britain, have all along felt an honest sympathy with us in our terrible struggle; nor do we now entertain the least particle of doubt that the recent and new-born manifestation of her ruling classes is simply a force put, which they cannot avoid—their own people *demand* it at their hands. With a few honourable exceptions, we owe *them* no gratitude.

It is this friendly feeling—this *entente cordiale*—with the British producing classes, which is now filling up our depleted workshops at the East with the best skilled labor in the world; and England will yet witness the most convincing proof that its unfriendly haste in according the right of belligerents to American traitors, was one of the most unfortunate steps which that proud government ever initiated. It will be the means of developing on this continent a system of protection which will effectually bar Great Britain from one of her best customers, and deplete her own realm of the very life-blood of her industrial skill. Such, and nothing less, must grow out of the high duties which must hereafter rule on importations to this country, and the consequent demand of our manufacturers for skilled laborers to bring out the productions of our own looms and our own forges. Perhaps this is one of the means which an over-ruling Providence has devised for developing this great country. But, at all events, it may be set down as one of the necessities of the future, that hereafter America and Great Britain must be and continue manufacturing and commercial competitors; and *our* unchanging policy must be to import all the British men we can, and as little of British merchandise, as will possibly answer our necessities.

THE NEVADA HISTORICAL AND SCIENTIFIC SOCIETY, located at Virginia City, has adopted articles of incorporation. The following officers have been elected: A. F. White, President; W. F. B. Lynch, Vice President; C. L. Andersou, Recording Secretary; Thomas Wells, Corresponding Secretary, and W. B. Lawlor, Treasurer.

NAPOLEON never smoked; and Goethe says that a man of true genius cannot cultivate both science and his pipe together. There may be a few illustrious exceptions; but they only prove the correctness of the rule.

Communications.

IN THIS DEPARTMENT we invite the FREE DISCUSSION of all proper subjects—correspondents alone being responsible for the ideas and theories they advance.

[Written for the Mining and Scientific Press.]

The "Alta California" vs. Mining.

BY DON AUGUSTIN.

"We recently noticed a project of an Eastern paper for the National banks to subscribe $50,000,000 paper money, to be sent to Nevada, for the purpose of putting in operation 500 mills, which were to earn $500,000 net silver per day. The results of the calculation may be disturbed in relation to the Nevada mines, if we may judge by example. Thus, the 'Bullion'—auspicious name! glittering cognomen! suggestive of brilliant profits and a bright future—had 2,500 feet, (feet of what?) They said there was a mine, and they raised money, and they digged and drifted. They hollowed the mountain and excavated the stockholders by assessments. In September, in January and in March, they assessed $60 per share, say $150,000. They sunk the money 600 feet, and drifted in all directions, and the more they drifted the less they found. At each assessment a greater number of shares were delinquent, until June 6th they levied $40 on the whole 2,500 shares. This was a shaft sunk into the stockholders for $100,000, but unfortunately like the shaft sunk into the mountain, it realizes nothing. The results are as follows:

Levied on shares.....	2,500 shares ...	$40....	$100,000
Delinquent shares.....	2,390 shares....	40....	95,600
Sound stock.....	110 shares.....		$ 4,400

So says the *Alta* in its financial column of the 17th July. Truly a Daniel come to judgment. After committing that, we confess that almost any quantity of similar bosh may be expected from the same source in the future, provided the immense effort of judging "by example" as above, does not cause such a number of sleepless nights and profound study as to entirely upset the reasoning faculties of the poor mortal who was guilty thereof.

The *Alta* is read in the East, and has often argued that Eastern capital could be profitably invested in mines on this side. It professes to labor for the welfare of the people here, who support it. It publishes mining advertisements, charges a round price—but seems incapable of discriminating between the profits of mining and the stock gambling transactions of Montgomery street. Whenever, by some skillful movement of stock gamblers, mining shares depreciate, the *Alta* heralds that so many millions, during the last few months, were lost at *mining*, and goes into figuring to show it, on the principle, as A. Ward would say, that "Facks and figures won't lie."

Did it ever occur to the *Alta* that if they wanted to show the world the profits made by mining by any particular company, that the correct way so to do, is to take first the amount paid in by the shareholders; then show how much it cost to develop the mine, and how much were the company's expenses aside from mining and milling. This gives a true basis from which to calculate loss or gain.

Eastern capitalists, anxious for profitable investments, on reading such bosh and not being conversant with the facts, would hesitate about investing in even the best of mining undertakings. Stupid ones would refuse entirely. Mr. Emptihed, who sold goods to miners, and in a few years retired on a million, knew when he bought for so much and sold again at a certain advance, that he had made a profit. He never could exactly comprehend the true basis of his transactions. The miner had money, paid his bills, and Mr. E. comprehended no more. He also reads, pulls his purse strings tighter, looks as wise as an owl, and never undertakes any mining adventures. Unfortunately the family of Mr. Emptihed, in its many relations by blood and marriage, is very numerous, and they all see passing events through the same spectacles.

The intelligent miner also reads it. He throws down the paper in disgust; is perplexed, thinks of swindling incorporations and all such stuff. He has seen and examined silver mines in Germany and elsewhere, knows that ores that are profitably worked in Europe are cast away as worthless in Nevada. He knows that there are many rich ledges that would yield millions on the touch of Capital. He knows that Nevada was but a few months ago one vast desert. That now it is a State with incorporated cities. He knows that the people who built those cities were mostly poor men, who brought but little with them, and he also knows that many came poverty-stricken to Nevada, and left with handsome fortunes. He knows that comparatively little foreign capital helped Nevada, and that many mines were developed by poor men, who subsisted by working their select lots of very rich ores by hand mills. He knows that the ordinary ores of silver are only profitable when worked by machinery. He wonders why foreign capital does not come and reap the harvest.

Mr. Stockoperator, however, is not so easily perplexed. He reads and wonders if the writer "did it" for any particular reason or if he has gone crazy. He soliquises as follows:

"Bullion—2,500 shares—sold at $140, assessment $40, delinquent—selling at $180 @190—carries assessment—delinquent sale, August 7th—pleoty of time to pay in, before then—all will be paid in full—all assessments have been—good claim—title may be bad—started mining on poor ground—good ground in dispute—several years at law—wins suit, recovers about 800 feet of best ground in Gold Hill—sues Alpha Co. for more—will probably win—has spent about $19 out of every $20 in legal and other expenses, and about $1 in mining—Imperial Co. own on same ledge as Bullion, just recovered—Imperial pays about $20 per month to the inch of ground—and sells for about $5,000 per foot—Bullion has similar feet—writer must be operating."

The next time the *Alta* goes to "judge by example," it would be advisable to take a company that has spent its money in mining, and not in Washoe litigation. The sum of $100,000 expended on a silver vein is seldom unprofitable; but picked at by hungry lawyers it goes but a little way in a mining suit; and moreover whenever figures are used just place them properly, in conjunction with the actual facts of the case, and they may be counted upon.

It is not intended in any manner to defend the action of the Bullion company in this article. The management seems to have a greater desire for litigation than mining, and all such doings can only prove disastrous to mining in general.

If the National banks invest their $50,000,000 in actual mining and milling as proposed, their investment will prove one of the most profitable ever undertaken on this continent; and it is to be hoped that Eastern capital may never be prevented from such investment by the flagrant stupidity of a few scribblers who cannot comprehend that the community of this coast was built up, flourishes and subsists mainly from the profits of its mines; and that if the mines were to fail to-day, that in less than a twelve month the city of San Francisco would be almost entirely depopulated.

The English Parliamentary Election.

The next general election for members of the British House of Commons is expected to take place in July. That body consists of 645 members, of whom England and Wales send from counties 159, from the Universities 4 and from the towns 333. Scotland sends 30 members from the counties and 23 from the towns. Ireland returns 64 members for counties, 39 for towns, and 2 for the University of Dublin. The canvass has been in active progress since April. Candidates are not nominated as with us, by any political committee, convention or caucus, for parties there have no outward organization, the term "party" being as vague as that of "constitution," and being a thing of ideas, not a palpable machinery. The candidates announce themselves, or are invited by prominent citizens who favor their known views on public questions, who admire their characters, or who wish to testify their regard for some service they may have done the country. Every candidate, as his name is announced, or as he accepts an invitation, "defines his position," as we say in America. Some simply declare themselves in favor of reform, or opposed to radicalism, and the like, which safe generalities may be acceptable enough to either the Liberal or Conservative parties to whom they are addressed, but convey little information to readers at this distance. A few are more explicit, and state in detail what measures they favor or oppose. The canvass is a spirited one, and engages the attention of the whole British press. Perhaps the leading question is that of Parliamentary Reform, which has been in English politics for the last 40 years what Abolition was in American politics during the same period—the one irrepressible topic that will not down. It involves an extension of the elective franchise, and the adoption of a more equable and democratic system of representation. Bright is perhaps the most liberal advocate of the Liberal side on this issue, though an illustrious convert is reported in the person of Disraeli, who is said by the telegraph to be in favor of universal suffrage; but this is no doubt a mistake.

Letter from Esmeralda.

EDITORS OF MINING PRESS:—A few items from our camp may not be uninteresting to the many readers of your truly valuable journal, and therefore by your permission, I will occupy a small place in its columns for that purpose. No building, and but little work, has been done since the first of last January. All of the mills have closed down since that time, with the exception of Bodie, Winters' and Union mills. These have been, and are now, running upon custom rock. During the Winter and Spring a large number of our citizens have left for Reese River, Owens river, Colorado river and Clear creek. The Empire and Golden Age Company have been at work on their mine during the past Winter and Spring. On Monday, July 3d, they commenced, in connection with the Citizens Prospecting Association, to sink their deep shaft, which is now down to the depth of 230 feet, and the joint association propose to continue the work until the shaft shall have reached the depth of at least 600 feet.

The Del Monte has been, for the last three months, and is now, working from four to six hands in their mine. They have a small number of men re-sorting their old dump piles, and refuse, or third-class quartz, from which they have selected about one hundred tons of splendid *ore* that will pay at least $50 per ton. Some of the ore that is now being taken out of the mine will pay $200. I have seen a few pieces that will work one dollar per pound.

The Antelope and Utah companies have been doing less than the Del Monte. A good deal of work is being done by individuals in taking out small lots of ore from their claims. No one has realized by this method of working less than $40 per ton, and in a majority of cases it has reached as high as $100.

BODIE DISTRICT

Has taken the lead of all other camps in this part of the State during the present year. The Empire G. & S. Mining Co. (whose office and principal place of business is in New York city,) commenced work about the first of May in their several shafts and tunnels. They have now employed about 65 or 70 men. The New Mexico shaft has now reached to the depth of 180 feet, and ore is now being mined from the second level, at a distance of 120 feet from the surface, at which point the ledge is found to be from three to five feet wide, and pays, by a working test, $225 per ton; while in custom mills only $40 to $50 is realized per ton. The Osceola shaft is down to the depth of 215 feet; first level or chamber, 100 feet from the surface. The ledge has been opened out and tested for the distance of 300 feet, and is from four to six feet wide, all pay ore, with well defined casings. The ore from this shaft, by test, works $160 per ton. There is now in sight at least 10,000 tons of splendid ore.

Westerly from the last mentioned shaft, is the Isabella. The main shaft of this mine has been sunk to the distance of 154 feet. A large amount of ore has been furnished from this mine, to certain mills, from its first level; 50 feet more will be sunk before running the second level. Easterly from the *Isabella* is situated the *Magnet*, which is the most easterly location of all of the company's claims, and a shaft is now being put down to open out the ledge. The *Orion*, below the Isabella ledge, is being also prospected. The company has some 23 other ledges, several of which are now being developed by shafts being sunk from 50 to 200 feet in depth. They all show more or less pay ore, and can be worked at any time. The first above named mine will more than supply ore sufficient to keep their new mill constantly running. At the base of the northeast slope of Bodie Bluff, the company are now erecting a large, first-class brick mill, being the most solid and compact, as well as complete in all of its complicated details, of any mill in the State of Nevada or California. It will run sixteen large stamps, eight Wheeler pans, three separators, four concentrators, and four shaking tables—one to each battery of four stamps. The foundation of the mill is built of stone, in the most solid and substantial style. The main building is 55 feet front and 80 deep, two stories high, and will be in running order about the first of August. The opening of the mine and the erection of the mill has been during the past Spring under the management of Mr. Sanchez, the company's able and energetic superintendent, to whom is due the credit for the early completion of the latter, and the opening out of the former. To the north of the Empire company is situated the San Antonio claim, upon which has been sunk a shaft to the distance of 120 feet, Mr. F. K. Becktel, the proprietor. The ledge at the above depth, is found to be five feet thick, with a pay streak of three feet. The Bunker Hill company's shaft is situated on the south east side of Bodie Bluff and Hi Peak hills. They have now reached to the depth of 180 feet, and are taking out some splendid ore from the first level.

The High Peak Tunnel is situated on the west side of the hill. It is a fine location, and in time, when further advanced into the pe will become a valuable piece of mining property. The Crescent location was made about one year ago, and beyond a doubt is one of the most valuable in the district. It is favorably situated between the High Peak and Bunker Hill ledges. The proprietors of this splendid property have made two locations or claims on the same ground, so as to cover any and all possible contingencies of a dispute or counter claim that might arise. Location No. 1 claims one surface claim of two hundred feet square to each location, claiming all the gold and silver quartz veins, and all other minerals with all their dips, spurs, angles, stringers and feeders; also all cross ledges that may be found in said piece of ground. The area of said plat of ground is 400 feet wide and 1,000 feet long. Location No. 2 is on the same ground, and claims a ledge for the distance of 2,000 feet, with all its dips, spurs, angles and variations. The company have had both claims recorded in the county clerk's office at Bridgeport; also in the mining district recorder's office, Bodie. They have sunk a shaft 50 feet near the center of the claim. The size of shaft is 5 by 4½ feet, which is timbered in the most substantial manner. A new contract is about being let to continue the shaft down to the depth of 300 feet, at which point the great mother ledge of the district will be found. The owners are E. F. Mitchell, E. Rhoads, F. K. Becktel, D. G. Frances, E. B. Dickinson, D. W. Hastings and John S. Mayhugh. The last on the list, though by no means the least, is the Homestake and Stonewall Consolidation, situated on the south west slope of High Peak close up to the Potosi claim. This claim was discovered in the month of January last, by John W. Biderman, one of the principal owners, and was consolidated with the Stonewall to prevent litigation, thereby increasing the number of feet from 1,000 to 2,000. The thickness of the ledge is from 20 to 24 inches and it increases in size as the workmen descend upon it. Its general course is north and south. A recent crushing was made, and from 39¼ tons of ore the following amount was realized: Gold, $2,338.32; silver, $147.73. Total, $2,486.05. The value per ounce was $10.76. The company paid for mining $8 per ton; for hauling to mill, $5 per ton; crushing at mill, $15; making the total cost of bullion, independent of assaying and refining, $28 per ton. The company, a few days ago, let a contract to Brown & Co. for taking out 500 tons of ore—100 tons per month until the contract is finished. A good house has been erected over the mine, so as to enable the company to work their claim during all kinds of weather. The control is held by Biderman and Gibson. Cheering accounts are daily received from Columbus, Montgomery, Masonic and Kearsarge districts.

J. M. S.

PETROLEUM BRANDY.—Mr. Eli Bowen, professor of geology, in his work on "Coal and Coal-oil, or the Geology of the Earth," says that in a lecture which he delivered five years ago he said:—"No doubt we can and will distil from coal and oils very *good brandy, excellent camphene, gin*, and old, oily, nuctions *Monongahela Whisky!* * * * Singular as it may appear, brandy is now actually distilled, on a somewhat extensive scale, from the coal-oils of Pennsylvania." During the grape-vine disease in France, the dealers raised the price of brandy, alleging the disease as a reason for it. The journalists did not see the relation between grape-vines in France and the price of brandy in America. Probably they flattered themselves that they were making funny stretches of truth; but Mr. Bowen sobers down their conceits to mere matter-of-fact. We were informed, on *near* authority, that the champagne wine drunk at the dinner given in honor of the Russian naval officers, two years ago, was made in William street, and that there was not a drop of grape juice in it. Let France boast of grapes; but we will beat her with brandy and wine made scientifically from petroleum and other native materials.—*N. Y. Artisan.*

A WATER BOTTOM.—A Cincinnatian, at the Venango, Penn., oil regions, is stated to have become short of barrels to secure the fluid. His ingenuity was set to work, and he immediately put a bottomless tank into the water and directed the stream from his flowing well into it. The lighter quality of the oil kept it above the water, and when the receptacle became filled, the enterprising miner cut loose his moorings and floated down the river to the refinery.

[Written for the Mining and Scientific Press.]

Letter from the Santa Clara Oil Region.

EDITORS PRESS:—I have been spending a few days in the hills above Lexington, and thinking that perhaps you would like the facts in regard to the oil interests of this county, I have written the following, which, if you deem it of public interest, you are at liberty to use:

A ride of two hours, along grain fields, contradicting the oft repeated assertion of "poor crops," found us at the Forest House, sixteen miles from San Jose, and one and a half above Lexington. This is the headquarters of the "oil men," of whose presence we were soon made conscious, by their oily looks and talk, and their bottles of dark liquid, which they were convincing the crowd was almost as clear as mud; though they affirmed it was "*very pure*," and though it might smoke a little, it was a *very superior article*, etc.

We soon caught the oil fever, and found ourselves "smelling round" like the others; so, after lunch, we started for a tour of inspection of the various oil lands in the vicinity. The first claim visited is being worked by Messrs. Shaw & Weldon, and is near the Santa Cruz road, about one and a half miles above the Forest House. It is at an elevation of 1000 or 1100 feet above tide water, and not far from half way up the ridge, in a narrow cañon, which widens, however, at this place, and makes room for the saw mill of the Moody Brothers. Messrs. Shaw & Weldon had no surface indications of their own, but were induced to sink a shaft by the indications upon the ground of the Santa Clara Oil Co., some 350 yards above them. Their shaft is down 124 feet; is three by four feet inside the timbers; they have passed shals, limestone and sandstone, alternately, and are now working in sandstone, which is saturated with petroleum. The first indications were found at 30 feet, where they passed a stratum smelling like a "lamplighter;" at 105 feet another, and from 115 to 124 feet, the water, after standing a little, is covered with oil. This company purposes to sink as far as practicable, their open shaft, and then to put on steam or horse power and bore a 5-inch hole. They have the boring machinery on the ground.

THE SANTA CLARA COMPANY.

The superintendent of the Santa Clara Co's. works, is G. B. McClaren. This company had fine surface indications, and commenced work with a small engine, putting in a 7-inch tubing. At the depth of fifty feet they found a strutum which yielded about three gallons per day; at 93 feet another, of the same yield; at 117 feet another, yielding a little more, and at 140 feet, one yielding 40 gallons per day. After the work had been suspended one day, the company commenced with a 7-inch pipe, but at the depth of 70 feet, they struck hard rock, and supposing they would have to put no more pipe in, they drilled a little smaller hole, and soon pierced the rock and had to put in a 6-inch pipe, and went down 119 feet, where the same thing was repeated, and they put in a 5¼-inch pipe to the depth of 136 feet. Now, at 143 feet, they find themselves obliged to put in a 4½-inch pipe. The country seems much broken by volcanic action, and they may have to go to a great depth. The experience of this company is a valuable lesson to the others.

GOULD & CO'S. CLAIMS.

Nearly one and one-half miles due north from here, Gould & Co. found indications, and have commenced boring a 4-inch well; they expect to use horse or steam power soon,

THE AURORA DE LOS GATOS COAL COMPANY,

In prospecting their claim for coal, in this same neighborhood, have also caught a "sniff at the stuff" in their shaft, which is down 180 feet. Going south from here, until the ridge is crossed, we gradually descend for two miles to the head-waters of Soquel creek, where we find

HALEY & CO.

At work, and confident of "striking it." The sand here upon the hill side is impregnated with oil, as I found the soil in the valley, some six or seven miles below, at one of my camping places. This company have an engine, and are putting in 4½-inch pipe, but have just commenced work. The country upon this slope towards the bay of Monterey, does not present so broken an appearance as it does upon this side, and I expect to hear, ere long, of "strikes."

The most of those who are developing this branch of mining here, are men from the oil regions of the East, and they seem to be quite willing to invest their money, and think they will succeed in astonishing the nations before long, and convincing the world that California is an oil-producing State, not inferior to her sister States of the Atlantic slope.

Santa Clara, July 12, 1865. E. T. B.

[Written for the Mining and Scientific Press.]

Markleeville Correspondence.

MESSRS. EDITORS:—From the midst of towering mountains, roaring streams and sighing pines, I again drop you a few lines.

There is something romantic in the thought of "living in the mountains," and I have often wondered how some persons can be contented to settle down upon some vast plain, and behold only flocks and herds, sage-brush and sand, all their days; or on some sea-shore, and spend their lifetime, with little else to be seen save the "waste of waters." To the mountaineer, who is accustomed to a variety of mountain scenery, there is scarcely any association that is more saddening to the mind than to come in close proximity with "wind and wave;" and although he may be acquainted with frequent perils and storms in the mountains, yet the howling tempest and the roaring sea afford no music to his ear. He loves not to hear the deep murmur, the requiem of the vast number whom it has entombed, and fears, lest perchance a storm may rush forth from his hiding place, at some unsuspected hour, and awaken the deep in all its "fearful power." But he ever loves to behold the huge, old, heaven-towering peaks around his own mountain home, and to reflect that the storms of centuries have spent their strength against them, but still they stand as everlasting monuments of the Almighty's power.

In the immediate vicinity of Markleeville are two noted peaks, which rise several hundred feet above the tops of their surrounding brethren. Carson peak is in the rear of the city, and although it looks to be only a few miles away, yet a person would have to travel a distance of nearly eight miles to reach its summit. On the 4th of July, 1864, a party from this place visited the top of this mountain, taking with them an Indian, provisions and blankets. They had a grand view of the surrounding country; for from its summit can be seen the greater portion of Carson valley, Carson cañon, the valleys of Faith, Hope and Charity, besides a world of mountain scenery. After feasting their eyes to their heart's content, they planted there that glorious old banner which shall continue to "wave o'er the land of the free and the home of the brave;" and then giving three hearty cheers for every thing they could think of, they pitched their tents, and lodged in the region of the clouds.

But a better view can be obtained from the summit of Mount Pisgah, which lies in full view of the city, in Great Mogul District. I had often thought that I should like to visit the top of this mountain, so as to take a view of "the promised land;" and only a few days ago I set out for that purpose, in company with a good looking *hombre*. We had a hard old tramp up the rugged sides of the mountain, climbing over precipices, tumbled rocks, and creeping through bushes, without a drop of water to cool our parched tongues, save here and there a patch of snow, into which we plunged, like the thirsty ox. But the summit once gained, I was abundantly rewarded by a magnificent prospect—a prospect surpassingly grand and impressive. I felt that I was above the rest of mankind; the world was beneath my feet, and I knew not which way to look first. I found myself entirely fascinated, charmed and spell-bound, with nothing to break the solemn silence, while there was a spiritual existence so intense—a dreamy enchantment, so inexpressibly beautiful—that I was reminded of naught but Nature and Nature's God. I stood upon one of the hoary monarchs of earth, over whose summit the storms of centuries have swept, and while nations have arisen, flourished and passed away, this summit has stood firm as the everlasting hills, and will continue to stand till time shall be no more. In this relation I found a solitude, which to be realized, must be felt. It is in such a place as this that a man can think without an effort; for thoughts crowd upon him thick and fast, there being a voice in Nature, solemn, but grand. He can retire into the depths of his own spirit, and hold converse with self, and feel that he is immortal. It was not in vain that the early Persian made the everlasting mountains of our earth his altars, and thus sanctified an unwalled temple to the worship of the Eternal Spirit.

Compared with Nature's realms of worship—the bosom of the deep, the clear, cold atmosphere, the summit of the mountains, and the glades of the forests—how utterly insignificant are all the temples of earth, reared by the hands of man! And if this beautiful world, with all its flowers and sweets, its lakes and rivers, its broad plains and fertile valleys, and its towering mountains that overlook half the world, be only the "foot-stool" of the great Creator, what must His throne be? When we are permitted, from an eminence like this, to behold the beautiful works of creation; to gaze upon the handi-work of the great Creator, and to reflect that millions of planets, of greater magnitude than our earth, are revolving through unlimited space, and all obeying the fixed laws of the Almighty, it is saddening to remember, "The fool hath said in his heart, there is no God."

It has been often said that the beauties of an ocean sunset, or a storm at sea, cannot be fully described on paper, and it is equally true that a correct description of the surroundings from such a place as this cannot be told with pen and ink. The great Carson valley is spread out like a panorama at my feet; the bed of the valley reposing at a depth of fully three thousand feet below. The large ranches, containing several hundred acres, look like mere corrals, while dwellings, barns and hay-stacks dwindle away nearly to the size of ant-hills, and numerous herds of flocks are hardly discernable. The center of the valley is entwined by the crystal waters of the Carson river, winding its serpentine course to meet the foaming surge that breaks upon the sand beach at its—tut! tut! my pen—no sentimental thoughts here—the Carson sinks under a lot of sage-brush 'way out toward Reese.

Mt. Davidson and the mountains of Washoe lie in the "regions beyond," and look to be only a few miles away, while the Ophir grade is plainly seen without the aid of a glass. The whole range of the Sierras, with their snow-capped peaks, lie to the west. The tall peak in the rear of Silver Mountain, whose snow-capped summit towers aloft, reminds one of the "frosts of many winters." The city of Markleeville looks but a rifle shot distant, and the deep gorge of the Carson's bed is readily traced for miles away towards its source. Some of the principal mines of this region are also seen from this "stand-point of silence." The stars and stripes are seen fluttering over the Good Hope works in Alpine. The pink-colored hill, on which is situated the Lord Byron and Great Republic claims, is also in full view, and so is the Morning Star claim, with its massive croppings.

On looking around for something on which to cut my name, I saw a sign-board nailed to a tree, with simply the words "Mt. Pisgah," and near by a pile of rocks, with the corner of an envelope exposed to view. I hastened to obtain items of the adventurer before me. It contained a sheet of letter paper, written with a pencil, and had the appearance of having been written and exposed to, at least, two winters, as some of the writing was almost illegible. Some sentimental individual had doubtless visited this peak in the year 1863, to take a view of the promised land, prior to his exit from the country. The document had neither signature or date, but read as follows:

"This peak shall be known as Mt. Pisgah, and as Moses was enabled to behold from Pisgah's top the land of Canaan—a land flowing with milk and honey—so we can behold from this lofty summit a land of promise, filled with gold and silver, and big with future prospects; for the time is not far distant when mines shall be opened in all these mountains, and thousands of claims shall produce an abundance of the one thing needful. Then this solitary place shall be a delight, and the wilderness shall blossom as the rose. The mountains, also, shall rejoice with the music of mills, they shall echo abundantly with the sound of the whistle, even with the sound of the steam-whistle shall the mountains awake, and the clatter of ten thousand stamps shall be music in the land. Then shall be seen the glory of Alpine, and the excellency of Mogul. Monitor and Silver King shall strengthen the feeble knees (of capitalists). Silver Mountain, also, shall say to them that are of a fearful heart, behold our mines are good; only invest thou, and you shall find silver bricks in your hats. Then shall the eyes of the blind be opened and they shall see for themselves and not another. The ears, also, of the deaf shall be unstopped, and they shall hear and believe. Then shall the poor man be lifted up, and the desponding soul shall sing for joy, because the time foretold has come, and thousands from the ends of the earth shall behold the richness of our mines. And a highway shall be opened, and it shall be called a toll-road. The strapped shall not pass over it, but it shall be for those who have the spondulix; and teamsters shall bear merchandize thereon. No jackass shall be there, nor pack-train go up thereon. They shall not be found there; but miners shall ride there, and they shall return to the Bay with joy upon their heads, and the everlasting rhino in their pockets, and the blues shall flee away."

I wondered how the adventurer got down from the mountain, and thought, perhaps, he sat down and took a slide; but then would he not desire to change his base? and I saw no place where he could make a flank movement, and thus reach level ground. As for myself, I found it quite difficult to reach the regions below, and after visiting several mines in the course of my travels, I reached my domicil at a late hour, hungry, foot-sore and tired.

PROTECTION AGAINST THE TERREDO.

An officer of the Imperial Navy of France, Lieut. Mariot, being in Cochin China, learned that the natives possess a secret for protecting wooden vessels against the depredations of the terredo, an insect which does immense damage to ships and timber on the shores of the Black Sea, the Mediterranean, the Asiatic, and other waters. The Cochin Chinese refuse to tell the secret; but Lieut. Mariot, by diligent inquiry, ascertained that it consists in the employment of a mixture of resin and oil obtained from trees in that country. He further ascertained that it is so effective as a preservative, that junks—so old that the precise year of their construction is forgotten—are, though constantly plying in waters in which the insects abound, still sound and strong. He has communicated his discovery to the French Emperor, who has manifested great interest in it; and, at his majesty's request, Lieut. Mariot is to return to China to make further inquiries, and to bring back some of the wood steeped in the mixture.

REMARKS.—It is more than likely that the "mixture" above referred to may be either the crude petroleum, which abounds in that region, or the residuum after a partial evaporation or distillation thereof. It is well known that both petroleum and bituminous coal contain a large quantity of carbolic or phenylic acid, which is death to all animal life. We are told that the terredo has been gradually disappearing from the harbor of San Francisco since the establishment of the gas works on Howard street. The cause is no doubt rightly attributed to the fluid refuse from those works which is discharged into the harbor, and which contains a large quantity of this acid. It may often be seen in still weather, upon the surface of the water, in the vicinity of the gas works, and, as the tide falls, it adheres to the piles, forming a coating, which by repeated applications, penetrates the wood sufficiently to render it extremely unpleasant, if not absolutely impossible for these pests of our harbor to pursue their accustomed work upon the piles. The extraordinary antiseptic power of this acid is well known, and largely employed to preserve railroad sleepers and other timber from decay. Probably a creosoting or kyanising process might be externally applied to piles, before being placed in the water, which would also completely prevent all trouble from the ravages of the terredo.

THE PITCH LAKE OF TRINIDAD.—This lake covers an area of ninety-nine square miles, and is of very great depth. "The bitumen is solid and cold near the shores of the lake, and gradually increases in temperature and softness toward the center, where *it is boiling*. The ascent from the lake to the sea, a distance of three-quarters of a mile, is covered with a hardened pitch, on which trees and vegetables flourish, and about Point la Braye, the masses of pitch look like black rocks among the foliage." Mr. G. P. Wall describes the lake as yielding three kinds of asphaltum: "1. Asphaltum glance, which is hard and brittle, of an intensely black, brilliant lustre, and conchoidal fracture. 2. Ordinary asphaltum, of a brownish-black color, containing from 20 to 35 per cent. of earthy admixture and a considerable proportion of water and possessing the property of plasticity, which it gradually loses on long exposure to the sun and atmosphere. 3. Asphaltic oil, occurring associated and diluted with water, but appearing, when concentrated, as a dense black fluid with a powerful bituminous odor. If collected in an open vessel, the more volatile part of this oil evaporates after a few months, leaving a solid black substance, of similar appearance and analagous properties to asphaltum glance."

A COTTON MILL, it is said, is about to be erected at North Beach, in this city. This is the second cotton mill projected in this State.

City Stock Reports---San Francisco Stock and Exchange Board.

From the "Weekly Stock Circular" of the Associated Brokers.

SAN FRANCISCO, SATURDAY MORNING, July 22d, 1865.

The money market continues to be well supplied with capital and rates are easy. Accommodations in bank are readily obtained at 1¼@1½ ℔ cent. per month, and upon the street negotiations are made at 1½@2½ ℔ cent. per month, according to circumstances. At the present moment we have the prospect of an easy money market throughout the Summer and Fall.

Receipts of treasure from the interior, since Saturday last, amounted to $950,000, making an aggregate of $3,150,000 thus far the current month.

Sales of gold bars were made for the Panama steamer at 820@830, and silver ruled at about par for round parcels. The total coinage of the U. S. Branch Mint, in this city, during the past fiscal year (ending June 30th) amounted to $19,000,000; of which sum $18,500,000 was in double eagles. The total coinage of gold and silver at that establishment during the previous fiscal year, reached an aggregate of $19,400,000.

Legal Tender notes have been dull and inactive this week and small sales were made at 73⅝@73⅜, closing at 73½ bid, 73¾ asked. Our latest telegraphic advices from the East quote gold at about 143½ on the 18th inst.

No important changes have taken place in the share market, and some leading stocks are tolerably well maintained. A number of shares of less intrinsic value have revived a little, and some transactions were made at a slight improvement over former quotations. There is, however, not much disposition to invest in these fancies as yet.

Gould & Curry has met with no sales, but is freely held at about $1,760. The drift now 300 feet distant from the D street shaft, at a depth of 200 feet below the lower tunnel, has penetrated what is supposed to be the clay seam of the ledge, but no tangible evidence of the existence of a pay vein at this point has been found thus far. The deliveries of ore from the upper levels are averaging about 90 tons per day, and will amount to some 2,800 tons for the current month. Receipts of bullion from this mine, last month, amounted to $168,000, but a larger yield is anticipated for the month of July. The dividend is likely to be the same, however—$50 per foot.

Alpha continues apathetic, but strongly held. Small sales were made at $1,460, and$1,500, closing at $1,470 bid. Some good ore is now being taken from the lower and upper levels of this mine.

Savage is in less favor, declining from $1,415 to $1,340, then selling at $1,310, and closing at $1,325. The product of the mine is now averaging about 65 tons per day, but the ore is of poor quality. From the annual report of the officers of this company, made to the stockholders yesterday, we glean the following items: During the past year, ending July 1st, the total product of the mine amounted to 51,680 tons, 1,941 tons of which was first class ore, 49,303 tons second class, and 199 tons third class. The total yield of this ore in bullion (exclusive of some small shipments to Europe) amounted in the aggregate to $2,256,285. The reduction of all the ore has cost $1,115,000, and $520,000 were disbursed in dividends. The expense of reducing first class ore was $47.46, and second class $20.76—an average of $21.76 per ton. The yield of first class ore amounted to $119.92; second class $41, and third class $14.94—an average product of $43.87 per ton. The cost of mining, and other operations incident thereto, have averaged $10.22 per ton for all the ore raised to the surface.

Yellow Jacket was dealt in to the extent of 163 feet, advancing from $1,090 to $1,200, receding to $1,090 again, then selling at $1,015, and closing at $1,040. The company are now hoisting about 100 tons of ore per day, the quality of which is said to show some improvement.

Crown Point has been in better favor, and 103 feet were sold, advancing from $810 to $920, receding to $910, and changing hands yesterday at $900@970. A new deposit of good ore has been found in sinking from the 230-feet level. A late crushing of ore yielded some $58 per ton.

Belcher is in fair request and well maintained. Some 50 feet were sold, receding from $840 to $810, rallying to $850 and closing at $825 @830. There is no new development in this mine. Hale & Norcross fell from $582½ to $565, and sold yesterday at $560@565. Drifting has re-commenced toward the east.

Ophir rose from $480 to $540, then sold at $492@450, some 37 feet in all changing hands. The second trial of the Burning Moscow *vs.* this company, has resulted, as before, in a disagreement of the jury. The yield of the Ophir mine for the first half of this month amounted to 512 tons of ore, averaging $50@75 per ton. Receipts of bullion thus far the current month have been about $37,000. Drifting continues east and south from the Mexican shaft.

Chollar dropped from $400 to $380, advanced to $412, and sold yesterday at $415@425, some 145 feet changing hands. Potosi fell from $390 to $375, rose to $405, and closed at $400@,412½ within which range 271 feet were sold. The joint product of these two mines now amounts to some 40 tons per day. The new cross-cut from the fifth station of the Potosi penetrated a small vein of good ore last week, and a drift will now be continued to the fifth level of the North Chollar mine. There is no change in any other portion of either mine.

Uncle Sam has been active, and nearly 500 shares were dealt in, opening at $335, declining to $295, rallying to $325, dropping to $302 and selling yesterday at $295@290. Overman fell to $292½, rose to $310, receded to $300, and closed at about $290 asked. A new body of good ore has been disclosed in the east cross-cut of the third level near the north line of this mine. The company are now hoisting considerable ore to the surface, and propose to commence crushing at once.

Imperial receded from $237 to $233, rose to $240, declined to $218, then sold at $210, seller 30, and closed yesterday at $229@227. Active operations in this mine have been suspended for a few days in order to perfect some improvements to the main shaft; meanwhile a sufficient reserve of ore gives full employment to both mills. The second "clean up" this month is said to have been favorable, realizing some $20,000, and the entire receipts of bullion for July, from the company's two mills, are likely to exceed $70,000, exclusive of some $40,000 worth of first-class ore now being treated at Dall's mill. The ordinary expenses for the current month will amount to about $35.000.

Bullion has been dull and inactive at $190@182½, closing at $185. North American fell from $40 to $37½, rose to $51, buyer 30, receded to $42, and closed at $41. Burning Moscow fell from $31 to $26, rallied to $28½, fell to $25, and sold yesterday at $29. Sierra Nevada rose to $18, fell to $14, and closed at $15 asked. Lady Bryan rose from $6¼ to $8½, fell to $6¼, and sold at the close at $6½. Daney was sold at $13; De Soto at $8@10; Baltic at $17@13, and Golden Rule at $7½@8.

The aggregate sales of Stocks and Legal Tender notes since Saturday last, amounted to $938,134.

MECHANICS' FAIR.

DAILY PRESS.

e Proprietors of the MINING AND SCIENTIFIC PRESS having been granted the privi- of printing the DAILY PRESS at the Pavi- during the approaching Exhibition, are ng complete arrangements to publish a nd faithful record of the Grand Exhibi- and will present gratuitously to all visit- id exhibitors the LARGEST, most ATTRACT- nd VALUABLE paper ever issued at a pub- r.

Its Free and Extensive Circulation

ender it a peculiarly desirable journal for tising. From SEVEN TO EIGHT THOU- individuals visited the exhibition last n in a single day and evening.

r printing press, in active operation, rap- hrowing off an interesting sheet into the nands of the anxious throng, presents an ctive scene, affording one of the most and effective modes of advertising ever d through the columns of a newspaper. persons being eye-witnesses to the print- the paper, preserve copies as reminis- s of their visit to the Fair, while others re bound volumes to be retained as a per- nt record of the Exhibition, giving a fur- benefit to advertisers in addition to its circulation.

ose wishing to secure space for adverti- n the MECHANICS' FAIR DAILY PRESS, o well to make early application to the ictors or their agents.

yment will not be solicited until after the tisements appear and are found to be ding to contract or the satisfaction of the tiser.

DEWEY & CO.,

t Agents, Publishers of the Mining l Scientific Press, and Job Printers, 505 y street, San Francisco.

Notices of the Press.

wing are a few of the select compliments paid the lume of the DAILY FAIR PRESS, last season:

SCIENTIFIC PRESS proprietors strike off and give away nds of their little sheet, entitled THE MECHANICS' AILY PRESS. The second issue of this paper, pub- last night, gave the multitude some intelligence of shoo disaster. There were great crowds all the g about the telegraph and the presses, many of had their first sight at the practical working of great motors of civilization.—[S. F. Evening Bul- ept. 7, 1864.

TIFIC PRESS.—A printing office has been established Mechanics' Fair, and Messrs. Dewey & Co., the ca- ing publishers of the MINING AND SCIENTIFIC PRESS, uing from it a handsome double sheet daily, which edit to themselves, its editors, and to the Fair.—[S. ning Call, Sept. 8, 1864.

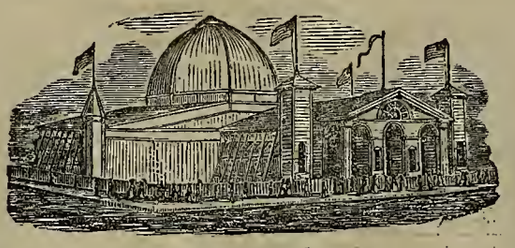
MECHANICS' FAIR DAILY PRESS is the title of a very uarto paper published at the Industrial Fair Pavil- Dewey & Co., of the MINING AND SCIENTIFIC PRESS. ets great credit, as does the weekly upon the en- e and ability of the publishers. We want it rogu- -[Reese River Reveille.

NEW color called "green cinnabar" is l by a foreign cotemporary to be prepared e following manner: Prussian blue is lved in oxalic acid, chromate of potash is d to this solution, which is then precipita- ith acetate of lead. The precipitate well ed, dried, and levigated, gives a beautiful powder. By varying the proportions of hree solutions, various shades of green be procured. Chloride of barium or ni- of bismuth may be used in place of sugar d.—*Mechanics' Magazine.*

PIECE of native copper, weighing 36 ds, was recently found on the farm of Mr. ussell, at Metamora, Lapeer county, Mich., tly imbedded in the soil, and was torn up e plow. A few years ago, a piece larger the one above referred to, was found a distance from where this was exhumed.

LENOIR, the inventor of the gas engine, evised a kneading-trough which is adapted c gas engine, and which any journeyman r can manage after half an hour's instruc- The mechanism performs exactly the of the baker's arms, without the disagree- accompaniments of the human machine.

THE FIFTH INDUSTRIAL FAIR



OF THE MECHANICS' INSTITUTE OF SAN FRANCISCO,

To be Held in the Mechanics' Institute Pavilion in August, 1865.

The Mechanics' Institute having determined to hold their Fifth Industrial Fair during the coming season, the Executive Committee would respectfully invite all persons desirous of exhibiting Machines, Manufactures, Agricultural Implements, Horticultural Products, Minerals, Ores. and Works of Art, to make application immediately, in order that the proper space may be allotted them.

The Exhibition will be open to the public on Thursday, the 10th day of August, at 10 o'clock A. M.

The general management of the Fair is entrusted to an Executive Committee, consisting of the officers of the Institute.

No contracts or agreements will be recognized unless made by the authorized agents of this Committee.

A competent person will be in attendance at the Pavilion to receive and register all goods designed for exhibition, and will receipt therefor.

Contributions of Machinery and other articles that require long time to prepare for exhibition, will be received from the 15th of July to the 2d of August.

Articles for exhibition that require large space may be entered on or before the 20th day of July, and space will be allotted to the exhibitor on or before the 2d of August.

The Picture Galleries will be ready for the reception of Pictures, Embroideries, Wax and Fancy Work of all kinds, on the 1st of August, when space will be allotted.

The Committee will be prepared for the reception of Fruits, Flowers, Agricultural and Horticultural Productions, and design to have the tables so arranged that the best display possible can be made in this department, and every effort will be made and care taken to preserve their freshness, so that exhibitors may receive full credit for their productions. Those wishing space on these tables should engage it at an early day. There will be space reserved for additions in this department during the Fair.

The several transportation companies, as on former occasions, have, with commendable liberality, consented to transport articles intended exclusively for exhibition free of charge, and Messrs. Wells, Fargo & Co., in like manner, will take charge of them.

The Committee have the fullest confidence that the coming Fair will not only be the most complete and varied in its character, but will also be more attractive than any previous exhibition of this kind on this coast.

No pains or expense will be spared to give the contributors satisfactory opportunities in the spacious pavilion of the Institute for the display of their contributions, and to furnish whatever may be necessary to make the Fair an institution where those who frequent it may be both pleased and instructed.

All articles forwarded should be labeled "For the Industrial Exhibition," San Francisco.

All communications to be addressed to C. S. HIGGINS, Corresponding Secretary.

NOTICE.

The co-partnership heretofore existing between John Youngborg, Stephen H. Covert and William B. Gleason, is hereby dissolved by reason of the said Gleason and Covert having left for the East. This is to notify all persons that I shall pay no debts contracted by the said parties from and after this date. JOHN YOUNGBERG.

San Francisco, May 15th, 1865. 20v10-1m

New Volume

—OF THE—

Mining and Scientific Press

Issued every Saturday. Each number contains 16 pages and 64 columns (size of Harper's Weekly).

PUBLISHED BY

DEWEY & CO.,

Patent Agents, Publishers and Job Printers, 505 Clay Street, San Francisco.

THE ELEVENTH VOLUME

Of the MINING AND SCIENTIFIC PRESS commences under advantages most gratifying to its publishers, who assert, with pleasure, that a continued improvement in this journal may be anticipated by its numerous and rapidly increasing readers.

We shall continue to devote a large space in our columns to the various and best methods of treating ores and saving gold and other precious metals in every form, furnishing valuable hints to millmen, prospectors, oil-workers and miners generally, not to be found in any other publication.

New machinery, latest inventions and discoveries, and all matters pertaining to the mechanical, manufacturing and industrial resources of the Pacific States, will receive careful attention.

Stock market reports will be published as received from the official records. Our carefully compiled "Mining Shareholders' Directory" will prove a faithful monitor to parties holding stock, and a desirable record for reference to brokers.

Friends pleased with our efforts in the publication of the PRESS can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and News-dealers, acting as our agents, will receive liberal commissions.

C. W. M. SMITH ..... W. P. DEWEY ..... A. T. DEWEY.

1852. 1865.

Thirteenth Year of Publication.

THE GOLDEN ERA.

Founded in 1852.

The oldest Weekly Paper in the State, permanently established, and more widely circulated at home and abroad than any other on the Pacific Coast. In California, the Atlantic States, and throughout the entire field of its great and rapidly increasing circulation, THE GOLDEN ERA is universally regarded as a Literary and Family Journal of unequalled excellence. Among its contributors are all the best writers on this side of the Continent, and correspondents of distinguished ability in New York, Paris and London.

Liberal Terms to Clubs.

THE GOLDEN ERA is furnished to CLUBS at the following rates: Three Copies, one year, Ten Dollars; Five Copies, one year, Fifteen Dollars; Ten Copies, one year, Twenty five Dollars. An extra copy will be forwarded, free, for one year, to the person sending a club of five or ten subscribers.

THE GOLDEN ERA is now enlarged by the addition of eight columns to its pages—and presents fifty-six columns, containing the greatest possible variety of Valuable and Entertaining, Original and Selected Matter, all combining to render THE GOLDEN ERA a Literary and Family Journal of surpassing interest and attraction; a Welcome Guest in Cottage and Cabin; the favorite at the fireside in City and Country, the most useful, agreeable altogether desirable publication for California readers and their kindred and friends in the Atlantic States, Europe, and elsewhere. Every Household in the Mountains and Valleys, the Cities, Towns, and Mining Camps of California and throughout the Pacific States and Territories, should receive and welcome THE GOLDEN ERA as a regular weekly visitor.

Serial Romances in The Golden Era.

The most popular Novels of the present day published as Serials, from week to week, in the GOLDEN ERA, from advance sheets, simultaneously with their appearance in the English and Atlantic Periodicals.

Among the contributors to the GOLDEN ERA are all the prominent writers of Literary Repute in California and on the Pacific Coast, also correspondents and contributors of distinguished ability in the Atlantic States and Europe, comprising an array of Talent and Genius unapproached by any Literary Journal in California, the Atlantic States, or Europe.

IN THE GOLDEN ERA,

"THE FAIR LILIAS;"

Or, "LIFE IN DEATH,"

A New Story, by PIERCE EGAN, Author of "The Poor Girl," "The Flower of the Flock," "Lady Maud," "The Snake in the Grass," "Such is Life," Etc.

PIERCE EGAN is undoubtedly the most fascinating and attractive Novelist of the age. His stories are eagerly sought for, read and admired by hundreds of thousands in England and America. "THE FAIR LILIAS; or, Life in Death," surpasses, in exciting interest and thrilling situations, all of the productions of the celebrated author, and is Pierce Egan's masterpiece.

THE GREAT SERIAL,

"OUR MUTUAL FRIEND,".....By Charles Dickens.

TO ADVERTISERS.

Best Advertising Medium.—The Golden Era is the oldest Weekly Journal in California, and indisputably enjoys by far the largest circulation in the city of San Francisco and in the interior of the State.

THE GOLDEN ERA

Is universally read in every city, town, village and mining and agricultural precinct in California, and offers unusual and unequalled advantages to those who desire to bring their business prominently before the community. Only a limited space is devoted to advertising. All advertising pages are also largely occupied with fresh and interesting reading matter, and no advertisement can escape attention. The charges for advertising are not so large, proportioned to the benefits derived, as those of other papers Liberal terms will be made with those who advertise for three or six months, or by the year.

is Impossible for editors to know all the merits demerits of their correspondence, consequently the er must not receive the opinions of our contributors r own. Intelligent discussion is invited upon all subs the evidence of any error which may appear will be re- ed in friendship and treated with respect.

merican and Foreign Patents.—Letters Patent inventors can be secured in the United States and foreign tries through the MINING AND SCIENTIFIC PRESS PATENT ICY. We offer applicants reasonable terms, and they rest assured of a strict compliance with our obligations, faithful performance of all contracts. For reference, ll furnish the names of numerous parties for whom ave obtained patents during the past two years.

vorable to Inventors.—Persons holding new in- ions of machinery and important improvements, can be same illustrated and explained in the MINING AND ntific PRESS, free of charge, if in our judgment the very is one of real merit, and of sufficient interest to eaders to warrant publication.

yment in Advance.—This paper will not be sent bscribers beyond the term paid for. The publishers know that a good journal cannot be sustained on the t system.

San Francisco:
turday Morning, July 22, 1865.

Removal.

The Office of the MINING AND SCIENTIFIC PRESS has been moved to the old printing stand known as Waters Bros. & Co's, southwest corner of Clay and Sansome streets, opposite the Niantic Hotel (being one block south of our former location), where we may now be found, with more commodious apartments and an extensive JOB PRINTING OFFICE.

San Francisco, April 10th, 1865.

Canvassing Agents.

We would call attention to the following named agents of the MINING AND SCIENTIFIC PRESS as gentleman worthy of the countenance of any community which they may visit, and assistance rendered them in their efforts, by friends and patrons, or our brethren of the Press, will be acknowledged as a personal favor to us:—

Mr. **Robert Lattimore**—Amador and Alpine counties and the State of Nevada.

Mr. **Jos. Poyzer**, of Grass Valley, for Nevada, Yuba and adjoining counties.

THE PETROLEUM INTEREST---ITS EXTENT AND IMPORTANCE.

Even the most sceptical of our metropolitan citizens is now beginning to acknowledge the positive testimony which is daily accumulating, to the actual existence of coal oil in California.

Instead of ridiculing the efforts which are being made to tap this great source of wealth, and using its best endeavors to dissuade Eastern and Eastern capitalists from investing in such operations, as it did but a few weeks since, that portion of the press is now exerting its full belief in the reality of this promising interest. The croakers being now effectually silenced, it may be profitable to take a brief survey of the field and endeavor to form some idea of the position which California is destined to hold in the development of this great source of our national wealth.

Up to the present time we have not heard of any well authenticated instance of a flowing well in this State, although reports to that effect have been from time to time started; but we do hear reports, and most fully authenticated, of large quantities of oil being struck in numerous localities, in such quantities as to flow from a few feet to near or quite a hundred in depth in the borings; and in several instances a considerable quantity of the oil has been taken from the wells and shipped to this city and refined. The evidence at the Pico Mattole is almost positive of the ability of the proprietors to strike a flowing supply at a few additional feet in depth.

At Tulare valley a well has been sank, which is less than fifty feet, is said to be capable of producing a large quantity of oil. About a thousand gallons have been brought from this locality to San Francisco and refined, producing an illuminating oil equal to the best imported. The testimony of the existence of flowing springs, in the lower portion of the State, producing large quantities of oil, though doubted at first, is now fully believed. In addition to the evidence from the land, we have the farther testimony that California possesses reservoirs of oil, capable of producing flowing wells, from the well established fact of the existence of several oil springs beneath the bottom of the sea, off the coast of Santa Barbara county, from whence this liquid is discharged in great profusion, so that for many miles, and at several different localities, vessels pass through it in such quantities upon the surface of the water, as, in still weather, to prevent the usual ripple of the water at the vessel's prow; seeming to move noiselessly and smoothly as through a sea of oil. The actual locality of at least one of these springs has been carefully noted, where, when the sea is calm, the oil may be seen coming up from the bottom, several fathoms deep, in a long, wavy and distinctly defined column until it reaches the surface and spreads over the sea. This flow has been continuous, in all probability for *hundreds and thousands of years*, and affords a most unanswerable argument against the limited supply theory with regard to these subterranean reservoirs, either at the East or in California. If natural flows of such vast extent exist in that locality, why may we not expect the same results to follow, at least, some of the artificial openings which are now being made at so many points up and down our extended coast? The fears of a limited flow sometimes expressed in consequence of the asserted failure of oil wells at the East are scarcely worth consideration, from the fact that the bad management by which they often became choked with water or paraffine, or bad tubing, or defective seed bags, will be eventually overcome by experience; or the flow regained by going deeper. When a large number of wells are sunk in a small locality, as is often the case in Pennsylvania, the same result will follow as does the energetic working of a coal mine—a particular locality will be worked out, but generally only to lead to a still greater supply near or distant. Nobody disputes the practical inexhaustibility of our coal mines—there is just as little doubt with regard to the practical inexhaustibility of our oil wells.

In this connection it may be remarked that there is no one product of nature, which is at all essential to the happiness and prosperity of man, which he has ever yet been able to exhaust. It has long been considered as one of the wise providences of the Creator, that the great necessities of iron and coal, though non-progressive, should be, by their abundance, equally as inexhaustible, by the puny efforts of man, through all his countless generations, as the re-producing vegetable and animal products, or even the elements themselves. It seems obvious, from the vast superficial extent over which petroleum has been found, and the fact that we have historic evidence of the existence of natural springs through thousands of years, coupled with the seeming necessity for just such a material that this wonderful subterranean supply should bear the same relation to the wants of man as do those twin elements of civilization and progress—coal and iron. Where else in the economy of nature shall man look for his future supplies of artificial light, or the lubricating agent so indispensable to the gigantic increase of the modern railroad, with its rolling wheels, busy workshops and the endless multiplication of machine shops, which springs up everywhere along its track? Surely the utmost of human researches into the mysteries of chemistry, since the decline of the whale fishery, are not able to give us even the most distant clue to any supply at all adequate to the present, to say nothing of the prospective demand. Fuel and iron would soon have become shorn of their greatest benefit had not an all-wise Creator, from the beginning, provided a third agent, to form a triune power, by which His creatures should be able to move forward and upward in the great march of progress, which He has evidently marked out for their accomplishment.

The evidence of its practically unlimited supply is already such as to warrant mankind in taking the assumption as a fact, and so governing their operations as to take the fullest advantage of this new and unexpected source of wealth. To this end the geologist is already applying his researches, fully cognizant that he has never before had brought to his consideration a question of greater practical importance. So well has he entered upon his labor that he has already mapped out its localities with such skill that oil boring is now no more a speculative operation than is mining for coal, iron or copper. The inventor, with his ever ready and practical ideas, is also laboring to devise additional facilities for raising, transporting and rendering serviceable to man, this new article of commerce; and the books of the patent office during the last three or four years, have been thickly interspersed with the records of hundreds of new inventions, called forth by this wonderful agent. The chemist, too, is bringing to bear all the skill of his mysterious labors to thoroughly comprehend its nature and applicability. Already through his efforts in this direction, has the world been called upon to witness and acknowledge the most astonishing evidences of the obligations of commerce to scientific research. The fears which at first took possession of the minds of men that the profusion in which it was found would render it a "drug on the market," are now fairly dispelled, and petroleum has become the third most universal necessity of civilization. Even in the present infancy of our knowledge of its applicability, it supplies fully a dozen wants where coal supplies one; and though it should be found far more plentiful than our most sanguine expectations now look for, unless some other substance is discovered to supply its place to a great extent, it must still continue to be a source of profit to its producers, subject only to the casual fluctuations common to all great commercial products.

ANOTHER MINING SWINDLE.

The Gold Hill *News* has seen an elaborately prepared pamphlet, of twenty-five pages, signed by John Perry Curry, C. E, which has been got up to sell a lot of wildcat stock in the Eastern cities. The copy in question was sent from Boston, by a gentleman who thought of investing, to a friend in Virginia City, asking his advice. The Virginia gentleman immediately telegraphed to his correspondent that the whole thing was a swindle, a fact which was patent upon its very face to any one acquainted with the Comstock lode. A diagram of that celebrated lode was given, with some of the leading mines therein, correctly laid down, and between which was ingeniously sandwiched a number of wildcat mines, which have no existence whatever. The swindle consists in attempting to palm off these pretended claims by representing them as located adjoining to well known and paying claims. How long will the Eastern public allow itself to be gulled by such errant swindlers? Just as long, we opine, as they insist upon investing in California mines, without taking California papers, from which they can obtain valuable and reliable information. We have plenty of valuable mines—some that are paying dividends, and therefore command a high price; others that are but partially developed, but recently located, and which can be bought at a low figure, the buyer taking his chances in the speculation of development. Capitalists at the East are invited to invest in these mines; but they are constantly warned by the papers published on this coast to make their purchases through honest and well established agencies or individuals. Our advice to friends at the East is, never to invest a dollar in a mine on the Pacific coast through any traveling vender of mining stocks. Such men are nearly all engaged in swindling operations.

WEALTH OF SAN FRANCISCO.—San Francisco will this year pay half the taxes of the State. The taxable property of this city for the present year will reach fully $90,000,000, while that of the State will not go much, if any, over $180,000,000.

BOSTON has 1050 manufacturing establishments; the amount of capital invested is $14,527,880, cost of raw material $20 354,277, males employed 14,004, females 4990, annual cost of labor $6.948,229, annual value of products $37,681,808.

Illegal Advertising.

PUBLISHERS OF THE PRESS:—I have at different times noticed your remarks about illegal advertisements of stock companies and think you do the public a favor. I know that you are not responsible for *illegal assessments*, but you might confer a favor, when such is offered to you for publication, by calling the attention of the secretary to the defect. As I understand the Law of April 4, 1864, you will find quite a number of such in your last issue, commencing with the Halleck G. & S. M. Co., on page 29; assessment levied July 5th, 1865, to be delinquent August 12th, 1865; that is thirty-eight days. See Sec. 4 of the Law.

MINER.

REMARKS.—We are much obliged to "Miner" for the interest he manifests for legal advertising of assessments. The informal proceedings now transpiring in this city in levying and collecting assessments illegally, are quite liable to result in serious difficulty; in fact immense litigation must ensue for offenses already committed, unless bills of relief are passed by future legislatures, or most of the principal stock sold fails to be of any considerable value.

That we publish illegal advertisements in our paper is very true. We inform our patrons of any and all informalities which are to be detected by carefully reading the notices for insertion, and, when errors are discovered, advise secretaries of the best method, in our judgment, of amending their transactions; but leave them to do as they choose in regard to following our recommendations. By this manner we are satisfied of having saved many companies from serious if not fatal difficulties. In some instances, however, our opinion has been kindly received, though disregarded; but as our advice is gratuitous, no damage is done our tendered opinion, even in such cases.

In reference to the assessment of the Halleck G. & S. M. Co., "Miner" is quite mistaken in supposing the advertisement is illegal in its form. He will please read the law still further, and observe the following provision:

SEC. 14. No assessment duly levied shall be rendered invalid by a failure to make proper publication of the notices herein before provided for, nor by the non-performance of any act required to be performed in order to enforce the payment of the same; but in case of any substantial error or omission in the course of proceedings for collection, all previous proceedings, except the levying of the assessment, shall be void, and publication shall be begun anew.

The assessment of the Halleck was levied on the 5th of July, too late for the Secretary to advertise the notice on the 9th, (the following Saturday,) in the paper published at the mine in Alpine county, consequently on "omission" was unavoidable, and by publishing the notice on the subsequent four weeks the Secretary adopts the only resource left, and virtually "begins publication anew," as positively provided for in the law. The section as quoted above makes no distinction in regard to the character of the "error or omission," providing only, that it shall be a substantial one. But for this clause we consider that it would be impossible for a large number of companies, whose mines are located at great distance, to operate at all under its outrageous provisions.

We wish it to be thoroughly known that we did our best to defeat so obnoxious a law, and ours was the only press which showed it up in its true character previous to its passage. It is sufficient for us to say that it is a *significant fact* that, as originally introduced, the bill provided that all assessment notices should appear ONCE A WEEK, on Saturday, in a DAILY newspaper. You *must* advertise *weekly*, on Saturday, but you *must not* patronize a *weekly* journal issued on Saturday, was evidently the stupid if not "disinterested" idea of the author. Understand, it is cheaper to issue supplements once a week, than daily, in *accommodating* mining companies with illegal advertising at freezing rates.

COST OF STARTING A NEWSPAPER.—Late Assistant Secretary-of-War Dana has gone to Chicago to start a newspaper—the *Republican*. The new paper starts with a capital of $200,000. Mr. Dana, who will be its chief editor, is one of the most brilliant and astute political writers in the Union; he is to receive a salary of $10,000 a year.

REVOLUTION IN MINING.

Under the abovs head, the New York *Tribune*, of June 12th, devotes a leading article, of a column and a half in length, to a new process of reducing gold and silver ore, purporting to have been discovered by Dr. J. C. Ayer, the well known compounder of patent medicines. The article was evidently prepared on the facts furnished in detail by Dr. Ayer himself. The discovery purports to be a process of liquifying, or rather *softening* the quartz and desulphurizing the sulphurets in such a thorough manner as to effect a perfect liberation of all the gold or silver contained in either the quartz or sulphurets. This article, or its substance, is now being generally copied into the California press. The statement, with regard to the process as given in the *Tribune*, was evidently written by one entirely unacquainted with the ordinary mechanical process of milling, or even the process necessarily dependent upon the pretended discovery in question. If Dr. Ayer has really made any valuable discovery, he has been singularly unfortunate in his effort to bring it to the notice of the mining public. Absurdity is the only thing apparent to the intelligent reader of the article in the *Tribune*.

It was with the utmost astonishment that we found connected with the so-called "process," as approving of the same, such distinguished names as those of Dr. Hayes, State Assayer and Mineralogist of Massachusetts, Professor Silliman, of Yale College, and Professor Torrey, United States Assayer of New York. Mr. Torrey being in this city at the present time, we have taken the pains to ascertain whether the use of his name has been given for such a purpose, and have learned *that such is not the case;* on the contrary, the Professor is quite indignant at finding it employed in such a connection. We have furthermore learned that this is not the first time that this same Dr. Ayer has made use of similarly distinguished names to palm off his "discoveries" and compounds upon the public. From these facts, and the internal evidence of the article under consideration, we are led to conclude that the names of Dr. Hayes and Professor Silliman are also improperly employed, and that we are in no immediate danger of a "revolution in mining" from this latest "pronunciamento."

A Home Silver Mine.—We have on several occasions alluded to the "Layne Gold and Silver Mine," located at Rock Springs, El Dorado county, about four miles from Folsom, on the Auburn road. A few days since, Mr. John P. Layne, who located this mine, brought to our office a bar of silver made from ore from this mine in 1863. We learn from him that he has been laboring assiduously since that date; but, until lately, with indifferent success. Quite recently the workmen came upon a blue ore, of improved character, at the depth of sixty feet from the surface, from which they are now taking out ore which Mr. Layne considers unquestionably richer than the croppings, which have assayed, by working tests, as high as $191 at the Pacific Metallurgical Works in this city. The ledge is six feet wide between the walls; the best paying streak being eighteen inches wide on the foot or east wall. Samples of the ore can be seen at W. F. Bryant's office, 325 Montgomery street. We like the idea of having silver mines located so near home, and hope to hear further flattering reports from the Layne Company, and will take this occasion to invite them to exhibit their ores at the Mechanics' Fair, in our general collection of minerals.

Large Passenger List.—The steamship Golden City, which left this port for Panama on Tuesday last, took away 794 passengers. Her rates of fare were as follows: First cabin, outside rooms, $225—inside rooms, $200; Second cabin, $190; Stecrage, $80.

To Correspondents.—"A Trip to the Mountains," by A. S. N., next week; Letter from Slate Range, and a communication from Denver, unavoidably postpoued to another week.

COAL IN SANTA BARBARA.

At the rooms of Mr. Roach, philosophical instrument maker, on Washington street, below Sansome, may be seen several sacks of coal from a newly discovered coal basin in Santa Barbara county, some sixty-five or seventy miles up the Salinas Valley from Montcrey. This basin is just over the first ridge to the east of the main valley, and crops out profuss in a little valley of an oval shape, and about four by three and a half miles in superficial extent. There are soms six or seven overlaying veins, representing a geological depth of about three hundred feet. Only two of thess veins have been examined, and these superficially, to the extent of a few feet only in depth. The upper vein opened, and the third in the series, is about seven feet in thickness; the lower one opened, and the last yet discovered in the series, is about five feet in thickness. The coal is a lignite, of about the same quality as that found at Mount Diablo. The lower of the two opened is much superior in quality to the upper, and there is good reason for supposing that when this vein is opened to any considerable depth, it will produce a better coal than any now worked in the Stats. So abundant are the croppings, as our informant (Mr. J. C. Colt) assures us, that fully a thousand men could be at once set to work directly upon the coal. This coal can be traced northwardly fully twenty miles.

Higher up the mountain, but geologically below the coal, are numerous copper indications, which, in several instances, have been explored to some extent, but not sufficiently as to determine with any degree of certainty with regard to the quantity of this mineral. The quality is very superior, much resembling in appearance, and we should suppose in occurrence also, the copper of Mount Diablo. The Burra Burra Copper Mines, and the New Idria Quicksilver Mines, both of which have produced considerable sensation in mining circles in this city, are located near this coal field. Oil indications are also abund nt. The main valley of Salinas, but more particularly the smaller valleys between the mountain ranges, present most desirable fields for agricultural development; the whole opening out into the fine harbor of Montcrey.

Monterey will probably in time become the entrepot for a large population, which must sooner or later be scattered through these valleys and mountains—the mountain people developing and bringing to light the minerals, and the residents of the valleys producing the cereals, vegetables, meats, etc. for the mines. The mountains and mountain valleys abound in wood and water. We are told that a direct railroad connection can easily be made between the upper portion of this valley and the Tulare Valley, which would bring the latter within a few hours travel of Monterey. Should a careful survey prove such to be the fact, the trade of the Tulare must eventually take quite a different turn from that generally looked for; and Monterey, with its fine harbor, will be developed into quite an important port. The immense oil deposits of the Tulare Valley will soon demand an exit to tide water, and, unless indications are altogether deceptive, will themselves fully sustain a line of railroad to some point where direct steam communication can be established with this city. If no insurmountable physical obstacles intervene, the obvious and natural direction for such a route is to Monterey, which is about one hundred and fifty miles distant from the center of the Tulare oil regions. Such a road, if built, would run directly by, if not across, the coal deposits of Santa Barbara county, thereby not only affording an outlet for the oil and agricultural productions of the Tulare Valley, and the important mineral regions just being developed a short distance to the eastward, but in passing through the entire length of the Salinas Valley, and along the flank of the coal and mineral regions of Santa Barbara, would also place that within *three hours* travel of the second best harbor on the Pacific coast. A rich and important field is here presented for the enterprising capitalist—and one which should be carefully and thoroughly explored.

A trust deed, embracing nearly the whole of Sacramento, conveying the Sutter title to William Harvey, of that city, in trust for a son of Mrs. Ruth S. Bruce, of Boston, Mass., was received for record a few days since in Sacramento.

The first printing press in North America was established in the City of Mexico, about the year 1600. The first press in the English Colonies was set up at Cambridge, Massachusetts, in 1629.

ELECTION OF OFFICERS OF MINING COMPANIES AND INCORPORATIONS.

[Below we give the date of recent meetings held in this city and the names of officers chosen or appointed. Every bona fide company is invited to send us the result of their election, to be thus put on record, gratuitously, with any other facts of general interest.]

Arizona Cons. M. Co., Eureka District, Arizona Territory.—May 1st. Trustees: E. F. Bunnell, L. K. Baldwin, Z. B. Heywood, J. J. Schmedes, M. E. Austin. President, Dr. E. F. Bunnell; Secretary, John Q. Adams; Treasurer, John J. Schmedes. Offics No. 6 Mont'y Block.

Bacon M. & M. Co.—June 6th. Trustees: John Nightingale, M. C. Hillyer, Hiram Bacon, Lewis Gerstle, Jacob Greenbaum. President, John Nightingale; Secretary, W. E. Dean; Treasurer, John Simc; Sup't., J. W. Woodruff. Office 706 Mont'y St.

Black Diamond Coal M. Co.—June 14th. Trustees: R. H. Randall, Thos. Hardy, C. A. Eastman. President, C. A. Eastman; Secretary and Treasurer, Frank Barnard; Sup't., Benj. James. Office 110 Jackson St.

Chloride Ledge G. & S. M. Co., Blue Mountain District, Calaveras County, Cal.—Trustees: S. A. Winall, E. H. Gadsby, S. Silverberg. President, S. A. Winall; Secretary and Treasurer, R. H. Smith. Office 606 Mont'y St.

Crown Point G. & S. M. Co.—June 5th. Trustees: A. H. Barker, G. T. Grimes, M. Morgantbau, B. F. Sherwood, Isaac Glazier. President, A. H. Barker; Secretary and Treasurer, J. H. Jones; Sup't., T. G. Taylor. Office 708 Mont'y St.

Emilia M. Co.—June 21st. Trustees: C. Ringel, J. Caire, P. Seuer, J. Kuell, Geo. F. Hofman. President, C. Ringel; Secretary, T. B. Cunningham; Treasurer, J. Caire; Sup't., R. San Martin. Office 55 Montgomery Block.

Golden Rule M. Co.—July 11th. Trustees: John H. Turney, Jas. Thos. Boyd, R. L. Pastcur, D. D. Shattuck, Wm. Bosworth. Secretary, J. B. Russell. Office N. E. corner Mont'y and Merchant Sts.

Green G. & S. M. Co., Gold Hill District, Nev.—June 7th. Trustees: John Henderson, J. W. Shoemaker, Edward Flanagan. President and Treasurer, John Henderson; Secretary, R. H. Smith; Sup't., D. J. Oullahan. Office 606 Mont'y St.

Gobernadora S. M. Co.—June 19th. Trustees: Geo. C. Waller, Thos. Prince, John F. Larrabee, E. R. Hawley, A. N. Humphrey. President, Geo. C. Waller; Secretary, John Q. Adams; Treasurer, Thos. Prince. Office No 6 Mont'y Block.

Gov. Seymour G. & S. M. Co.—July 3d. Trustees: L. C. Dodge, J. A. Drinkhouse, H. F. Cutter, A. J. Baber, D. B. Francis. President, D. B. Francis; Secretary, E. J. Drinkhouse; Sup't., M. O. Hulburd. Office 228 Front St.

Imperial S. M. Co.—June 27th. Trustees: Chas. Hosmer, G. T. Lawton, J. E. de la Montanya, L. W. Coe, Horace Webster, Wm. B. Brown, A. H. Barker. President, L. W. Coe; Vice President, Chas. Hosmer; Secretary, D. A. Jennings; Sup't., P. S. Buckminster. Office 708 Montgomery St.

New Year's Diggings G. & S. M. Co.—June 13th. Trustees: C. L. Lipman, A. Pavillier, B. Lagoarde; President, M. Lebatard; Secretary, A. Kunast; Treasurer, B. Eng Anger; Sup't., Chas. de St. Julien. Office 540 Washington St.

Starlight G. & S. M. Co.—June 21st. Trustees: C. H. Wetherbee, E. L. Montgomery, W. T. Hurtt, T. C. Grant, J. H. Gager. President, C. H. Wetherbee; Secretary, J. H. Gager; Sup't., E. L. Montgomery. Office 734 Mont'y St.

Seaton M. Co., Amador Co.—Incorporated June 13th. Trustees: Geo. Hearst, W. W. Stow, C. H. Bradford, Wm. Thompson, Jr., G. W. Scaton; President, Geo. Hearst; Secretary, Stephen T. King; Treasurer, W. C. Ralston; Sup't., W. H. Hepburn.

Sheba G. & S. M. Co.—June 17th. Trustees: George Hearst, R. G. Brown, Wm. M. Cent, Erwin Davis, A. H. Houston, George Faulkner, J. S. Johnston. President, James S. Johnston; Secretary, S. T. King; Treasurer, Bank of California; Sup't., James G. Rule. Office 712 Mont'y St.

Shoshone S. M. Co.—June 14th. Trustees: Henry Carlton, Jr., Geo. Clifford, J. W. A. Gilmor, S. R. Harris, F. R. Baby. President, Henry Carlton, Jr.; Secretary and Treasurer, M. J. Newmark; Sup't., M. J. Goodfellow. Office 529 Clay St.

Southern Light G. & S. M. Co.—July 3d. Trustees: David Mitchell, J. W. Harker, J. P. Cantin, D. B. Francis, S. K. Nichols. President, S. K. Nichols; Secretary, E. J. Drinkhouse; Sup't., Geo. T. Terry. Office 228 Front St.

Simpson M. & M. Co.—June 5th. Trustees: Geo. H. Ensign, C. W. Rand, Wm. B. Agard, Thos. A. Hughes, Isaac S. Church. President, Geo. H. Ensign; Secretary, T. B. Cunningham; Sup't., J. L. Simpson. Office 55 Mont'y Block.

Yankee Blade G. & S. M. Co.—June 1st. Trustees: S. B. Brinkerhoff, W. E. Greenwell, Warren Holt, H. H. Moore, John A. Cook. President, S. B. Brinkerhoff; Secretary and Treasurer, J. S. Luty. Office 305 Mont'y St.

Gone to the Mines.—Mr. J. R. Murphy, of the Metallurgical Works of Kimball & Murphy, Bryant street, in this city, is now absent on a visit to the mines. He will make a general tour of observation through the transmontane mines, and will spend a considerable time in Reese River. No person has had more general experience in the working of the mineral ores of the Pacific coast as Mr. Murphy. The object of his present trip is to make the acquaintance of persons engaged in mining, and to more thoroughly inform himself, by personal observation, with regard to the peculiar characteristics of the mines of the Eastern slope. We trust his trip may be both profitable and pleasant.

Destructive Conflagration.—The burning of the Pacific Warehouse, in this city, on Tuesday night last, involved a loss of property which it is thought will reach fully $600,000, if not more. The fire is thought to have been caused by spontaneous combustion from benzine. Fifty thousand dollars worth of benzine and petroleum were stored in the basement of the warehouse, where the fire was first noticed. There was an insurance on the goods to the amount of about $400,000, in this city and at the East.

Gun Cotton.—Further experiments of the use of gun cotton in blasting, have been tried within a few days past at the Almance Tunnel, near Virginia City, Nevada. Two holes were drilled, of equal size, and calculated to do equal execution. One was charged with cotton, the other with common blasting powder. The former is said to have had the decided advantage in execution.

Mr. Lincoln's Favorite Poem.—Quite a little discussion took place recently in this city, with regard to the authorship of a certain very fine piece of poetry, which was a great favorite with Mr. Lincoln, Its authorship was claimed for him by the *Flag*, of this city. The Boston *Commonwealth* says it was written by William Knox, a poet of considerable talent in Edinburg, Scotland. It was first published in 1825.

Postponements.—We would again call the attention of Secretaries to a certain point of the mining law, too commonly overlooked, viz: The requirement that all postponements must be added previous to the expiration of the regular publication of assessment or sale notices.

A Hero Indeed.—The telegraph states that Admiral Dupont, lately deceased, has bequeathed $175,000—the total amount of his prize money—for the founding of a National Asylum, at Washington, for the orphans of those soldiers and sailors, who have bravely fallen in defence of their country's liberties. A more fitting monument could not be raised to his memory.

General Rosecrans will arrive in this city by the next or the next subsequent steamer. He visits California under a six months leave of absence, and his chief object of coming here is to look after some mining interests with which he is connected at Reese River.

Pure spirits are sent to New York from Hamburg 66.8 deg. over proof—a condition entitling them to be considered as liquid fire. A wharf laborer recently met his death from sucking at a cask of such spirits supposing it to have been wine. He died in a few hours, and a fellow pilferer was severely burnt internally.

Where are the Jews?—It is said that there are twice as many Jews in the city of New York as in all Palestine. The side of the town below Seventeenth street and east of the Third Avenue is rapidly fillings up with them. They are also becoming almost the exclusive dealers in large branches of trade.

The Nevada Gazette is now published by Wm. H. Sears & Co.

THE PREPARATIONS.—The time for the opening of the Fifth Exhibition of the Mechanics' Institute of this city is rapidly approaching. The exhibition will open in two weeks from Thursday next—the 10th day of August, at 10 o'clock, A. M. In the mean time persons intending to contribute to the same should lose no time in making their preparations. Space will be allotted to the exhibitors who have applied for the same on or before the 2d of August; by which time the picture gallery will be ready for the reception of pictures. The motive power will be provided by two steam engines and a calorie engine. The statue of Lincoln, by Mezzara, will occupy the center of the area beneath the dome. This statue, being placed on a pedestal several feet in hight, will be somewhat larger than life, and will form one of the most appropriate and imposing features of the exhibition. The Old Folks' Kitchen, which has attracted so much attention in late Eastern exhibitions, of similar character, will form a leading feature here. Swain & Brown are remodeling the restaurant and promise to make it a pleasant retreat. No time should be lost by those intending to apply for space to file their applications.

SOCIETY.—The pleasure of society depends more upon females than upon men. Gentlemen expect to be entertained, children are out of the question, and therefore it rests upon women what society shall be. The pleasure of an evening's entertainment is graduated by the capacity of the hostess to interest her visitors in each other, and make them forget that their own identity is to be lost in the efforts to make every one at ease. This is the great secret of true enjoyment. Some ladies will enter a drawing-room or social circle, where every person's neighbor appears like an iceberg, and the whole atmosphere is chilly and constrained, and by their genial nature and well timed playfulness, throw sunshine and warmth all over the the room, till all commingle in that easy and yet dignified cordiality that ever characterizes true gentility.

The Sheba Mine Report.

To the Shareholders of the Sheba Gold and Silver Mining Company.

Your Committee on mine and mill, under instructions to publish their findings, respectfully report that they have passed eighteen days in the discharge of their duty, and that they thoroughly examined the property and investigated the affairs of the company in Star district, Humboldt county, Nevada. We find that Mr. Rule, who has charge of the mine, at a point four hundred feet from the mouth of the tunnel, discovered a pay seam, upon which he has drifted one hundred and fifty feet, it continuing the entire distance This seam, when discovered, was exceedingly narrow, but has gradually widened, and although it yields but a small quantity of ore daily, gives promise of a rich reward in its progress, as any day the chimney—the croppings of which (containing ore) exhibit themselves five hundred feet above, may be struck; and that is the point Mr. Rule has been running for the past three months. This pay lead is well defined by crossings, and is almost vertical, and gives great promise of an abundance of ore of value.

The mine is being developed with the strictest economy, the total expense being about fifteen hundred dollars per month. We find that from 125 to 150 tons of ore, worth $150 per ton, has been excavated, and that as much more is accessable, but of an inferior quality. The ore in the north drift in the regular pay seam above mentioned, is of a rich character. We believe the indications for a well defined lode at that point could not be better, and we would suggest the shareholders to stand by Mr. Rule in pushing that drift forward. The Committee disapprove of starting the mill on the ores excavated until the work progresses to a point entirely independent of the disturbed portion of the mountain, when we can with more certainty determine whether or not the mill can be kept constantly running. This, also, in view of the fact that a large outlay of money will be required to start up the mill, as the mill-workmen must be transported from remote points at a large expense to them. Bell fly, we believe, we have now a good and permanent mine, and that if the shareholders advertised as delinquent would inspect the property, their names would not so appear. We must here state, that the work of forwarding the north drift to the desired point cannot be prosecuted much longer unless the delinquent assessments are at once paid, as large sums are due the workmen for their labor, who have only labored so long and faithfully, as they assert, believing the mine will soon be in successful operation. But if the assessments now advertised as delinquent, are not paid, they will work no longer. They must and should receive some money to enable them to continue to develop the mine.

To the complaints of the large amount of assessments that have been levied, while realizing that fact ourselves, we find that large sums were necessary in the opening of this mine, and believe if the Sheba mine was located near Virginia City much larger sums would have been cheerfully expended in its development, if found necessary. We find the management at the mine excellent, and if the delinquent shareholders will pay up, there would remain eight or nine thousand dollars after the payment of all the indebtedness, and we believe no further assessment would be required to enable Mr. Rule to finish his present work.

We find the mill will require the expenditure of a small sum of money to render it the best mill in the State. A watchman is employed to look after the mill and furnaces and the stores, consisting of mill and mine materials sufficient for over six months. The books and accounts of the officers are well arranged, and, we are satisfied, are in proper hands.

In conclusion, we would state that the present depression of the stock is in no wise owing to the condition of our affairs at Star City. Let those parties who placed an injunction on certain of the stock remove the same, the other stock carrying two or three assessments would be at once free; and with the consequent healthy condition of the finances the merits of the mine would rapidly advance the stock to its proper figure.

Respectfully, GEO. FAULKNER,
A. P. OVERTON, Committee.

SANTA CLARA COLLEGE, S. J.,
SANTA CLARA, CAL.

Conducted by the Fathers of the Society of Jesus.

The FIFTEENTH ANNUAL SESSION of this College will commence on

Monday, August 28th, 1865.

TERMS—Tuition in the Classical and Scientific Department; Boarding and Lodging; Washing and Mending of articles washed; School Stationery; Medical Attendance and Medicine; fuel, light, baths, etc., per session of ten months $350

For further information and catalogues, apply to the President of the College, or to Rev. A. Maraschi, St. Ignatius College, Market street, San Francisco.
3v11 REV. A. MASNATA, S. J., President.

Economy in Advertising.—The MINING AND SCIENTIFIC PRESS is the best and most ECONOMICAL mining advertising medium in this city. Our terms are less than ONE HALF the rates now charged by daily newspapers, and the mining community are beginning to appreciate our reasonable rates of advertising. The PRESS contains, proportionally, a larger amount of mining advertising than any other paper on the Pacific coast. Its character renders it the proper journal for the concentration of mining patronage.

THE MORNING LAND.—How consoling the ought that "After the night cometh the rning." When the hand of bereave- nt is laid heavily upon us, how anx- sly we turn our eyes upward to pierce shadows which intervene between us and fair Morning Land. When the spring bird rbles his sweet song in our ear, we pause look heaven ward, wondering if he bears to some glad tidings of our dear departed, and e has not seen the beauteous land where y have silently gone.

Where is that Morning Land? we some- es ask, when dark shadows obstruct the t which our immortal spirits crave. Where e they gone—the meek eyed ones who were light and joy of our homes? We list in rnful silence for the familiar footfall that r pleasantly greeted our ears, and, half for- ting, extend our arms to clasp anew the rished form. Blessed are they who live so r the angel-world that they can hear its sful echoes. Happy are they who see in ous the forms of the loved and true, and o can hear spirit voices sweeter than Bee- ven's richest symphonies.

There is such a thing as holding communion n God and the blessed ones who have c through the golden gates which have elessly closed upon them as they entered Morning Land. They are there, while we left to struggle a little longer—left to sm l w more times, as sunbeams illumine our quered pathway—left to weep over the es- gements of those we have loved, and lelt ealize that benificent joy which comes from veet assurance that they who dwell in the rning Land love us still.

ACTION OF PETROLEUM ON THE HUMAN SYS- .—Landerer relates the case of a man who llowed a quantity of petroleum; the greater he vomited again. It caused a strong ning sensation in the tongue and throat, ch were reddened and became swollen. stomach and bowels also became affected, slight gastro-enteritis ensued. For sev- days the urine and sweat smelt strongly of oils, and the odor was specially strong er the arm-pits. The patient was very k for a time, but recovered.—*Chem. Cen- Blatt.*

WHILE strawberries are in bloom is the time xamine the beds and eject such as are val- ess. Those which are termed male plants, staminate, do not usually produce any or very little fruit, and their number should be over one in ten to fifteen of female nts.

THE PACIFIC IRON WORKS,

First & Fremont Sts., between Mission & Howard, San Francisco.

The proprietors of the above Works invite the attention of all parties interested to their greatly improved and unequaled facilities for manufacturing Steam Engines and Boilers, both Marine and Stationary, of any required size and pattern, Quartz Mills, Amalgamating, Pumping and Hoisting machinery of the most approved construction, Flour, Saw and Sugar Mills, Water Wheels, &c., &c. Our pattern list is most complete and extensive, embracing the late improvements in all classes of machinery adapted to use on this coast. We would call especial attention to the fact that we have secured the exclusive right of manufacture for the Pacific Coast of the celebrated Creeno Engine, conceded to be the most economical and perfect working Engine now in use. We are also exclusive manufacturers of the celebrated

Bryan Battery, Varney's Amalgamators and Separators, Ryerson's Superheated Steam Amalgamators and Rotary Crushers, Stone Breakers, &c. Orders respectfully solicited.

☞ Particular attention given to casting Rudder Braces and Ship Work in general.

☞ All Jobs promptly attended to. Prices moderate.—☜ No. 129 First street, opposite Minna, next door to Pacific Foundry. 2tf

Removed from Oregon street, between Front and Davis.]

Vulcan Iron Works Company

[ESTABLISHED 1850.]

First, Natoma and Fremont Streets.

IRON FOUNDERS,

Steam Engine and Locomotive

BUILDERS,

Boiler Makers, and Workers in Sheet Iron, Brass and Copper.

These Works have lately been increased by the addition of new shops on Fremont Street, doubling the capacity of the original establishment. Their facilities for turning out machinery promptly and efficiently, are now unequaled in the State. Their Boiler Works have also been enlarged correspondingly.

The Company are prepared to execute orders for all classes of Machinery and Boiler Work, such as

Mining, Steamship, and Steamboat Machinery,

Railroad Machinery, Locomotives, Car Trucks, Car Wheels, Housings and Irons; and Flouring Mills, Quartz Mills, Sugar Mills, Saw Mills,

Manufacturing Machinery of Every Kind.

Sole Manufacturers of

HEPBURN & PETERSON'S REDUCING PAN AND AMALGAMATOR

BETH'S AMALGAMATOR;

HE ORIGIN OF THE WEEPING WILLOW.—
Arabian legend of the origin of the weep-
willow is curious, but contains, like most
litions, an anachronism, if we accept the
ows of Babylon as the weeping willow, but
Arabians are much better *racontcurs* than
anists; so it will not do to apply too severe
ientific test to their accuracy. The legend
s that after David had married Bathsheba,
was one day playing on his harp in his pri-
e chamber, when he found two strangers
osite to him, although he had given strict
ers that no one should intrude upon his pri-
y. These strangers were angels who con-
ted him of his crime in nearly the same
nner as is related in holy writ. David then
ognized in the strangers the angels of the
d, and was sensible of the heinousness of
offence. Forthwith he threw himself on
floor and shed tears of bitter repentance;
re he lay upon his face for forty days and
y nights, weeping and trembling before the
gment of the Lord. As many tears of re-
tance as the whole human race have shed
will shed on account of their sins from the
e of David till the judgment day, so many
David weep in those forty days, all the
e moaning forth penitential psalms. The
s from his eyes formed two streams which
from the closet into the ante-room and
nce into the garden. Where they sank
the ground, there sprang up two trees, the
ping willow and the frankincense tree: the
weeps and moans, and the second incess-
ly sheds big tears in memory of the sincere
entance of David.

THE

WHEELER & RANDALL
Grinder and Amalgamator.

In the engraving herewith exhibited, A represents the Rim of the Pan; B, Cross Frame; C, Legs; D, Gear; G, Driving Pulley; H, Muller; I, Driver; K, Dies; L, Shoes; M, Hand Wheel; N, Jam Nut, and O, Wings or Guide Plates.

The attention of the Public is respectfully called to these facts:

1st. That the Mechanical work accomplished by differently formed grinding plates, having the same diameter, weight, hardness, and revolving at the same velocity, is as follows, to wit:

The Mechanical Work of plane, circular plates of the usual ring form, is ninety-eight.....98

The Mechanical work of conical plates of the most approved form, is one hundred and ten.....110

The Mechanical work of Tractory-formed plates, as introduced in the invention of Wheeler & Randall, is one hundred and seventy-seven.....177

That is, the Tractory-formed grinding plates will reduce one hundred and seventy-seven tons of ore, the conical grinding plates one hundred and ten tons, and the plane circular grinding plates ninety-eight tons, to the same degree of fineness in the same time. Those using this invention certify that they thoroughly reduce five tons of ore, as it ordinarily comes from the wet battery, per day in each pan, four feet diameter, the muller making sixty-five revolutions per minute.

2d. That as a whole, the Wheeler & Randall Grinder and Amalgamator is one of the most simple, compact, substantial, convenient and efficient pans in use.

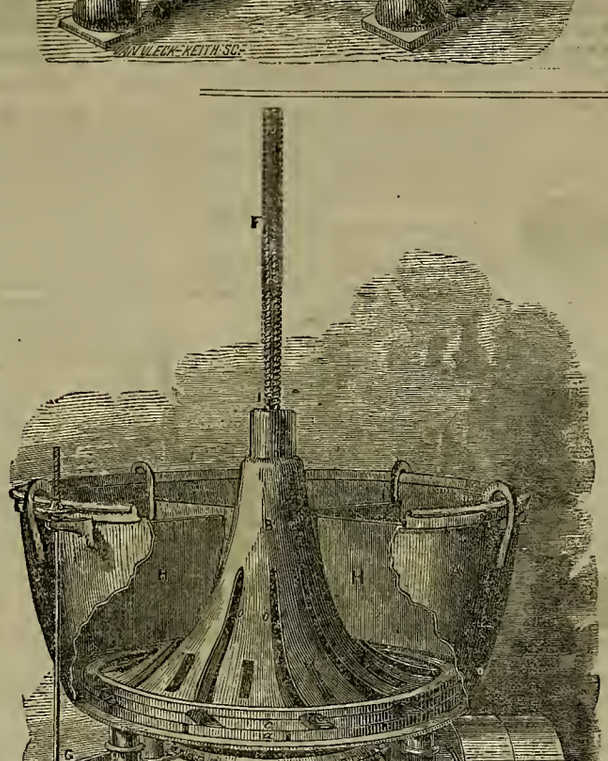
☞ Patent applied for.

MANUFACTURED AT

GOLDEN STATE IRON WORKS.....San Francisco.
UNION IRON WORKS..... "
MINERS' FOUNDRY..... "
SAN FRANCISCO FOUNDRY..... "
PRESCOTT & SCHEIDEL.....Marysville.
OREGON IRON WORKS.....Portland, Oregon.

WHEELER & RANDALL, Inventors.

SAN FRANCISCO, JUNE 13, 1865.



THE EXCELSIOR
GRINDER AND AMALGAMATOR.

In the engraving herewith presented, A represents the Rim of the Pan; B, Muller; C, Legs; D, Cross-Frame; E, Gearing; F, Screw G, Lever; H, Dash-Boards; I, Key; *a*, Dies; *c*, Shoes, and *o*, Openings.

The relative grinding capacities of "The Excelsior" Grinder and Amalgamator, of the Flat Bottomed Pan, and of the Conical Pan *when properly constructed*, are respectively 177, 98 and 110.

That is, the respective mullers being of the same diameter, same weight, same hardness, and running at the same velocity, "The Excelsior Grinder and Amalgamator" will reduce one hundred and seventy-seven tons of ore, the Flat Bottomed Pan ninety-eight tons, and the Conical Pan one hundred and ten tons to the same degree of fineness in the same time.

The wear to the Shoes and Dies at their grinding surfaces in the Excelsior Grinder and Amalgamator, is perfectly uniform, thus securing evenness of reduction to the pulp, as well as steadiness of motion to the muller. Uniform wear of the grinding plates has been attained in no other than that of the Tractory form—nor can it be.

Another property of excellence in this machine is that the metal or substance to be amalgamated passes *direct* from the grinding surfaces into the quicksilver; thus excluding the possibility of its becoming coated with any foreign substances, after having been furnished. It is truthfully said "that the Tractory-formed Pan as a Grinder has no equal, and as an Amalgamator no superior."

As a whole, it is far superior to any other pan in use.

MANUFACTURED AT THE

Union Iron Works and Golden State Iron Works,

WHEELER & RANDALL, Inventors.

The undersigned having had several years of experience in practical quartz mining operations, will ever take great pleasure in furnishing parties interested in mining and machinery any desired information which they may possess.

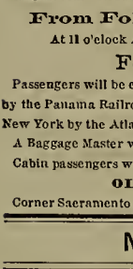
ATTENTION, MINERS!

LINSCOTT'S PATENT CHAMBER DRILL.

Great Improving in Blasting.

W. B. LAKE

Has taken the sole agency for the manufacture and sale upon the Pacific Coast of this valuable article, the object of which is to cut a chamber at the bottom of an ordinary drill-hole (as will be understood on reference to explanation of cut), giving more than double the effect in blasting.



D is the shaft of drill, forty-five inches in length. B represents the cutters extended after a blow has been given. The lower portion of B is a guide plate ⅜ inch thick, holding the cutters in place and allowing them to slide in and out freely, the surface of the rock preventing their falling out and securing their return. When closed the edges of the cutters protrude about 1.16 inch only. As the drill descends the force slide A strikes the bottom of the hole and a slight blow drives its wedged shaped head, C, upward, forcing the cutters upward and outward by double acting wedge power. Face of the cutters 1¾ inches in length, diamond edged. There are but four pieces in all, two of which, the cutters, are detached.

Price of one drill with two sets of cutters, $35. Extra cutters, $5 per set.

Persons wishing further information about the working of this labor and money saving article, will please send for circulars containing full particulars, which will be furnished gratuitously upon addressing W. B. LAKE, General Purchasing and Advertising Agent, Room 28 Government House, San Francisco. 2v11

HANSCOM'S CRUSHERS,

Made in sizes suitable for Breaking Quartz for Batteries; Rock for macadamizing or concrete; Copper Ore for sacking, sampling, or concentrating; also, for crushing Quartz for Arastras and Grinders. The small sizes make a most efficient Crusher for Prospectors, and are arranged to be run by Hand, Horse, Water, or Steam Power. For further information address W. W. HANSCOM.

1 Golden State Iron Works, San Francisco.

THE HAMMER QUARTZ MILL.

[PATENT APPLIED FOR.]

This Machine is now complete and ready for sale. In constructing it, our aim has been to produce a light, cheap and economical Crusher—one adapted to mining on a small as well as on a large scale.

The elementary principle on which it operates is that of the stamp—the only one really reliable and economical.

But the stamp has many serious disadvantages, among which are its great weight and small velocity; the great power required to run it; difficulty in feeding properly; imperfect discharge, and the necessity of crushing wet, or the annoyance from dust in crushing dry.

All these difficulties are obviated in our machine, and the percussive blow of the stamp retained, with the further advantage of its being a drawing or grinding one.

We give to our hammers such absolute or relative weight and velocity as we choose—just such as to effect their purpose and no more—thus securing the qualities of the natural hammer blow.

The feed is self-adjusting and uniform, and as fast as the ore reaches the required degree of fineness (which depends upon the fineness of the screen or sieve used), it is instantly discharged, so that there is no packing of the ore under the hammers.

The mill crushes dry, with no more dust than that incident to feeding, which is trifling.

As the only support of the mortar is a single post set into the ground, the machine can be put in place at slight expense.

The size now being built weighs about 1,800 pounds complete; the heaviest piece not weighing over 275 pounds. It is driven by half a horse-power, and crushes from three to ten tons per day of twenty-four hours per day, according to the character of the rock and the fineness to which it is reduced.

PRICE,.....$800.

Larger ones will be furnished if desired.

We invite an inspection of the Mill now in operation adjoining the Foundry of DEVOE, DINSMORE & CO., on Fremont street, between Market and Mission, San Francisco.

Office, No. 11 Court Block, San Francisco, Cal.

21v10 **RIX & LOGAN.**

ATWOOD'S Self-Regulating Windmill.

This Windmill is the most perfect self-regulator yet invented, and is capable of being adjusted to any desired speed. Manufactured at

222 Mission Street, North side, below Beale,
SAN FRANCISCO.

N. B.—We also manufacture DICKERSON'S SELF-REGULATING MILLS; also, Rotary and Stationary Mills of different styles and prices, varying from $50 to $500 each; also round and square Water Tanks made to order.

222 Mission street, below Beale. 5

HUNT'S IMPROVED WIND-MILL.

THIS WIND-MILL IS RAPIDLY taking the place of all other Mills on the Pacific Coast. These Mills are so simple in their construction, that when once built, they can be put in order by almost any person; and when once in order they will run for years without repairs.

Prices, from $50 to $1,000.

ROUND AND SQUARE WATER TANKS BUILT TO ORDER.

HUNT'S PUMPS

Are admitted to be the best in the Market for Wind Mills, being built expressly for that purpose. They can be set, and taken apart with a common wrench, and are very easily repaired.

HUNT'S ENDLESS CHAIN

HORSE POWER

For Sawing Wood.

ALSO, THE

Self-Regulating Horse Power

Is so arranged as to give a steady motion, and is calculated to be used for turning Wood, Iron or Brass, also for Scroll or Circular Sawing, and is fully equal to Steam for any light work. The above Machines are built of the best materials, and made as Durable as Wood and Iron will make them.

ALL WORK WARRANTED.

☞ For further Particulars see small circulars. ☜

E. O. HUNT,

No. 28 Second Street, and 108 & 112 Jessie Street, San Francisco. 26-3m

HUNT'S PATENT Circular Sweep Horse-Powers,

For running Churns, Washing Machines, Grindstones, pumping water, sawing wood, and other light machinery. Price, $100, at the Factory.

HUNT'S PATENT SELF REGULATING TREAD HORSE-POWER is superior to any machine of the kind in the market. Price, with Governor, all complete to set to work, at the Factory, $300. Manufactured by

E. O. HUNT,

7v10 28 Second street, San Francisco.

SALMON'S PROPELLER AMALGAMATOR.

The proprietors and inventors of this machine, after fourteen years of practical experience in mining in California and Nevada Territory, and having a thorough knowledge of the wants of Miners and Mill men, have succeeded in making an Amalgamator, which, for the purposes intended, far surpasses any other yet presented to the public, and which can be furnished at less than one-half of the expense of any other Amalgamator, now in use, besides requiring less labor to clean and keep it in running order. The Amalgamator is simple in its construction, consisting of a pan or tub constructed of wood and adapted to either a Stone or Iron bottom. Opposite each other, and on the inside of the tub, are two flanges, from two to four inches broad, reaching from the top to near the bottom, with room for the mullers to pass under. These flanges are for the purpose of preventing the pulp from forming a circular current, and together with a number of wings placed like a screw propeller on the muller-shaft, force a current continually on the quicksilver at the bottom and under the grinding surface of the mullers. This peculiarity of propeller screw and side wings, in combination with a deep tub, are what the proprietors claim as new and for which a patent has been applied for. The undersigned are now manufacturing three different sizes of this machine, and the attention of the public is respectfully called to the following results obtained from the working of Reese River rock, by this amalgamator, and assayed by Miller & Limbaum, at Austin, Nevada:

No.	Fine	No.	Fine
Assay.....250	948	Assay 300	990
Assay.....85	941	Assay for Chatman	980
Assay.....286	940	Assay Water Rock	966
Assay.....191	950	Assay Water Rock	998
Assay.....	St. Helena Ledge, W. D.		966

These, including a hundred other batches, were all worked to within fifteen per cent., and some to within ten per cent., of the assay. Parties interested will find it to their advantage to call and see the above machine in operation.

Manufactured at the San Francisco Foundry, San Francisco, California, by

J. & W. C. SALMON,

To whom all orders should be addressed. 15

TO QUARTZ MINERS.

Hinkle's Centrifugal Pulverizer and Amalgamator!

THE ATTENTION OF MINERS IS RESPECTFULLY requested to HINKLE'S CENTRIFUGAL PULVERIZER AND AMALGAMATOR, now manufactured and to be seen in operation at the NOVELTY IRON WORKS of Mr. E. T. Steen, Nos. 37 & 39 Fremont street, between Market and Mission streets.

This machine is the best in the State for the purpose of Pulverizing and Amalgamating ORES. The whole machine, made entirely of Iron, will not exceed One Ton, and no piece of it will exceed 200 pounds, which makes it very convenient for transportation to remote districts. It will work Two Tons of Rock per day.

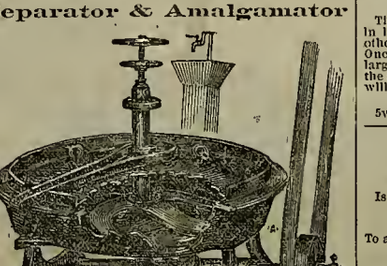
Mr. Hanson, who is running one of the machines, is an experienced Amalgamator, and will receive Ores at the above named place, and extract the metals and furnish assays for all persons wishing the same. The Subscriber manufactures a HAND MACHINE for Miners engaged in prospecting, which will work 60 pounds of ROCK at a time, and which will weigh about 175 pounds.

The Pulverizer and Amalgamator works Rock of the size of a grain of corn to an impalpable powder. Apply to

PHILIP HINKLE,

At the Novelty Iron Works, Nos. 37 & 39 Fremont street. 15-1m

BAUX & GUIOD'S Separator & Amalgamator



Is the most important improvement in mining machinery ever introduced. It was awarded the FIRST PREMIUM at the San Francisco Mechanics' Fair for 1864, where it proved itself to be the best Separator and Amalgamator among all the competitors. Constructed on principles which combine Scientific Knowledge with Practical Experience, these Pans extract more gold and silver from their ores than any others in use, as a few hours trial will demonstrate. Mill men will find it to their advantage to employ these pans as Separators, in addition to the ordinary Amalgamators now in use, and to re-work their old tailings.

The cost of these pans is inconsiderable, and their structure is such that they can be readily separated in parts convenient for packing on mules. Among the many advantages possessed by BAUX & GUIOD'S Pan, are the following: The trifling cost for attendance; its small cost; its portability; The large quantity of pulp it can operate upon in a given time; it may be worked even weeks without stopping, as it is constructed to work continuously; The complete thoroughness of the separation of the rock from the metals and the trifling power required to work them; They can be attached to any ordinary crushing apparatus.

Lapidaries' refuse, Refiners' ashes, Jewelers' sweepings, purchased or worked for a percentage. Ores and tailings worked or assayed at reasonable rates.

Manufactured at the Vulcan Iron Works, Miners' Foundry and San Francisco Foundry, San Francisco, and at Hough & Thom's Foundry, Nevada City.

For further particulars, or to see this Pan in operation, call on or address

J. B. BAUX,

Fremont Street, near Mission, adjoining the San Francisco Iron Works, San Francisco. 4v8

FARRAND'S Oscillating Amalgamator,

RECEIVED THE

ONLY PREMIUM

AWARDED FOR AMALGAMATORS

At the Recent Industrial Fair

OF THE

Mechanics' Institute of San Francisco.

Committees of Awards.

O. BELDEN, W. T. GARRATT, H. P. WAKELEE,
O. GORI, OKO. JOHNSON, C. M. RADCLIFF.

This Premium Amalgamator was placed on trial, at the Mechanics' Pavilion, with the Varney, Wheeler & Randall, and Hepburn & Peterson Pan, each working eight hundred pounds of crushed rock.

This Unrivaled Amalgamator possesses many advantages over all others now in use.

1st. It is capable of doing double the amount of work of the ordinary Pans, at a saving of more than one-half of the power.

2d. It reduces the pulp finer, thereby producing a better result.

3d. It requires less quicksilver by one-half at a charge, whilst the loss by trituration is comparatively nothing.

4th. As an Amalgamator of gold contained in sulphurets as also for very fine or flour gold, it has no equal.

5th. This Amalgamator involves no complicated machinery, and is less liable to get out of order than any of the pans.

Manufactured at the MINERS' FOUNDRY.

W. D. FARRAND, Inventor,

R. L. OGDEN, Agent, SAN FRANCISCO.

S. E. corner Montgomery and California streets.

19v9

NOTICE TO MINERS.

NEW QUARTZ MILL.

THE ATTENTION OF ALL ENGAGED IN MINING IS called to Fauchery's unrivaled Mining Machines, consisting of his celebrated Turbine Water Wheel, which took the First Premium at the Mechanics' Fair at San Francisco for 1864; his Crocodile Quartz Crusher; his Pulverizer; and his Improved Freiberg Amalgamating Barrel; altogether forming the most complete and effective Quartz Reducing and Amalgamating Mill now in use. This mill can be put up at less cost, run with less power, and accomplish more work, than any other now in use.

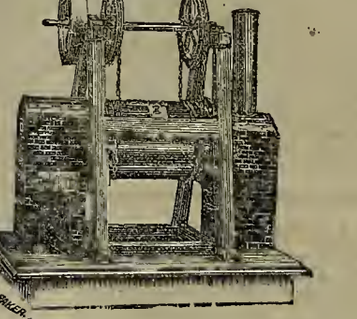
B. Fauchery and F. Genard

Having established a Quartz Mill and Metallurgical Works, are now prepared to crush, roast, amalgamate, assort, cupelate, and give correct analysis of ores. We are also prepared to give our attention to the building and constructing of Quartz Mills and Furnaces, and give directions for working Mines; and also to instruct persons in all branches appertaining to Mining Works, at No. 23 Fremont street, near Market, Railroad Foundry building.

F. GENARD, **B. FAUCHERY,**
Metallurgist. **Engineer,**

24v9

WM. BRUCKNER'S Furnace for Roasting Ores.



Now in Operation at 416 Market street.

This Furnace, which is portable, and can be carried on muleback, undertakes to roast without employing any labor whatever for the operation of stirring, which is accomplished by machinery that may be driven by steam or any other motor. It consists of an iron cylinder, which, being suspended by chains, in rotating mixes and stirs the ore, by an internal apparatus, quicker and more perfectly than can be done in any other furnace hitherto known in metallurgy. It can be applied to any kind of ore, and the rapidity and perfectedness of its operation, the great saving in fuel, and the entire saving of the labor usually required for stirring the ore, together with the small cost of constructing it, renders this furnace a most

Economical and Practical Invention.

The Furnace may be had of two sizes—one being nine feet in length and holding fourteen hundred pounds, and the other six feet in length, and holding eight hundred pounds. One horse power is required to drive the machinery of the larger sized furnace, and three-fourths of a horse-power for the smaller size. Parties wishing to erect such furnaces will please communicate to

W. BRUCKNER,

5v10 No. 416 Market street, San Francisco.

BLAKE'S QUARTZ BREAKER

Is now extensively used for breaking hard masses of

Quartz or Ores

To a size suitable for stamps. These machines are patented, and are in practical operation in

CALIFORNIA, AUSTRALIA,
WASHOE,
ENGLAND, FRANCE,
AND
THE ATLANTIC STATES.

These Machines, or circulars containing further information regarding them, may be obtained of the undersigned.

Address,

BLAKE & TYLER,

Box 2077 San Francisco Post Office.

CHAS. T. BLAKE, Idaho City. E. TYLER, Michigan Bluff. WM. P. BLAKE, San Francisco.

4v10

VARNEY'S PATENT AMALGAMATOR.

These Machines Stand Unrivaled.

For rapidly pulverizing and amalgamating ores, they have no equal. No effort has been, or will be, spared to have them constructed in the most perfect manner, and of the great number now in operation, not one has ever required repairs. The constant and increasing demand for them is sufficient evidence of their merits.

They are constructed so as to apply steam directly into the pulp, or with steam bottoms, as desired.

This Amalgamator Operates as Follows:

The pan being filled, the motion of the muller forces the pulp to the center, where it is drawn down through the aperture and between the grinding surfaces. Thence it is thrown to the periphery into the quicksilver. The curved plates again draw it to the center, where it passes down, and to the circumference as before. Thus it is constantly passing in a regular flow between the grinding surfaces and into the quicksilver, until the ore is reduced to an impalpable powder, and the metal amalgamated.

Setters made on the same principle excel all others.—They bring the pulp so constantly and perfectly in contact with quicksilver, that the particles are rapidly and completely absorbed.

Mill men are invited to examine these pans and setters for themselves, at the **PACIFIC FOUNDRY,**

1v10 San Francisco.

Hepburn & Peterson's AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

☞ This Amalgamator may be seen in operation at the European Metallurgical Works, Bryant St. bet. 3d and 4th.

Our Patent Agency.

The PATENT AGENCY of the MINING AND SCIENTIFIC PRESS has been signalized with remarkable success during the past two years. The importance to the inventive genius of this coast of a thorough and reliable agency for the solicitation of LETTERS PATENT from the United States and foreign Governments cannot be over-rated, and the Proprietors of the PRESS, feeling the responsibility which rests upon them, and the reward which must follow the faithful performance of their trusts, will take care to afford inventors every advantage to be secured to them through a competent and responsible agency upon this coast.

Our Advertising Circular Will be furnished free on application to this office. Its contents are as follows.
Corporation Assessment Law of California.
Economy in Mining Advertising.
Table for Advertising Assessments on Saturdays.
Calendar for 1865-1866.
Information about Obtaining Patents.
Table of Distances on the Pacific Coast.

Our Circulation.—THE MINING AND SCIENTIFIC PRESS has a large and permanent subscription list, and enjoys a more universal circulation among stockholders and persons directly interested in mining than any other paper on this coast.

New Mining Advertisements.

Continued Mining Advertisements will be found on other pages.

Camargo (Eclipse) Gold and Silver Mining Company, Reese River Mining District, Lander Co., Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 17th day of July, 1865, an assessment of five ($5) dollars per share, in United States Legal Tender Notes, was levied upon the capital stock of said Company, payable at once, to the Secretary, at his office, or to W. B. C. HARKER, Superintendent, at Austin, Nevada.

Any stock upon which said assessment shall remain unpaid on the 19th day of August, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on the 6th day of September, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of sale.

WM. T. REYNOLDS, Secretary.
Office, 423 Front street, San Francisco. jy22

El Dorado Gold and Silver Mining Company, Silver Mountain District, Alpine county, Cal.

And in accordance with law and an order of the Board of Trustees, made on the 5th day of June, 1865, so many shares of each parcel of said stock as may be necessary will be sold, at public auction, at the office of Edwards, Olney & Co., No. 526 Montgomery street, San Francisco, Cal., on the 7th day of August, 1865, at the hour of 2 o'clock P. M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

J. WARREN CLARK, Secretary.
Office, 410 Montgomery street, San Francisco. jy22

Delays are Dangerous.—Inventors on the Pacific Coast should bear in mind that by patronizing our Patent Agency they can sign all necessary papers for securing patents almost immediately, thereby avoiding the three month's delay requisite in transacting business through Eastern agencies.

Dividend Notice—Golden Rule Mining Company.—At a meeting of the Board of Trustees of the Golden Rule Mining Company, held this day, a dividend was declared, payable on the twentieth inst., at the office of the company, No. 622 Montgomery street.

jy22 J. B. RUSSELL, Secretary.

Office of the Globe Gold and Silver Mining Company, San Francisco.—Location: Monitor Mining District, Alpine county, California.

NOTICE.—There will be an Annual Meeting of the stockholders of the Globe Gold and Silver Mining Company, at the office of said Company, 410 Montgomery street, in the city and county of San Francisco, on the 21st day of August, 1865, at 2 o'clock P. M., for the purpose of electing Trustees and for the transaction of such other business as may be brought before the stockholders.

I. EVI MILLER, President.
WM. HA NAH,
jy22-4w J. S. POWERS, } Trustees.

Honest Miner Gold and Silver Mining Company, Reese River Mining District, Lander Co., Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 18th day of July, 1865, an assessment (No. 5) of fifty cents per share was levied on the 22d day of July, 1865, upon the capital stock of said Company, payable immediately, in gold coin of the United States, to the Secretary, at his office, No. 228 Front street, San Francisco, Cal.

Any stock upon which said assessment shall remain unpaid on Saturday, the 26th day of August, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on the 12th day of September, 1865, at 3 o'clock P. M., to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

J. A. DRINKHOUSE, Secretary.
Office, 228 Front street, San Francisco, Cal. jy2

Jewett Gold and Silver Mining Company.—Location of Works, at Gold Hill, Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 19th day of July, 1865, an assessment of one dollar per share was levied upon the assessable capital stock of said Company, payable on the 22d day of July, 1865, in United States gold coin, to the Secretary, at the office of the Company, 509 Clay street, San Francisco.

Any stock upon which said assessment shall remain unpaid on Saturday, the 19th day of August, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 2d day of September, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

G. M. BURNHAM, Secretary *pro tem.*
Office, 509 Clay street, San Francisco. jy22

Porter Gold and Silver Mining Company, Virginia District, Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 19th day of July, 1865, an assessment of five dollars per share was levied upon the capital stock of said Company, payable immediately, in United States gold and silver coin, to the Secretary, at 534 Clay street, San Francisco.

Any stock upon which said assessment shall remain unpaid on Saturday, the 19th day of August, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 2d day of September, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

C. W. WESTON, Secretary.
Office, 534 Clay street, San Francisco. jy22

Rose Gold Mining Company, Mariposa County, California.

NOTICE.—There are delinquent upon the following described stock, on account of assessment levied on the 6th day of June, 1865, the several amounts set opposite the names of the respective shareholders, as follows:

Names.	No. Certificate.	No. Shares.	Amount.
A Buetell	103	8	$4 00
Chas P Cowles	114	150	75 00

I C Pray	100	10	5 00
I C Pray	144	50	25 00
W E Quinby	141	20	10 00
M S Taylor	131	41	20 50

And in accordance with law, and an order of the Board of Trustees, made on the 6th day of June, 1865, so many shares of each parcel of said stock as may be necessary, will be sold, at public auction, by Edwards, Olney & Co., No. 526 Montgomery street, San Francisco, on the 5th day of August, 1865, at the hour of 12 o'clock M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

C. M. PECK, Secretary.
Office, 336 Montgomery street, San Francisco. jy22

Sheba Gold and Silver Mining Company, Star District, Humboldt county, Nevada.—Office, 712 Montgomery street, San Francisco, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 6th day of May, 1865, an assessment of five dollars, and on March 14th, 1865, an assessment of five dollars, and on November 25th, 1864, an assessment of fifteen dollars per share, was levied upon the capital stock of said Company, payable immediately, in United States gold and silver coin, to the Secretary, at the office of the Company

Any stock upon which said assessments, or either of them, shall remain unpaid on Saturday, the 19th day of August, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 2d day of September, 1865, to pay the delinquent assessments, or either of them, together with costs of advertising and expenses of sale. By order of the Board of Trustees, made on the 17th day of July, 1865.

S. T. KING, Secretary.
Office, 712 Montgomery street, San Francisco.

NOTICE.—The Board of Trustees of the Sheba Gold and Silver Mining Company, having been legally advised that the second postponement of sale of stock delinquent for above assessments, made on July 5th, 1865, was unauthorized by law, have ordered the publication to be begun anew, as above. (jy22) S. T. KING, Secretary.

Postponements and Alterations.—Secretaries are requested to give notice of postponements, or alterations which they may desire made in their advertisements at their earliest convenience. New advertisements should be sent in as early as possible.

Whitlach Yankee Blade Silver Mining Company, Lander county, Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 22d day of July, 1865, an assessment of ten dollars per share was levied upon the capital stock of said company, payable immediately, in United States currency, to the Secretary, 402 Front street (up stairs), San Francisco.

Any stock upon which said assessment shall remain unpaid on Saturday, the 26th day of August, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Tuesday, the 12th day of September, 1865, to pay the delinquent assessment thereon, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

N. C. FASSETT, Secretary.
Office, 402 Front street (up stairs), San Francisco. jy22

Wisconsin Gold and Silver Mining Company, Silver Mountain District, Alpine county, California. ASSESSMENT No. 4.

Notice is hereby given, that at a meeting of the Board of Trustees of said company, held on the 12th day of July, 1865, an assessment of one ($1) dollar per share was levied upon the capital stock of said company, payable immediately, in United States gold and silver coin, to the Secretary, at the office of the company, or to R. H. FORD, at Silver Mountain.

Any stock upon which said assessment shall remain unpaid on Saturday, the 19th day of August, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 2d day of September, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

J. WARREN CLARK, Secretary.
Office, No. 410 Montgomery street, San Francisco.

NOTICE.—At the above meeting, assessment No. 1, of 8 cents, levied July 6th, 1863, assessment No. 2, of 10 cents, levied September 19th, 1863, and assessment No. 3, of 50 cents per share, levied June 3d, 1864, were rescinded, and stockholders having paid the same, or any portion, will be credited on above assessment, No 4 accordingly.

jy22 J. WARREN CLARK, Secretary.

Vulcan Mining Company, Santa Fe Mining District, Lander county, Nevada.

NOTICE.—There are delinquent, upon the following described Stock, on account of Assessment levied on the 5th day of August, 1864, the several amounts set opposite the names of the respective shareholders, as follows:

EUROPEAN
METALLURGICAL WORKS,
—AND—
Practical Mining School,

Bryant Street, Between Third and Fourth,

SAN FRANCISCO.

THE Proprietors are at all times prepared to work or test Ores sent to this establishment—either in large or small quantities—by such process as may be found best adapted to their chemical character, after a careful analysis has been made. Test lots of Ore adapted to the smelting process attended to. Sulphuret, pyritous, and the (so-called) "refractory ores," are having especial attention paid to their successful treatment. Assaying in the humid and dry way. Also, refining by cupellation, done at moderate rates.

PRACTICAL MINING SCHOOL.

The proprietors—encouraged by numerous applications from gentlemen desirous of pursuing the study of practical metallurgy—have concluded to admit parties on reasonable terms. Having in their Mill all the necessary appliances for crushing, roasting, amalgamating, smelting, refining and assaying, as also a well extended Laboratory for the analysis of Ores and Minerals, a good opportunity is here offered to acquire a sound practical knowledge of the business.

S. P. KIMBALL, J. R. MURPHY.
10v10

To Prospectors.

THE Directors of the San Francisco PACIFIC METALLURGICAL WORKS offer the following inducements to Prospectors:

NOTICE.—Knowing it will benefit our country to have it well prospected, we agree, if any party will forward us samples of minerals of any kind for assay, express paid, inclose TWO DOLLARS for the same, to return them a correct assay, with the best method of working, and feasibility of having the same worked in this city.

NOTICE OF APPLICATION OF MARRIED WOMAN TO become a Sole Trader.—Notice is hereby given, that JANE C. SMITH, of the city and county of San Francisco, intends to make an application to the District Court of the Fifteenth Judicial District of the State of California, in and for the city and county of San Francisco, on the twenty-ninth day of July, A. D. 1865, for an order of said Court, permitting her to carry on business in her own name and on her own account, pursuant to an act of the Legislature of the State of California, passed April 12th, 1852, entitled "An Act to authorize married women to transact business in their own name," and of the Act amendatory and supplementary thereto, passed April 18th, 1862. The business she intends to carry on is that of the purchase and sale, leasing and mortgaging of real estate, the cultivation of lands, and all matters therewith, or with either of them connected, and of a general trader, in the city and county of San Francisco and the county of Contra Costa.

JANE C. SMITH.
June 29th, 1865. jy1-4w

"Say, why should man for thirst be given
If not for wine bestowed by Heaven
To quench such drought as mine?
Without it, I'm a fish on land,
A barren heap of parching sand—
Then give me joyous wine."—*Trinklied.*

Delicacy of flavor, exhilarntion without intoxication, and every other desirable property belonging to the right fermented Juice of the Grape, are to be found in the "Gold Wine," from the celebrated Bosquejo Vineyard, Yolo county.

There is no wine produced in California that can be in comparison with this, and it would be difficult to find a European wine, of the same class, that can surpass it.

The vintage of 1862 is now offered for sale, in quantities to suit, by the Agent of the vineyard,

A. S. LOWNDES

Basement of the New York Hotel, southwest corner Battery and Commercial streets, San Francisco. 20v10-3m

San Francisco, July 3, 1865. jy8

Agent Wanted.

A good Canvassing Agent can secure permanent and remunerative employment by calling at the office of the MINING AND SCIENTIFIC PRESS, 505 Clay street.

Printer Boy Wanted.

An active and reliable boy, about sixteen years of age, who wishes to learn the printing business thoroughly, in all its branches, can obtain a situation at this office upon presenting suitable recommendations.

U. S. 7-30 LOAN.

By authority of the Secretary of the Treasury, the undersigned has assumed the General Subscription Agency for the sale of United States Treasury Notes, bearing seven and three-tenths per cent. interest per annum, known as the

SEVEN-THIRTY LOAN.

These Notes are issued under date June 15th, 1865, and are payable three years from that time in currency, or are convertible, at the option of the holder, into

U. S. 5-20 Six Per Cent.

GOLD BEARING BONDS.

These Bonds are now worth a premium of nine per cent. including gold interest from November, which makes the actual profit on the 7-30 loan, at current rates, including interest, about ten per cent. per annum, besides its EXEMPTION FROM STATE AND MUNICIPAL TAXATION, WHICH ADDS FROM ONE TO THREE PER CENT. MORE, according to the rate levied on other property. The interest is payable in currency, semi-annually, by coupons attached to each note, which may be cut off and sold to any bank or banker.

The interest amounts to

One cent per day on a $50 note,
Two cents per day on a $100 note,
Ten cents per day on a $500 note,
Twenty cents per day on a $1,000 note,
One dollar per day on a $5,000 note.

Notes of all the denominations named will be promptly furnished upon receipt of subscription. This is

The only Loan in Market

now offered by the Government, and it is confidently expected that its superior advantages will make it

THE GREAT POPULAR LOAN OF THE PEOPLE.

Less than $300,000,000 of the loan authorized by the last Congress is now on the market.

This amount, at the rate at which it is being absorbed, will all be subscribed for within four months, when the notes will undoubtedly command a premium, as has uniformly been the case on closing the subscriptions to other Loans.

In order that citizens of every town and section of the country may be afforded facilities for taking the Loan, the National Bank, State Banks, and Private Bankers throughout the country have generally agreed to receive subscriptions at par. Subscribers will select their own agents, in whom they have confidence, and who only are to be responsible for the delivery of the notes for which they receive orders.

JAY COOKE,
Subscription Agent, Philadelphia.

March 25, 1865. 17v1[9.3]m

ADDENDUM.

PER OVERLAND TELEGRAPH:

PHILADELPHIA, May 17, 1865

Second Series all sold. Commenced on Third Series. Two Hundred and Thirty Millions (230,000,000) precisely like other two Series, except dated 15th July, and Government reserves the right to pay six per cent. in Gold instead of 7-30 Currency.

JAY COOKE,
Subscription Agent, Philadelphia.

MEXICAN

TEN PER CENT.

SIX YEAR LOAN.

The undersigned, having a full Power of Attorney from Gen GASPAR SANCHEZ OCHOA, Commissioner for the REPUBLIC OF MEXICO, as Agent for the sale of the Bonds of this

POPULAR LOAN,

These Bonds will be sold at

Fifty Cents on the Dollar, Gold Coin.

They bear date July 1st, 1865, and are now ready to be furnished in sums to suit, in denominations from $50 to $1,000.

The principal and interest are payable in United States gold coin.

Interest payable semi-annually at the PACIFIC BANK, in the city of San Francisco.

The payment and redemption of these Bonds and Coupons are secured by the transfer to the undersigned, as Trustee, of one-half of the fiscal proceeds of all the

Revenues and Duties

Derived from the Custom Houses of

MAZATLAN,
GUAYMAS,
MANZANILLO,

And all the Ports in the States of

Sinaloa, Sonora and Colima,

AND FROM THE MINES OF SAID STATES,

Which Revenues and Duties, so soon as collected, are to be deposited and held by the undersigned in the

Pacific Bank, San Francisco,

And employed exclusively for the payment of said

BONDS AND INTEREST.

General OCHOA has made an assignment to the undersigned of one-half of all the duties received at the above Custom Houses, for the payment of said Loan and interest, and also to appoint Agents to receive the above Revenues.

☞ SUBSCRIPTION BOOKS are now open at our Office-Room No. 3, third floor, Masonic Building, No. 420 MONTGOMERY STREET, San Francisco.

SAMUEL BRANNAN,
AGENT.

HELMBOLD'S

FLUID EXTRACT BUCHU

For Non-Retention or Incontinence of Urine, Inflammation or Ulceration of the Bladder or Kidneys, Diseases of the Prostrate Gland, Gravel, Brick Dust Deposits, Dropsical Swellings, Organic Weakness, Debility, Female Complaints, Etc.

H

HELMBOLD'S

FLUID EXTRACT BUCHU

—AND—

Improved Rose Wash

Will radically exterminate from the system Diseases arising from Habits of Dissipation, *at little expense, little or no change of diet, no inconvenience or exposure*; completely superseding those *unpleasant and dangerous remedies, Copaiba and Mercury*, in curing these diseases.

E

USE HEMBOLD'S

FLUID EXTRACT BUCHU

In all Diseases of the Urinary Organs, whether existing in MALE OR FEMALE, *from whatever cause originating, and no matter of how long standing*. It is pleasant in its taste and odor, IMMEDIATE in action, and more strengthening than any of the preparations of *Bark or Iron*.

Those suffering from *Broken Down or Delicate Constitutions, procure the Remedy at once.*

The reader must be aware that however slight may be the attack of the above diseases, it is certain to affect his *Bodily Health, Mental Powers and Happiness*. If no treatment is submitted to, Consumption or Insanity may ensue.

All the above diseases require the aid of a diuretic.

Hembold's Extract Buchu

IS THE GREAT DIURETIC.

L

HELMBOLD'S

HIGHLY CONCENTRATED

Compound Fluid Extract Sarsaparilla,

For purifying the Blood, removing all diseases arising from excess and imprudence in life, chronic constitutional diseases arising from an impure state of the blood, and the only reliable and effectual known remedy for the cure of Scrofula, Scald Head, Salt Rheum, Pains and Swelling of the Bones, Ulcerations of the Throat and Legs, Blotches, Pimples on the Face, Tetter, Erysipelas, and all scaly eruptions of the skin, and beautifying the COMPLEXION.

M

NOT A FEW

Of the worst disorders that afflict mankind arise from the corruption that accumulates in the Blood. Of all the discoveries that have been made to purge it out, none can equal in effect HELMBOLD'S CONCENTRATED EXTRACT OF SARSAPARILLA. It cleanses and renovates the Blood, instills the vigor of health into the system, and purges out the humors which make disease. It stimulates the healthy functions of the body, and expels the disorders that grow and rankle in the Blood. Such a remedy, that could be relied on, has long been sought for, and now, for the first time, the public have one on which they can depend. Our space here does not admit of certificates to show its effects, but the trial of a single bottle will show to the sick that it has virtues surpassing anything they have ever taken.

B

Two tablespoonsful of the Extract of Sarsaparilla, added to a pint of water, is equal to the Lisbon Diet Drink, and one bottle is equal to a gallon of the Syrup of Sarsaparilla, or the decoction as usually made.

The above Extracts are prepared on purely scientific principles—*in Vacuo*—and embody the full strength of the ingredients entering into their composition. A ready and conclusive test will be a comparison of their properties with those set forth in the U. S. Dispensatory.

O

HOW TO USE THE REMEDIES.

In Diseases of the Blood, Humors on the Face, or any and every part of the body, use Extract of Sarsaparilla, applying to Pimples and all external Humors or Eruptions the Improved Rose Wash.

Use the Extract Buchu for all diseases requiring the aid of a diuretic, except those of the Urinary Organs, such as Gonorrhœa and Gleet; in these use the Extract Buchu, and inject with the Improved Rose Wash.

L

☞ THESE EXTRACTS HAVE BEEN ADMITTED TO USE IN THE UNITED STATES ARMY, and also are in very general use in all the STATE HOSPITALS AND PUBLIC INSTITUTIONS throughout the land, as well as in private practice, and are considered as invaluable remedies.

QUARTZ OPERATOR'S HAND BOOK.

A Book for Every Intelligent Prospector, Shareholder, Miner and Machinist.

ZENAS WHEELER AND P. M. RANDALL,

Authors and Publishers.

BOUND IN CLOTH—144 PAGES, DUODECIMO.

THE QUARTZ OPERATOR'S HAND BOOK is presented to the public as a carefully prepared epitome of all that is valuable for the practical operator in the mine and mill. We have here all the most necessary hints and directions for testing and assaying the ores of the various minerals; an explanation of chemical terms; a brief and intelligible description of the numerous processes for roasting ores, and the extraction of metals from their ores by amalgamation and otherwise.

The work also contains an original and highly interesting discussion of the tractory and differently formed grinding plates, as applied to the reduction of ores—a subject not only of special interest to the scientific reader, but also practically of the highest importance to every quartz miner.

Professor Silliman, of Yale, and Hodgson, of the College of California, having examined this discussion, as submitted to them by its author, Mr. Randall, previous to the compilation of this work, speak of the same as not only mathematically correct, but also as of great practical value. Messrs W. R. Eckart, Jr., Engineer, (late of U. S. N.,) and W. M. Belshaw, assayer and superintendent of the S. T. M Co., to whom the entire work was submitted while passing through the press, speak of the same as one of high practical importance to quartz miners and millmen generally.

No work has been offered to the mining public of California which contains so much valuable information, condensed into so convenient a space as is here presented. In its preparation, much care has been taken to secure brevity, conciseness, and simplicity—in fact to make it a complete and reliable QUARTZ MINER'S HAND BOOK.

The Table of Contents of this book will be found on page 415 of the MINING AND SCIENTIFIC PRESS of July 1st, 1865.

Sold by booksellers generally. Price by mail, postage paid, $1.25. Address "Wheeler & Randall, at the Mining and Scientific Press Office, San Francisco." 2v1l

NEW DISCOVERY

FOR DESULPHURIZING AND DECOMPOSING

METALLIFEROUS ORES,

—SUCH AS—

Auriferous Sulphurets, Arsenites or Antimonial Telluric, Gold and Silver Ores.

By this new process, in a short space of time these ores are decomposed or disintegrated so that they may be easily ground in a common coffee or other hand-mill. A patent has been applied for. The right of using is now for sale by EDWARD ARNOLD, Monitor, Alpine county, Cal., or by

DANIEL ROSS,

Traveling Agent for the sale of the above mentioned discovery throughout the United States. All rights sold by him will be recognized by me.

Brandreth's Vegetable Pills.—This medicine, of enduring efficacy, is justly prized as a corrector of all disorders of the stomach and bowels, the common symptoms of which are costiveness, spasms, loss of appetite, sick headache, giddiness, sense of bloating after meals, dizziness of the eyes, drowsiness, and cramping in the stomach and and bowels. These symptoms being suffered to remain, a torpid state of the liver supervenes, and all the horrors of dyspepsia are experienced. Every function of the frame is to a certain extent prostrated; but a little perseverance in the use of BRANDRETH'S PILLS will ever restore the system from this state of misery. Two or three doses will convince the afflicted of their salutary influence. The stomach will speedily regain its strength, a healthy action of the liver will soon take place, and instead of listlessness, heat, pain, and jaundiced appearance, activity, strength and renewed health, will be the blessed result. Brandreth's Pills are sold at 25 cents per box, enveloped in full directions. Purchase none unless my private Government Stamp is on the box. See upon it "B. Brandreth" in white letters.

Patent Agency and Job Printing Office, 505 Clay street, San Francisco. July 1, 1865.

IMPORTANT TO MEXICAN COMMERCE.—We have been permitted to make the following extract from a private letter received in this city from the well known House of Kebe, Van der Linden & Co., of Colima, Mexico, and dated June 21, 1865:

"We are happy to state, that in accordance with the sense of equity prevailing in the Imperial counsels, justice has been meted out to us, by a decree of May 30th, nullifying the second article of restrictions in the franchises granted to commerce, and extending to the ports on the Pacific side the advantages hitherto enjoyed by those of the Atlantic."

By reference to our issue of May 20th, a full detail will be found of the grievance alluded to in the above extract. The justice which has now been accorded by the Imperial Government to the Mexican Pacific ports, will doubtless be fully appreciated by all persons holding commercial intercourse with that neighboring people.

GEN. ROSECRANS arrived in this city, the past week, in the Constitution. He was met at the boat by several U. S. Army officers and escorted to the Occidental, where he was serenaded on Thursday evening. General Rosecrans, early in the war, struck an enthusiastic chord in the public mind; and although he has of late been but little before the public, he never has and never will cease to command the admiration of the country of his adoption for his heroic and patriotic services.

A POUND of Sea Island cotton has been spun into a thread fifty-six miles long.

FROM THE OIL REGIONS.

Boring operations in various parts of the State are still being vigorously prosecuted. Several of the Eastern companies organized at the beginning of the year for the development of claims in Santa Barbara and San Luis Obispo counties, are already vigorously at work. The Adams company have removed the obstruction from their well, and we presume will soon be able to demonstrate its pumping capacity. Messrs. Stranahan & Co. have commenced boring in Marsh cañon, to the southeast of Mount Diablo, with every prospect of success. We have nothing later from the Santa Clara wells than that given by our correspondent last week from that region. From Colusa county, we hear that the Rowe company are down about 150 feet, with encouraging indications; although they have not yet reached any considerable flow of oil. There are now four, if not five companies, boring for oil in this county. The *Sun* thinks it quite certain that the oil region of that county will be thoroughly prospected during the present season.

The most encouraging intelligence, thus far, is from Humboldt county. The well of the Union company, on Mattole creek, upon which, as we have already stated, work was suspended several weeks since, seems to be bound to develop itself in spite of the wishes of its proprietors, who have declined to go any deeper until proper roads can be opened for getting the oil to market, and barrels and tanks prepared for storing it as it comes from the well. When work was suspended on this well, there were sixty feet of oil in it. Since that time it has been gradually rising, until at last accounts it had risen to the top of the well, which is down 145 feet. It is said the company intend to send down some fifty barrels of oil on the next trip of the steamer Del Norte.

A gentleman who arrived in this city by the Del Norte, on Thursday, states that another company—name not given—are boring at a point about six miles from the Union, and struck oil at fifty feet. Colonel Hopkins brought samples of oil from this last well to this city. About fifteen companies are now at work in the Mattole and Bear River districts, and it is the general belief that shipments of oil will be made in quantities from that section within the next two months.

SENATOR STEWART arrived in this city on Thursday evening by the Sacramento boat. He was met at the steamer by the committee appointed to receive him, and escorted to the Cosmopolitan, where he was cordially welcomed by a host of friends. About twelve o'clock he was serenaded by Willis' Concert Band. The exertions of Senator Stewart in behalf of the mining interests of the Pacific coast entitle him to the most peculiar consideration of all residents in or west of the Rocky mountains. Nevada may claim him as *her* Senator, *par excellence;* but California and Oregon, and the neighboring Territories as well, will unite in doing honor to one who has done more than any other man in Washington to advance and keep faithful watch over the general interests of the entire Pacific coast

A PETROLEUM COOKING STOVE.

A new and valuable invention is now being exhibited, and is also for sale, at Hoogs & Madison's Real Estate Agency, 316 Montgomery street. This invention is called the "Petroleum Cooking Stove," and is the invention of O. F. Morrel, of Chelsea, Mass. The stove requires no chimney or pipe, occupies about as much space as an ordinary sewing machine, and is fully as ornamental and neat in its construction as one of those useful machines without a case. The stove is constructed with one or two burners, is as safe in its use as an ordinary wood cooking stove. The substance used for fuel is naptha, the least expensive of the materials obtained in the distillation of crude petroleum. The naptha is placed in a reservoir attached to the stove and about three feet above it, and is so connected with the burner as to be vaporized as it comes in contact with the atmosphere in which it is burned. Two quarts of naptha will keep up a strong cooking fire, sufficient for roasting a turkey, for from ten to twelve hours. Four pies can be baked at one time with this heat, and as rapidly and well as in the best arranged brick oven, with no danger of burning. The fire can be regulated so as to burn at a cost of one cent or three cents per hour. A loaf of bread can be baked, or steaks cooked for six men, at a cost of less than one cent for fuel; a flat-iron can be heated and kept hot at a cost of three cents per hour, and neither operation will throw as much heat into the room as the burning of an ordinary kerosene lamp. The fire may be kindled and the oven heated in less than five minutes. To our mind this mode of burning naptha could be most advantageously applied for general heating purposes, and we should think would be especially valuable for warming rooms in this city. Such an apparatus need not take up any more room than an astral lamp, and, in fact might be employed for both heating and lighting. The fact that it utilizes a petroleum product, which is now of but little value, is another interesting consideration well deserving of attention. Messrs. Bullard & Battles have purchased the patent right for this invention. They may be seen during business hours at the office of Hoogs & Madison, as above, where the stove can be examined and studied and seen in actual practice.

PERSONAL.—We understand that Dr. Jackson started on Thursday last, in company with Mr. Meader, on a visit to the Union mine at Copperopolis. The Doctor will also take a look at the mines generally of that important section, and proceed thence to the Big Trees of Calaveras county. He takes instruments with which to measure their altitudes, with the view of being able to give the same on his own knowledge. We hope to be able to publish some extracts from his note book on his return.

TO CORRESPONDENTS.—We will endeavor to answer the "query" of our Grass Valley correspondent next week; "McH.," from Austin, will receive attention in our next. The letter from Capt. Paul was received too late for insertion in the present issue.

THE APPROACHING EXHIBITION.

Work has commenced and the Pavilion is now open and the committee ready to receive machinery, etc., for exhibition. A look into the Pavilion yesterday, revealed carpenters busy in completing the necessary preparation for the receipt of articles and machinery. Several large pieces of machinery have already been placed in the building, and workmen are engaged in putting up the central fountain, finishing off the "Old Folk's Kitchen," the "Restaurant," etc. We took a look at the large old fire place fitting up for the former, and concluded the executive committee intended to send for a section of one of the big trees from Calaveras for a backlog. That kitchen will be quite a feature of the exhibition. No time should be lost by those who intend to exhibit in making their preparations. Gardner Elliott, Esq., formerly an executive officer of the Mechanics' Institute, has been chosen as General Superintendent of the Fair.

Let all bear in mind that the Fair opens on the tenth of August, one week from Thursday next. We hope every friend of industry will be found promptly on hand, showing an interest in the grandest representation of California's wonderful prosperity and progress ever yet attempted. The committee have received undoubted assurances that the magnitude of the display this year must far exceed that of all former exhibitions. One reason of this is, doubtless, the fact that another such fair may not be held for years.

Our arrangements for the publication of the DAILY FAIR PRESS are far superior to those of last year. We have secured an extra quality of paper for use, and shall make a handsome sheet, and a most complete record of the Fair.

Every intelligent citizen of this coast who makes a visit of one week to the Fair, will ever have occasion to remember it as time and money well spent.

TO THE PRESS.—Our brethren of the interior press will confer a good thing upon themselves, their readers, and the interests of this coast, by reminding their patrons of the near approach of the Industrial Exhibition in this city, and requesting them to forward articles for exhibition, and to be present to reap the benefit to be derived from intercourse with one another in comparing notes upon such an occasion.

FROM MEXICO.—A private letter by the John L. Stephens, from Mazatlan, states that just as that steamer sailed the French commander arrived from Durango, from which city he had been driven by the Juraists, and his command completely routed after a desperate engagement. The Mexican forces were commanded by Caravajal.

WE learn from the Gold Hill *News* that Mr. W. D. Farrand, the inventor of the oscillating amalgamator, which bears his name, is the lessee and superintendent of the Ogden mill, located in the east cañon, below Virginia City. This mill runs eighteen stamps, and is said to be doing a good business. It is supplied with rock from the Yellow Jacket mine.

"MINER," whose communication appeared in our last issue, is requested to call at this office or send his address.

Communications.

In this Department we invite the free discussion of all proper subjects—correspondents alone being responsible for the ideas and theories they advance.

[Written for the Mining and Scientific Press.]

The Problem of Gold and Silver Extraction--A General Review---No. XV.

BY PROF. L. LANSZWEERT.

WASHING THE TORTA.

We have already alluded to the importance of this part of the patio process. We will now content ourselves with noticing the apparatus and mode. Four large tubs, built of staves, or masonry, 15 feet wide by four deep, are mounted over an arched vault, to catch the mercury which infiltrates insensibly through the pores and amounts to no insignificant sum per annum. These are open at the top, communicating by a series of apertures, six by eight inches, at about half their hight, and are provided with dashers placed on a vertical axis something resembling those of a barrel churn. The requisite quantity of ore being put in, the first water is added and the whole set in motion. The amalgam mostly settles to the bottom, while the mud passes to the next of the sieves, where it deposits a little more; then to the third, which catches some of the most impure and the heavier sulphurets; thence to the fourth, which receives hardly any at all. At the expiration of three hours the charge is drawn off, if completed, and a fresh one added, until the whole "torta" is washed, when the amalgam is removed and cleaned by hand-washing in troughs or basins, preparatory to straining and distillation.

In some haciendas the number of vats is only three, in others six; and still there is a trifling loss; while in some places only one is employed, and the waste is consequently enormous. The amalgam, containing perhaps one-eighth or one-ninth of silver, (the proportion of mercury being increased by an addition of fluid mercury, when necessary, to the lavedere, to catch the particles of amalgam, and called the *bano,*) is placed in long, sleeve-like bags of strong canvas, drained and pressed by twisting, to exclude all the mercury possible, and made into balls or cakes for distillation. The expressed mercury is submitted a second time to the same filtering operation, and yields a small ball, one-fifth per cent. generally remaining with the mercury. The dry amalgam, called "pella," contains from eighteen to twenty-eight (generally twenty-two) per cent. of silver, dependent on the state of aggregation of this metal in the ore, and the degree of pressure employed. The remaining operations of distillation and smelting are too well known to require description.

The refuse of the washing vats, the "jal," or "cahecilla," as they call it here, was formerly permitted to run out into the creek, and sold at about $8 or $10 the torta to a set of men named "despolvilladores," or concentrators, whose business it was to extract the "polvillos"—the metallic deposit containing silver and a little amalgam which escaped the vats—for sale to the original proprietors. This they did by heaping them up on a rude "table dormante," an inclined plane, about eight feet square. Having piled up the ore at the head of the table, the despolvillador, seated at the foot, throws water gently on it with a horn spoon, and the light particles flow away with the stream and are rejected, while the heavier arrange themselves near the place of original deposit, and after two or three washings are sufficiently concentrated for removal. After a preliminary washing, generally with salt, they are returned to the mills, or, when containing copper, used in the preparation of magistral. The quantity as well as richness varies wonderfully in different ores, or different grinding of the same ore, the former varying from one-fourth to thirty per cent. In Guanajuato, they are trifling—perhaps not over two per cent., and by this hand-process cost six to eight reals the arroba of twenty-five pounds, but many haciendados have lately introduced a machine, something like an English "buddle," in which the ores are arranged round the circumference of a great shallow basin of brick and mortar, and irrigated by many long tin tubes, projecting from a revolving cask filled with water in the center. When worked entirely by hand, it employs from three to four men, and reduces the cost of "polvillos" to fifteen or twenty cents the arroba.

CHARACTERISTICS OF THE MEXICAN "ARASTRA."

For ages the arastra has been the favorite mode in Mexico of extracting gold and silver from their containing rocks, and all experience goes to prove that it is the surest mode of extracting all the metals from the ore, that has ever been tried by the grinding and amalgamating process. As an amalgamator, the arastra stands unrivaled. Notwithstanding they have been thrown aside repeatedly by our go-ahead operators, still they revert back to the "primitivo arastra" as a last resort against an utter failure in their mining enterprises. Now it occurs to me, that instead of abusing the slow and sure arastra, we should study the principle upon which it works, and endeavor to improve upon its structure, thereby increasing its efficiency and usefulness. There is no process now in use that will reduce ores so completely as the arastra, and it is well known by practical men that gold cannot be thoroughly extracted until the ore is completely reduced to the fineness of gold itself; for a coarse grain of sand may contain several fine particles of gold. Stamps cannot reduce the ores so fine as an arastra, for the reason that, as soon as it is reduced to sand, the blow of the stamp forces it with the water from under the blow; as the water gives place to the blow of the stamp it takes the fine sand with it, and the blow falls upon the coarse quartz that remains behind. It appears to me that the stamp and arastra should work together—one to break the mass into coarse sand and the other to reduce it to the required fineness to complete the process.

By "patio" the loss of gold is twenty-five to thirty-three per cent. on the assay, and in some places as high as forty per cent. The "polvillos," which are the metallic portions (principally sulphides of iron, rich in silver) remaining from the washing "torta," always contains gold. They are treated a second time to obtain whatever gold and silver they may hold, but they will not yield them by the common method without a preliminary operation. It may be quite probable that the gold in these polvillos exists as a *sub-sulphide.*

The *magistral* is generally manufactured from the sulphide of copper, containing, before calcination, from six to fifteen per cent. of that metal. The furnaces in which this ore is calcined are called *comalillos.* They have a double hearth, the roof is almost or quite flat, and the fire-place in the center and running longitudinally, so that the flame plays sideways. About eight *arrobas* of the ground ore mixed with a few handfulls of common table-salt is a charge for each hearth. The fire is then gradually increased and the ore almost constantly stirred for the space of six to eight hours, when the doors and other openings are closed to exclude the air. The percentage obtained, according to the ore, is from thirty to fifty per cent. of sulphate of copper, seven to twelve per cent. of sulphate of iron, three to four per cent. of copper, not available as sulphide, and one to three per cent. of copper as oxyd.

Would not the low grades of our copper ores, if treated as above, not be profitable for the production of sulphate of copper, which consumption is daily more and more increased?

CHEMICAL THEORY OF THE PATIO PROCESS.

Of the rationale of the patio process many views have been given. All the olden theories supposed the formation of a chloride of silver from the electro-chemical action of the sulphate of copper, salt and mercury on the ore—a doctrine which every practical chemist, acquainted with the phenomena presented, knew to be at variance with the truth; chloride of silver never being present except accidentally and in minute quantities (when not found in the ore), and rather impeding than facilitating the operation. It was reserved for John A. Browning, an English gentleman, long resident in Spanish America, and favorably known for his practical and scientific knowledge of the reduction of silver ore, to propose a theory at once simple, intelligible, fulfilling all the requisites, and explaining all the phenomena of the "beneficio de patio." He supposes that a di-chloride of copper is formed simultaneously with the proto-chloride of mercury; by the action of this latter metal on the proto-chloride of copper present, this di-chloride absorbs an atom of oxygen from the air, being converted into an insoluble oxy-chloride, which dissolving in the excess of salt, communicates its oxygen to the sulphur of the sulphuret of silver in the ore, with formation of sulphuric acid and metallic silver; then going back for another dose of oxygen to restart the process "*ad infinitum,*" acting the part of the quadroxyd of nitrogen in the manufacture of sulphuric acid. Metallic silver being thus formed from the first, we can readily understand why in a well managed torta there is never more than an inappreciable quantity of chloride of silver present at any stage of the process. Dr. Browning has based a new ingenious, rapid, and economical "beneficio de patio," upon this theory. The length of time required, in Guanajuato to obtain the silver is from eighteen to forty days, according to the season, management and docility of the ores. The loss of silver on the first assay is variously stated from one to six (and in one case twelve) per cent., most of which is regained in the polvillos; that of mercury fifteen to eighteen per cent. of the amount employed, which is partly consumed (in the chemical reactions) and partly lost mechanically. Sonnenschmidt, a usually careful and reliable authority, asserts that he never was able to detect the most insignificant traces of mercury in the cahecilla. I cannot conceive how he permitted himself to fall into so gross an error. In other parts where less care is used, these losses rise sometimes to thirty-five or forty, and twenty-four per cent. of silver and mercury. The average fineness of the silver, exclusive of the alloy of gold, one-half of which at least is lost in the patio, may be put down at 988 1,000. The whole expenses are averaged at forty-three per cent. for grinding alone; loss of mercury, ten per cent. (amounting to over a million pounds annually, in Mexico); the product of silver being estimated at 900,005 pounds, extracted from 260,000 tons of ore. Such an influence has the value and consequently the loss of mercury in the product of silver, that when the price of the former rose in the last century it diminished in six months the quantity of silver reduced fifty-five per cent., or more than half. In addition to the ingredients mentioned at the commencement—and which have been in use ever since the accidental discovery of the "beneficio de patio" by Bartolome de Medina—several others have been recently introduced to diminish the loss of mercury, and with considerable success. They consist chiefly of precipitated copper, and amalgams of zinc, copper, or iron, and are employed instead of lime to "cool" the torta. They have this advantage over lime, that the mercury instead of being precipitated as an oxyd and lost, is partly revivified by the electro-positive metal, and augments the product. They were first introduced by M. Lauckner, some years ago, and from ignorance have met with much opposition, but their importance may be judged from the fact stated above, of the influence which slight fluctuations in the value of mercury alone have upon the economy of the process, and anything tending to diminish this source of expense would be felt immediately throughout the whole mining region.

[To be Continued.]

The Dyke in the Whitlatch Union.

In our notice of the Whitlatch Union mine, two weeks since, we alluded to the report that the workmen some time since struck a dyke, in consequence of which the lead was lost, and after considerable search to find it again operations were suspended entirely for some two or three months. In allusion to this matter a correspondent writes to the Reese River *Reveille* as follows:

An erroneous opinion is entertained by some of the existence of a "dyke" in this celebrated mine. It is truly deplorable that so good a mine as this should have suffered so much from a disease known as dyke on the brain. That, the Whitlatch vein is cut by dyke is neither supported by theory or fact, as proven by the extensive explorations that have been made. You are misinformed as to the fact of work having been brought to a stand still by the interposition of a large dyke of porphyry and clay cutting the vein at oblique angles. I have worked in the mine six months and never saw it. "The investigations were carried on principally underground, and were characterized by Dr. Jackson as resembling the frantic efforts of a drowning beaver to escape pursuit, rather than the sober investigations of intelligent workmen." This was the unkindest cut of all. Admitting the dyke theory to be correct, much of the work was well directed. But that theory is abused, and I do not hesitate to take issue with the learned gentlemen who adopt such views. The fact is this mine is out of the region of extensive movements, and is cut by two perpendicular seams in the shape of a sickle the first making its appearance between the chloride and sulphurets. The connection has been made here, but it is by no wise a continuous vein, passing by like the blades of a pair of shears, the chloride belt seeming to be lifted up while the sulphuret seems to incline at a greater angle. All efforts so far have failed to solve the mystery as to how the ledge is at the second fault. But I predict no difficulty in the way if they will abandon the dyke theory, look for the ledge where they lost it, a thing not yet done, drift on the line of the movement, and ere long we may look with pride as we were wont to do, on one of the best mines of Nevada.

A line of steamships between France and Aspiawall will be established and ready to go into operation sometime during next month.

[Written for the Mining and Scientific Press.]

From the Slate Range Mines.

Eas. Press:—Our regular monthly mail arrived on the 5th ult., with a fine package of your interesting papers, including that of May 6th, containing a paragraph concerning our district, for which we are much obliged. I would, however, ask, if convenient, that you would correct the last statement that "four loads of sage brush runs the engine twelve hours," to twenty-four or over.

It may be of others, situated as we are among rich mineral leads in a desert country, that the fuel we use is not sage-brush, but a little brush in size and weight equal to a lady's open parasol, and when plucked up and thrown into windrows, is frequently blown by the gusts of wind clear out of sight. Yet with it we can in twenty minutes raise steam and start the stamps. It grows all over the plains, mixed with greasewood, which is coarser and larger and full of oil.

Our lead continues most encouraging, and fifty stamps could be kept constantly running from it if we had them. No selection of rock is made, but all between the casings from three to eight feet is passed through the mill. Messrs. Jeffrey & Co. (Cornish miners of much experience) speak of the Rochester lead, in respect to its course, width and quality, as superior to any gold lead they have ever seen.

In May last, a party of Indians visited the deserted camps of the Austrian and Broman Co's., on the hill, three or four miles from us, and destroyed and carried off considerable property, including ten jacks, belonging to the Rochester company, which we had out to pasture, in a cañon, not far distant from our camp. Mr. Senrles, with a dozen of his men, called on them, drove them out and broke up their camp, and recovered some of their missing articles. But the jacks were all eaten or jerked. A gold head, ring, and some wheels of a watch were found among their traps, which is almost sure to have belonged to Geo. Yarbrough, who was killed in El Paso last August. In the party was a big-footed Indian, whose track was seen in connection with the Yarbrough murder. On the 2d of June, while Messrs. John E. Yates and Jacob Baker (employees of this Co.) were trying to dig out a missed blast, in a cistern they were sinking, the charge exploded, throwing them some feet with great force. Yates received a terrible gash on the face, laying open the right side from the ear to the corner of the mouth and down to the point of the chin. This was neatly sewed up by Engineer Harvey, and is now well healed. One of his feet was badly bruised or wrenched and has not yet recovered. Baker was badly burned in the eyes, face and wrists and has not yet recovered the use of the left eye, and there is danger of its being permanently impaired.

Yesterday, July 1st, Captain McElroy and ten men of his cavalry company, stationed at Camp Drum, Wilmington, arrived with two teams loaded with baggage and forage, and on Tuesday, the 4th, they are to start out on a raid upon the Indians. C. W. T.

Slate Range, July 2d, 1865.

New Hay Press.—The Petaluma *Argus* gives the following description of a hay press recently invented by Mr. Wm. Moeh, of Sonoma county. It appears to be a most complete and serviceable machine. Its advantages can be noticed by any one at all conversant with the use of such machines. It is described as follows: "The press is worked by common horse-power, and the team is kept in constant motion. The press is fed just as grain is fed into a thresher, and the only interruption to this is in shipping the bale into a false chamber, which requires but a few seconds of time. It requires an active hand to tie the bale and have the false chamber in readiness to receive the next one. This discharging apparatus alone is a clear saving of time equal to the daily labor of one man. The hay passes between rollers into an oscillating chamber, where it falls in regular sheets or folds, and makes a compact bale so square and regular in shape that they can be piled up in almost as much regularity as brick. On trial, it turned out a bale every three minutes three feet six inches long, two feet deep and twenty-two inches wide, of an average weight of about one hundred and fifty pounds, and the hay was of the very dryest and lightest character."

Cannon Casting in Mariposa.—Messrs. Wilcox & Young, founders, at Bear Valley, Mariposa county, recently cast a cannon for home use, which they presented to the Union men of Hunter's Valley, Mariposa county.

[Written for the Mining and Scientific Press.]

A Trip to the Mountains.

NOTES FROM THE JOURNAL OF A. S. N.

CAMPO SECO.

In the vicinity of this place we visited three copper mines—the Copper Hill, Campo Seco and Lancha Plana. The Copper Hill mine is situated about two miles from the village, near the Mokelumne river. We saw at this place some fine shipping ore, although but a small quantity has been taken out of the mine. The ore is elevated by water power, the water for the machinery being supplied from the Mokelumne river, and conducted by a ditch for a distance of seven miles. The superintendent being absent, we were not furnished many items for our journal.

The Campo Seco mine is situated about one-half mile south and east from the Copper Hill. This mine is also worked by water power, the water being supplied by the ditch from the Mokelumne. The superintendent, Mr. Morell, very kindly invited us to descend the shaft and examine for ourselves. The shaft is over 200 feet deep. There are three drifts; the first at a depth of 90 feet; the second at 150, and the third at the depth of 200 feet. The width of the vein, where crossed, is twenty-two-and-a-half feet, although the shaft is not yet deep enough to determine the width of the principal vein or the value of the mine, and it is now paying all expenses of working. The company are satisfied with this, for the present, while they are drifting to ascertain the value of their claim. The average of the ores now taken out is about ten per cent. copper. The average of the ores which they ship is twenty per cent. The company are now reducing their poorer ores, near their works, by the "roasting process."

We were informed that a company had been organized for the purpose of erecting a smelting furnace near this mine. During the month of April and May ninety-three tons of ore were shipped, and during the month of June, forty-five tons.

We next visited the Lancha Plana mine, situated about one-half mile south of the Campo Seco. The company have a fine steam engine for their hoisting works. The shaft is 230 feet deep. At the depth of 160 feet the company are drifting for the purpose of obtaining air. The drift already extends over 300 feet. Considerable ore has been shipped from this mine, some of which is of a very fine quality. The width of the principal vein has not yet been ascertained.

These three mines all promise well, but whether there can be three large veins of copper so near each other is doubtful.

The placer mines in this vicinity are worked chiefly by Chinamen, who make their "four bits a day."

SAN ANDREAS.

Here we visited several mines of different descriptions. First, was a shaft sunk from the top of Douglas Hill into what is called a channel. This channel extends for several miles, and is filled with drift, composed of gravel, clay, talc, etc. It was evidently formed before the last upheaval in that section, and was an ancient river-bed, or estuary of the sea. The streams from the mountains do not flow in these ancient channels, but often by the side of them, and sometimes cross them; while immediately over these channels there are frequently high hills. The shaft on Doulgas Hill has been sunk to a depth of 110 feet, and the bottom of the channel is not yet reached. Where they have drifted from the shaft the bed-rock is found to be worn perfectly smooth by the action of the water at some former period. The drift taken out of this channel is washed, which produces large quantities of gold.

We next visitsd a quartz claim and saw some fine specimens of gold-bearing quartz. The vein is said to be very valuable, although but little has been done in the mine. The rock is elevated and the pumps worked by horse-power. The rock is also crushed in the old Spanish style, by the same horse-power, only one horse being used. My friend Willie noted it as a "one-horse concern." The claim is called the "Everlasting." The name was evidently suggested by their *modus operandi*. We have no doubt but that the claim is a valuable one, and that when men of capital and enterprise take up the work, it will pay very handsome dividends.

We next visited a tunnel on Gold Hill, which is being worked into the same channel, above mentioned. The tunnel slopes along down the bed-rock, giving a fine opportunity to examine its character. The rock has the appearance of any river-bed, being worn, undoubtedly, for a long period. The drift in the crevices of the bed-rock produces large quantities of gold, while the whole of the drift in the channel pays the miner well for taking it out and washing.

[To be continued.]

[Written for the Mining and Scientific Press.]

Letter from Virginia City—The Late Strike of the Jewel Company.

EDITORS PRESS:—Since my last, from Amador county, I have passed eastward, across the Sierra, to this place. For a stranger to know much of the business and mining interests of Virginia City and vicinity, requires a long time; everything here being managed on an extensive scale as compared with any place I have visited in California. After hurriedly examining the mining operations of this place, Gold Hill and Silver City, and with my ears yet ringing from the continual crash of machinery, driving of steam-engines and shrieking of whistles, I passed down the cañon to the celebrated "Devil's Gate district," situated in Spring valley, and about six miles southeast from Virginia City. A new excitement has taken place in this district in consequence of a very rich strike having been made in the "Jewel" ledge; and other companies in that vicinity are rushing their work in hope of finding the same vein. Through the kindness of the superintendent of the Jewel Gold and Silver Mining Company, who accompanied me into their tunnel, and showed me their ledge, I learn the following facts:

The Jewel Gold and Silver Mining Company was incorporated in San Francisco November 22, 1862, and is principally owned there by Mr. Parker and others; some 143 feet only, being owned here. The length of the claim is 600 feet, length of tunnel 990 feet, depth of shaft on the ledge, from the lower level of the tunnel, 30 feet—from the surface, about 135 feet. On the lower level of the tunnel, where the ore was first struck, small veins can be seen centering from different directions in a dark, decomposed mineral, which is mixed with barder quartz; the black being very rich and said to yield over $800 to the ton. At this point the ledge is less than two feet wide; at the depth of the shaft, or 30 feet down from the lower level of the tunnel, the lode widens to nearly six feet, and the rock becomes hard, and, as will be seen, widening rapidly as you go down. The whole labor on this claim has been done principally within the last eighteen months, by working an average of four men day and night. The first assay of the rock at the lower level of the tunnel, where first struck, gave the following result: Silver, $142.15; gold, $24.11; total $167.21 per ton. Thirty feet lower—the present depth of the shaft—a second assay was made, with the following result: Silver, $172.42; gold, $62.78; total, $235.20 per ton. These assays were made and certified to by Mr. Wm. H. Harris, assayer, and the rock was fairly averaged, as certified to by the same gentleman. It is confidently believed that in sinking some 100 feet lower, that the ledge will be from 25 to 30 feet wide, and the expense of sinking will be more than paid from the rock taken out, as the work progresses. Parties of mill men, and others, are daily visiting this "lucky ledge," and nearly all pronounce it the continuance of the celebrated "Comstock." The mineral has all the appearance of the Ophir or Yellow Jacket. North of, and near the Jewel, are the Sperry and Genesee companies, each running for the same ledge. The Sperry has a shaft 130 feet deep, and the Genesee, I learn, is at nearly the same depth. They are both hastily engaged erecting steam hoisting power. Part of the machinery is already on the ground, and they inform me it will be in operation in a few weeks.

In this valley, and east of the Jewel, is the Howley Gold and Silver Mining Company, having a wide, well-defined ledge, on which they have been running an incline shaft. They are down some 150 feet, having a fine steam hoisting engine. This company has not been doing anything for sometime; but I am told that it will be in operation again in a short time. On the Governor Nye, near the Hawley, they are busily engaged in sinking a shaft. The Governor Nye is on the north extension of the Dana, near that claim, with every prospect of striking it soon. They are now down 112 feet, and drifting southeast, with very flattering indications. Since the strike in this district, by the Jewel, parties from Carson and Virginia City, and surrounding country, have been locating claims rapidly, and every foot of ground for a great distance south, is being claimed. I send you some of the rock taken from the Jewel, and partly dug from the ledge by myself, from which you can form an idea of its general appearance. I expect soon to visit other localities near this, from whence I expect to give you something further of this rich mineral State of Nevada. L.

Virginia City, July 23, 1865.

Mechanical.

Strength of Cast Iron—Important Discovery.

Mr. W. M. Arnold has been making some experiments to improve the strength of iron, which promise to be of some considerable importance. Mr. Arnold, by using a small per centage of a metallic composition, added in a proper manner to cast iron, has succeeded in increasing its tensile strength from 25 to 50 per cent., and it is not doubted that by further treatment still greater strength will be attained, so that the weight of many descriptions of castings may be reduced fully one-third and yet be stronger than if cast in the ordinary manner. Tests of the iron as treated by Mr. Arnold's process have been made at the Morgan Iron Works and the Ward Iron Works, and the results are thus stated by the Superintendents of these Works:

1st. It is closer grained and more equal throughout the whole of its mass than castings of ordinary iron, which invariably show an unequally distributed, porous or coarser grain, and therefore a weaker and unreliable center.

2d. The composition iron is without a chilled exterior scale, and so much softer than ordinary cast iron; it can easily be filed, drilled, cut with screw thread, and planed.

3d. It also takes a fine steel-like polish, and, compared with the ordinary cast iron, on account of its softness and malleability, it saves to the workmen much labor and expense in grinding, hardening and sharpening tools.

4th. This iron being changed in its molecular composition is less liable to be corroded or otherwise acted upon by acids or salts.

5th. It is not apt to chill, and if cast in a chill mould, it does not, like ordinary cast iron, lose its softness and partial malleability, yet is rendered as even and compact as fine steel.

6th. By re-melting, or by repeated treatment with the proportioned alloy, the strength of this iron may be increased to two, three and four times the original tensile strength.

Prof. Fleury, a practical chemist, who witnessed the trial of the new composition at the Morgan Iron Works, gives the following interesting account of the process and its results:

The new process consists in liquifying a certain alloy, and adding about 6 per cent. of the same to the melted cast iron. About 200 pounds of common foundry cast iron was poured from a large reservoir into a ladle, and then subdivided into equal portions, about 100 to each, poured into two smaller ladles. The alloy had been previously melted in a crucible in the brass foundry, and while yet liquid and highly heated, added to the iron in one of these smaller ladles. To prevent the flying of sparks, a conical shaped cap, with a stove-pipe extending about six feet upward, was placed upon the ladle, and the alloy, through a lip, opening on the side of the cone, poured into the molten pig iron. A small quantity of borax, as a flux, was also thrown on the surface of the iron. A puff of white vapor, accompanied by a flame of yellowish red color, mixed with a few flames of a white bluish hue, rose rapidly from the surface of the pig iron, which for a moment boiled up, but quickly subsided. The two ladles, of which one contained the alloy, while the other was left without it, were then emptied at the same time into the previously prepared sand moulds. The treated iron exhibited a much greater fluidity, and cooled more gradually than the iron that contained no alloy.

After the pieces in the moulds had sufficiently cooled, the writer had a few of them broken, and compared their texture. A remarkably close, compact and uniform texture throughout the entire mass, distinguishes this iron at once from that containing no alloy, which latter was coarser grained in the center, while the grain in the former was uniform all through.

The side of one of the treated square pieces, filed and polished, exhibited a beautiful steel-like lustre, without any imperfection.

The tensile strength of two pieces, one of which had been prepared by the new process, was afterward tested at the U. S. Cannon Foundry, at Cold Springs, N. Y., and gave the following results:

The treated pieces broke at.....21,200 lbs.
The one not treated broke at.....12,000 lbs.

giving to Mr. Arnold's iron a difference in his favor of 9,000 lbs. Other testimonials from the Brooklyn Navy Yard, Ward, Trenton, U. S. Cannon Foundry and others, show that Mr. Arnold has succeeded in raising the strength of cast iron from 17,000 lbs. to the square inch, to 33,000 lbs., from which facts we may safely conclude a still greater strength perhaps extending to 40,000 or even 50,000 lbs., might be obtained by repeated treatment. A comparative test on two pieces of the same kind of iron of which one had been treated with various acids and salts, exhibited a remarkable difference in favor of Mr. Arnold's iron, which was very little acted upon when compared to the rapid corrosion of the others. The strengthened pieces were remarkably malleable and tough, requiring repeated hard blows of the hammer before breaking. They were ea... filed and drilled.

The deductions drawn from the facts are teresting, and present a large field to useful plications. As the tensile strength of iron can be nearly doubled by Mr. Arno process, the weight of our present castings all kinds of machinery for ships, bridges house building, for railroad car wheels, sh ings, chains, anchors, etc., can be reduced third, and still be stronger than at present.

The resistance to acids and salts may m it adaptable for casting propeller blades various other shipworks, for which a very pensive and heavy metal is used, such as c nearly three times the price for which strengthened iron of Mr. Arnold can be ma

For castings of common this iron may, account of its toughness and finer texture, haps, answer better than the more expens east steel. It seems even possible that t strengthened iron, after having been anneal enn be worked into armor plates, railro bars, and when hardened afterwards, as p posed by the inventor, cast into railroad tyr For cutlery, sewing machines, rifle and pist parts and agricultural implements, this pro erly annealed cast iron may prove of gre value.

In conclusion, the writer presents a f speculations as to the theory which he supp ses to underlie a remarkable change of textu that is produced by the addition of the alloy It is very probable that by the infusion of th metals of the alloy into the cast iron, the pores and interstices which exist between the molecules of iron are filled up, and cause a more regular and closer contraction while cooling. It might also be stated that the zinc of the alloy, finding some carbonic oxyd in solution, decomposes the same and causes the boiling up of the iron.

The yellowish red flame issuing from the iron, while the alloy is added, is a most remarkable incident, and a thorough chemical analysis to ascertain the quantity of carbon contained in the strengthened iron, would throw much light upon the subject.—*Railway Times.*

THE EXPECTANTS.—Who shall tell the hopes and fears that are stitched into little frocks for this form not yet seen! All the world over, the quiet, thoughtful brow of expectant womanhood bends over them silently. Sometimes a glad smile lingers on the lips; sometimes the busy hands lie idly folded over the soft cambric folds, as memory carries them back to their own childhood; just so their mother sat, with just such thoughts busy at heart and brain, before they were nestled in a mother's welcoming arms. Ah! never till now did they ever fully realize what a mother's love may be. Never till now did they retrace the steps of childhood, girlhood, and maturity, so carefully, to note all the Christ-like patience and tenderness to which those long years bear witness. Then solemnly comes the thought. "Just as I looked up to my mother, this little one will look up to me. Me!" Warm tears fall fast on the little frock that lies on the lap. "Me! Ah! how do I know that I shall teach it aright?" and with the happy love-thrill is mingled a responsibility so overwhelming that it cannot be born alone. Nor, thank God, need it be, nor is it. Ah! whatsoever fathers may think, mothers must needs look upward. The girl-mother, from that sweet, sacred moment, will rise, if ever, disenthralled from her past frivolity, and with the earnest, seal of a new baptism on her brow.—*Fanny Fern.*

THE HOLE IN THE SKY.—More remarkable perhaps, on account of singularity, says Vigne, in his travels in Mexico and South America, is the "Hole in the Sky," (for it appears to be nothing else), the dark space known, even to those who have not seen them, that one of the peculiarities of the southern heavens are dark, starless spaces, but the "coal-sack" may be termed black in comparison with the sky. It lies on the left of the cross as it faces an observer, and nearly touching the lower part of its major axis, which it equals in hight. The curious abruptness and freshness of the oval shaped and broken outline of its entire circumference suggests the idea of its having been formed by violence. It looks as though the canopy of heaven had been shot through. The edges of two or three folds of strata, so to speak, are seen on the left side, more particularly in receding perspective, and gradually leading to and blending in what appears to be black, lightless space beyond. Placed at the south pole, and so unlike anything else in the sky, it has an aspect of special design. It can be imagined a place of exit or egress for mighty rushing forces: the adit from the light to a Tophet of outer darkness, or a "black Gebenna" with the cross shining in front of it.

CANADA has profited by our war, but now is losing its population, and the newspapers of that country are distressed about it. In some quarters fully one-third of the people are leaving for the United States.

From the Stock Circular of Associated Brokers of the S. F. Stock & Exchange Board.

SAN FRANCISCO, SATURDAY MORNING, July 29th, 1865.

The money market exhibits a fair degree of activity, with a full supply of accessible means for loan purposes, upon good securities, a 1¼@1½ ₱ cent. per month in bank. Negotiations are reported at rates even more favorable to the borrower; but these transactions are of a peculiar nature, and do not, perhaps, reflect the actual condition of the market. Out-door transactions are made at the rate of 1½@2½ ₱ cent. per month.

Receipts of treasure from the interior mining districts since Saturday last amounted to $850,000, making an aggregate of $4,000,000 thus far the current month.

In the absence of an active shipping demand for bullion, the market remains dull. Gold bars have been taken to account, by bankers and others, this week, at 820@825, and silver is selling at from ¼ ₱ cent premium to 2 ₱ cent. discount.

Legal Tender Notes were dealt in to the extent of $65,000, at 74⅛@74¼c. then sold at 73¾c, and closed at 73⅝c bid, 74c asked. Some $25,000 7-30 U. S. Bonds (June 15th issue) were sold, with accrued interest, at 74½@74⅝, and are now held at 74¾. Our latest advices from the East quote gold at 142 on the 20th inst., and mention considerable shipments of Government securities abroad on European account.

The share market continues stagnant, and nearly all leading stocks have been offered this week at lower prices. The present financial condition of some of these companies is less flattering than it was supposed they would be at the close of the current month, and if no important developments are made at an early day, still less confidence will be felt in their future productiveness. The work of exploration progresses, however, with the utmost vigor, and no expense is spared to bring to light the hidden treasures of the Comstock lode.

Gould & Curry is in less favor, declining from $1,750 to $1,700, and now offered at $1,575. The lower drift, from the D street shaft, has disclosed nothing new during the week, and is now passing through a stratum of porphyry similar to that found above in the old works. The entire product of the mine this month, from the upper levels, has averaged 1000 tons of ore per week, a portion of which is being reserved for future use. The company have already a large accumulation of good ore on hand, but propose to increase this surplus.

Alpha is in better request, and 10 feet were sold, declining from $1,460 to $1,400, rallying to $1,500, and closing at $1,600 asked. An assessment of $90 per share, or $360 per foot, has been levied upon this stock, making in all thus far, $720 per foot. This assessment, it is said, will cancel all the liabilities of the company.

Yellow Jacket has been actively dealt in at fluctuating rates; opening at $1,040, advancing to $1,200, declining to $1,085, rallying to $1,135, receding to $1,100, and closing at $1,150. It is rumored that a large assessment will be levied at an early day to liquidate the indebtedness of this company, but so far as we can learn, no official action has been taken in the premises, nor is an assessment contemplated at present by the trustees. Recent advices represent an improvement in certain portions of the mine.

Savage has been exceedingly dull, and small sales were made at rates declining from $1,300 to $1,250, closing at $1,200 asked. We are advised of no improvement in this mine. An adjourned meeting of the stockholders was held yesterday, but no quorum was present.

Crown Point declined from $950 to $875, and was held yesterday at $875. The main shaft is now down 285 feet from the surface, and 55 feet from the 230 feet-level. The presence of a large volume o water impedes operations, however, at the present depth, and some time will be required to open a new level.

Belcher has also obtained less favor, and some 34 feet changed hands, advancing from $840 to $855, declining to $805, and selling at the close at $800@810. Hale & Norcross rose from $560 to $610, fell to $590, rallied to $600, and closes at about $590 asked.

Ophir has been more actively dealt in, and 88 feet were sold, declining from $500 to $445, seller 30, rallying to $468, dropping to $385 cash, and closing at $395@400. The second trial of the Burning Moscow vs. this company, having resulted in a disagreement of the jury, as was stated last week, a motion to change the place of the next trial has since been granted at the instance of the Moscow company. The receipts of bullion from the Ophir mine, during the past four weeks, amounted to $45,000, but the present liabilities of this company exceed $50,000, and are likely to be further increased.

Empire Mill & Mining company is inactive, but well controlled, and firmly held at about $500 per share. The ore in the lower levels is said to show a decided improvement, and the future prospects of the mine are thought to be quite flattering. The usual dividend of $20 per share will be declared out of the earnings of the present month.

Chollar has continued to attract some attention, and 216 feet were sold, advancing from $425 to $445, receding to $400, rallying to $437, and changing hands yesterday at $448@465.

Potosi has been exceedingly active, and 661 feet were dealt in, rising from $415 to $435, dropping to $385, rallying to $410, then selling at $422, and closing at $480@482½, assessment of $50 delinquent. Recent developments in this mine are said to be rather more favorable.

Uncle Sam has been less active and also in less request this week. Some 300 feet were sold, receding from $300 to $245, advancing to $275, declining to $255, then selling at $260, and closing at $272@273.

Overman fell to $230, rallied to $260, again declined to $230, and closes at about $250. A recent crushing of 100 tons of ore at the Vivian mill is said to be favorable. From the different levels the company anticipate hoisting for the present an average of some $60 tons per day. The lower level now discloses, it is said, a large body of good ore. On the 406-feet level the drift is now 160 feet distant from the shaft.

Imperial has been moderately dealt in within a range of $226@240, closing at $228. The receipts of bullion for the current month, will, it is thought, exceed $110,000—being some $40,000 in excess of last month. A larger dividend is anticipated. The mine is said to be looking well.

Bullion fell from $172 to $172½, and closed at $160. Burning Moscow fell from $34 to $30, rallied to $31½, and closed at $35½. Nevada J. G., was sold at $19@20, and De Soto at $10@10½.

Sierra Nevada has revived a little, and some 1200 shares were sold, steadily advancing from $14 to $19, then selling at $22½, and closing at $25. In stopeing up from the lower level, some favorable indications have been met with, it is said. North American rose from $40 to $44, fell to $40, and closed at about $41½

The recorded sales of Stocks and Legal Tender Notes, since Saturday last, amounted in the aggregate to $948,340

MECHANICS' FAIR.

DAILY PRESS.

The Proprietors of the MINING AND SCIENTIFIC PRESS having been granted the privilege of printing the DAILY PRESS at the Pavilion, during the approaching Exhibition, are making complete arrangements to publish a full and faithful record of the Grand Exhibition, and will present gratuitously to all visitors and exhibitors the LARGEST, most ATTRACTIVE and VALUABLE paper ever issued at a public fair.

Its Free and Extensive Circulation

will render it peculiarly desirable journal for advertising. From SEVEN to EIGHT THOUSAND individuals visited the exhibition last season in a single day and evening.

Our printing press, in active operation, rapidly throwing off an interesting sheet into the very hands of the anxious throng, presents an attractive scene, affording one of the most novel and effective modes of advertising ever offered through the columns of a newspaper. Many persons being eye-witnesses to the printing of the paper, preserve copies as reminiscences of their visit to the Fair, while others procure bound volumes to be retained as a permanent record of the Exhibition, giving a further benefit to advertisers in addition to its wide circulation.

Those wishing to secure space for advertising in the MECHANICS' FAIR DAILY PRESS, will do well to make early application to the proprietors or their agents.

Payment will not be solicited until after the advertisements appear and are found to be according to contract or the satisfaction of the advertiser.

DEWEY & CO.,

Patent Agents, Publishers of the Mining and Scientific Press, and Job Printers, 505 Clay street, San Francisco.

Notices of the Press.

Following are a few of the select compliments paid the first volume of the DAILY FAIR PRESS, last season:

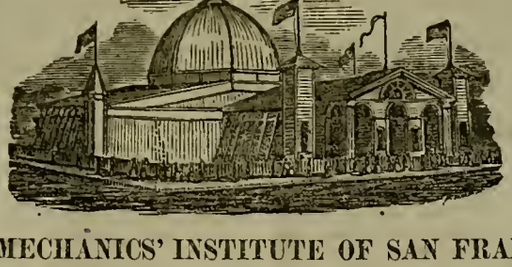
THE SCIENTIFIC PRESS proprietors strike off and give away thousands of their little sheet, entitled THE MECHANICS' FAIR DAILY PRESS. The second issue of this paper, published last night, gave the multitude some intelligence of the Washoe disaster. There were great crowds all the evening about the telegraph and the presses, many of whom had their first sight at the practical working of these great motors of civilization.—[S. F. Evening Bulletin, Sept. 7, 1864.

SCIENTIFIC PRESS.—A printing office has been established at the Mechanics' Fair, and Messrs. Dewey & Co., the enterprising publishers of the MINING AND SCIENTIFIC PRESS, are issuing from it a handsome double-sheet daily, which is a credit to themselves, its editors, and to the Fair.—[S. F. Morning Call, Sept. 8, 1864.

THE MECHANICS' FAIR DAILY PRESS is the title of a very neat quarto paper published at the Industrial Fair Pavilion, by Dewey & Co., of the MINING AND SCIENTIFIC PRESS. It reflects great credit, as does the weekly, upon the enterprise and ability of the publishers. We want it regularly.—[Roese River Reveille.

SUMMER FRUITS.—The following facts are worth reading and remembering, especially at the present season of the year: "Acids promote the separation of bile from the blood, which is then passed from the system, thus preventing levers, the prevailing disease of summer. All fevers are "bilious," that is, the bile is in the blood. Whatever is antagonistic of fever is cooling. It is a common saying that fruits are "cooling," and also herries of every description. It is because the acidity which they contain aids in separating the bile from the blood, that it aids in purifying the blood. Hence the great yearning for greens, and lettuce, and salads in the early spring, these being eaten with vinegar; hence, also the taste for something sour, for lemonade on an attack of fever. But this being the case, it is easy to see we nullify the good effects of fruits and berries, in proportion as we eat them with sugar, or even sweet milk or cream. If we eat them in their natural state, fresh, ripe, perfect, it is almost impossible to eat too many, to eat enough to hurt us, especially if we eat them alone, not taking any liquid with them whatever."

THE FIFTH INDUSTRIAL FAIR



OF THE MECHANICS' INSTITUTE OF SAN FRANCISCO,

To be Held in the Mechanics' Institute Pavilion in August, 1865.

The Mechanics' Institute having determined to hold their Fifth Industrial Fair during the coming season, the Executive Committee would respectfully invite all persons desirous of exhibiting Machines, Manufactures, Agricultural Implements, Horticultural Products, Minerals, Ores, and Works of Art, to make application immediately, in order that the proper space may be allotted them.

The Exhibition will be open to the public on Thursday, the 10th day of August, at 10 o'clock A. M.

The general management of the Fair is entrusted to an Executive Committee, consisting of the officers of the Institute.

No contracts or agreements will be recognized unless made by the authorized agents of this Committee.

A competent person will be in attendance at the Pavilion to receive and register all goods designed for exhibition, and will receipt therefor.

Contributions of Machinery and other articles that require long time to prepare for exhibition, will be received from the 15th of July to the 2d of August.

Articles for exhibition that require large space may be entered on or before the 20th day of July, and space will be allotted to the exhibitor on or before the 2d of August.

The Picture Galleries will be ready for the reception of Pictures, Embroideries, Wax and Fancy Work of all kinds, on the 1st of August, when space will be allotted.

The Committee will be prepared for the reception of Fruits, Flowers, Agricultural and Horticultural Productions, and design to have the tables so arranged that the best display possible can be made in this department, and every effort will be made and care taken to preserve their freshness, so that exhibitors may receive full credit for their productions. Those wishing space on these tables should engage it at an early day. There will be space reserved for additions in this department during the Fair.

The several transportation companies, as on former occasions, have, with commendable liberality, consented to transport articles intended exclusively for exhibition free of charge, and Messrs. Wells, Fargo & Co., in like manner, will take charge of them.

The Committee have the fullest confidence that the coming Fair will not only be the most complete and varied in its character, but will also be more attractive than any previous exhibition of this kind ou this coast.

No pains or expense will be spared to give the contributors satisfactory opportunities in the spacious pavilion of the Institute for the display of their contributions, and to furnish whatever may be necessary to make the Fair an institution where those who frequent it may be both pleased and instructed.

All articles forwarded should be labeled "For the Industrial Exhibition," San Francisco.

All communications to be addressed to C. S. HIGGINS, Corresponding Secretary.

NOTICE.

The co-partnership heretofore existing between John Youngberg, Stephen H. Covert and William B. Gleason, is hereby dissolved by reason of the said Gleason and Covert having left for the East. This is to notify all persons that I shall pay no debts contracted by the said parties from and after this date. JOHN YOUNGBERG.

San Francisco, May 15th, 1865. 20v10-1m

New Volume

—OF THE—

Mining and Scientific Press

Issued every Saturday. Each number contains 16 pages and 64 columns (size of Harper's Weekly).

PUBLISHED BY

DEWEY & CO.,

Patent Agents, Publishers and Job Printers, 505 Clay Street, San Francisco.

THE ELEVENTH VOLUME

Of the MINING AND SCIENTIFIC PRESS commences under advantages most gratifying to its publishers, who assert, with pleasure, that a continued improvement in this journal may be anticipated by its numerous and rapidly increasing readers.

We shall continue to devote a large space in our columns to the various and best methods of treating ores and saving gold and other precious metals in every form, furnishing valuable hints to millmen, prospectors, oil-workers and miners generally, not to be found in any other publication.

New machinery, latest inventions and discoveries, and all matters pertaining to the mechanical, manufacturing and industrial resources of the Pacific States, will receive careful attention.

Stock market reports will be published as received from the official records. Our carefully compiled "Mining Shareholders' Directory" will prove a faithful monitor to parties holding stock, and a desirable record for reference to brokers.

Friends pleased with our efforts in the publication of this PRESS can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and News-dealers, acting as our agents, will receive liberal commissions.

1852. 1865.

Thirteenth Year of Publication.

THE GOLDEN ERA.

Founded in 1852.

The oldest Weekly Paper in the State, permanently established, and more widely circulated at home and abroad than any other on the Pacific Coast. In California, the Atlantic States, and throughout the entire field of its great and rapidly increasing circulation, THE GOLDEN ERA is universally regarded as a Literary and Family Journal of unequalled excellence. Among its contributors are all the best writers on this side of the Continent, and correspondents of distinguished ability in New York, Paris and London.

Liberal Terms to Clubs.

THE GOLDEN ERA is furnished to CLUBS at the following rates: Three Copies, one year, Ten Dollars; Five Copies, one year, Fifteen Dollars; Ten Copies, one year, Twenty five Dollars. An extra copy will be forwarded, free, for one year, to the person sending a club of five or ten subscribers.

THE GOLDEN ERA is now enlarged by the addition of eight columns to its pages—and presents fifty-six columns, containing the greatest possible variety of Valuable and Entertaining, Original and Selected Matter, all combining to render THE GOLDEN ERA a Literary and Family Journal of surpassing interest and attraction; a Welcome Guest in Cottage and Cabin; the favorite at the fireside in City and Country, the most useful, agreeable altogether desirable publication for California readers and their kindred and friends in the Atlantic States, Europe, and elsewhere. Every Household in the Mountains and Valleys, the Cities, Towns, and Mining Camps of California and throughout the Pacific States and Territories, should receive and welcome THE GOLDEN ERA as a regular weekly visitor.

Serial Romances in The Golden Era.

The most popular Novels of the present day published as Serials, from week to week, in the GOLDEN ERA, from advance sheets, simultaneously with their appearance in the English and Atlantic Periodicals.

Among the contributors to the GOLDEN ERA are all the prominent writers of Literary Repute in California and on the Pacific Coast, also correspondents and contributors of distinguished ability in the Atlantic States and Europe, comprising an array of Talent and Genius unapproached by any Literary Journal in California, the Atlantic States, or Europe.

IN THE GOLDEN ERA,

"THE FAIR LILIAS;"

Or, "LIFE IN DEATH,"

A New Story, by PIERCE EGAN, Author of "The Poor Girl," "The Flower of the Flock," "Lady Maud," "The Snake in the Grass," "Such is Life," Etc.

PIERCE EGAN is undoubtedly the most fascinating and attractive Novelist of the age. His stories are eagerly sought for, read and admired by hundreds of thousands in England and America. "THE FAIR LILIAS; or, Life in Death," surpasses, in exciting interest and thrilling situations, all of the productions of the celebrated author, and is Pierce Egan's masterpiece.

THE GREAT SERIAL,

"OUR MUTUAL FRIEND,".....By Charles Dickens.

TO ADVERTISERS.

Best Advertising Medium.—The Golden Era is the oldest Weekly Journal in California, and indisputably enjoys by far the largest circulation in the city of San Francisco and in the interior of the State.

THE GOLDEN ERA

Is universally read in every city, town, village and mining and agricultural precinct in California, and offers unusual and unequalled advantages to those who desire to bring their business prominently before the community. Only a limited space is devoted to advertising. All advertising pages are also largely occupied with fresh and interesting reading matter, and no advertisement can escape attention. The charges for advertising are not so large, proportioned to the benefits derived, as those of other papers. Liberal terms will be made with those who advertise for three or six months, or by the year.

BROOKS & LAWRENCE,

GOLDEN ERA BUILDING,

No. 543 Clay street, near Montgomery, San Francisco.

Mining Summary.

WASHOE.

Owing to the general change which has recently been introduced into the management of the mines in and about Virginia City, there is now a marked scarcity of ore for the mills in that locality, and as a consequence, the price of crushing has been reduced from $22 and $25, to $17 and $18; while there is also quite a falling off in the weekly shipments of bullion. This apparent lack of prosperity is, in reality, one of the most hopeful features which has yet been noticed in that important region. The change alluded to is the abandonment of the practice which has heretofore obtained, of exhausting the mines of their richest ores, without taking the precaution to push ahead with those preliminary explorations which are indispensable to a future and continuous working of all mines. The necessary consequence has been a depreciation or entire suspension of dividends, and in the cases of non-dividend-paying mines, high and frequent assessments instead. Wild and reckless speculation, and not unfrequently most criminal proceedings, have resulted from this mistaken policy in the past management of many of the Washoe mines. The new mode of management will restrain this reckless spirit of speculation, and introduce a more safe, practical and business-like manner of working, under which there is good reason for believing the capitalist will be more safe, and a new and wholesome impetus will be given to business generally throughout the Eastern slope. The reduction in the cost of crushing, and the general spirit of economy which will hereafter be introduced into mining as well as mill operations, will also have the effect to give value to many mines, and much ore that has hitherto been left in the mines as too poor to pay the expenses of mining and milling will hereafter be brought to the surface.

Throughout the entire State of Nevada there are now fully 1,600 stamps at work. During the present season there will be fully 500 added to this number, mostly in the Reese River and Humboldt districts. This shows a decided increase in the mining business of the State, and affords the most indubitable evidence that mining, as a pursuit, is generally found profitable to those engaged in it throughout the State of Nevada.

During the past week we have heard of two important mining strikes near Gold Hill, one by the Jewel company, which is noticed at length by our Virginia City correspondent, and another by the Caledonia Tunnel company, which is fully detailed, editorially, in another column. As an evidence that the Gold Hill mines are yielding liberal returns to their owners, we have only to notice the following dividends which have been paid, the past month, by the incorporated companies in that district. The list here given is in addition to the numerous private, unincorporated companies, many of which are returning large amounts weekly to their fortunate proprietors, and does not include the companies located in Virginia City. The Gold Hill companies dividends for the past month are as follows:

The Belcher, Baldwin and Abernethy, consolidated as the Belcher, $17 per share in each, or $51 per share in the consolidated stock; the Petaluma Mill and Mining company of $5 per share; the Empire Mill and Mining company, $20 per share, and the Imperial, $10. There may be others also in that locality which we have overlooked.

REESE RIVER.

The total amount of bullion shipped from Austin, by Wells, Fargo & Co., during the month of June, was $73,328. It is said, on good authority, that before fall there will be at least three new mills erected in Mammoth district, chiefly by Eastern capital, which is now flowing into Reese River in large quantities—chiefly the result of the liberal policy adopted there of recognizing in their business transactions the legal currency of the country. A. Blatchley, a mining engineer of Austin, has just published a pamphlet of thirty-five pages, on the mineral resources of Reese River, which is said to be very comprehensive and truthful. He sets down the bullion yield for March last, about which time the report was made out, at $105,000, and says that not over 170 miners were engaged in taking it out, showing that the average yield per man for that month was over $600. The Deputy Recorder of Reese River district says that 5,342 claims have been recorded in the district since 1862—only ten per cent. of which are re-locations. We condense from the *Reveille* as follows:

Two lots, of about five tons each, of ore from the Liberty ledge, Antonio district, has been recently worked with a net profit over mining, crushing and hauling of $200 per ton. Such a mine ought to be valuable property.

In Yankee Blade district work has been resumed on the Maggie; excellent rock is being taken from the Whitlach, Maid of Atheus, St. Jo, and Revenue ledges, the latter claim belonging to the Confidence company. The Confidence mill is progressing rapidly. Active work is going on in the development of several other claims in this district.

Mr. Justis Francis, Superintendent of the Rough Diamond S. M. Company, has arrived from New York, and will proceed at once to developing the mine. The Rough Diamond lies in the vicinity of the Diana and Morgan & Muncey, and has been opened by an incline sufficiently to prove it to be a promising mine. The machinery for a large mill is already on the ground.

The Austin Pioneer company have a series of very valuable ledges, seven in number, sample lots from each of which have been worked at the Midas mill, with very satisfactory results. One of them yielded at the rate of $350 per ton.

Messrs. Paterson & Hutchinson are erecting a small two-stamp mill, near by the Eagle mill. The object of this miniature mill is to prospect several mines belonging to its enterprising proprietors.

The Hubbard claim has produced at the Midas mill a bar worth $1,206, from two and three-quarter tons of what is claimed to be average ore. Another lot yielded $250 per ton. The name of the Oregon mill has been changed to that of Manhattan, the controlling interest having been purchased by New York parties. The company is now having the machinery for a 30-stamp mill manufactured in San Francisco.

An engine and machinery for the Vineyard Company has arrived at the mine. This claim is located about half a mile from the Yankee Blade.

The principal claim-holders of the Diamond district have engaged Mr. Clayton, M. E., to visit that region and make a detailed report of it. J. Ross Browne will also accompany the party, for the purpose of making sketches of the most attractive points, etc. These descriptions and sketches will be sent to England, with the view of interesting English capital therein.

IONE DISTRICT.—The mines about Ione City are attracting considerable attention. Dr. Blatchley, the mining engineer above spoken of, has visited this district and pronounces it equal to any in Nevada. It is located about seventy miles southeast of Austin, and wood, water and grazing abound. We learn from the Nye County *News* that the Pioneer mill, erected by W. B. Ready & Co., is the only one now in operation. Several others are under way and in early contemplation. This mill has three Coleman pans and two roasting furnaces. They have quite recently made their first shipment. The New York and Ione company are taking out rock from the Swansey and DeGroot ledges, which they think will pay $500 per ton. The machinery for their mill is now on its way over the mountains. The Idaho claim is turning out some very rich rock. The Atlantic and Pacific company, at Union, ten miles east, owns twenty-two ledges and have a mill now on the road to the mine. Geo. W. Veatch is superintendent. The Turkish company have a fine ledge. Their mill has just been built at the Miners' Foundry in this city. The Knickerbocker company have made a rich strike in the Olive ledge, and have taken out a quantity of rock said to be fabulously rich—estimated at from $6,000 to $9,000 per ton. They are putting up a 20-stamp mill. Knickerhocker stock must be going up about this time.

The Pleades, one of the principal mines of this district, recently sent 3,761 pounds of rock to Austin, which yielded a nice little brick worth $517.79. They have an abundance of the same kind of ore left.

HUMBOLDT.

According to the *Register*, considerable activity is being manifested in the various mining districts of Humboldt.

In the Sierra district work on the Ne Plus Ultra goes on with excellent prospects. Sinking on the ledge fifteen feet, one ton of fine black sulphurets of silver was taken out. The ledge widens, and the mineral seems to increase as depth is gained.

The Monroe Series has been worked principally during the winter in a hand mortar. Two men made from $5 to $10 per day each, all winter. The company is now engaged taking out a quantity of rock for crushing at Fall's mill; and intends vigorously prosecuting the work. The Monroe pays mostly in gold.

J. T. Maclean has twelve men employed on the Yosemite mine, running a tunnel, which will strike the ledge 250 feet, and sinking an incline on the ledge to meet it, from which he is taking out very rich mineral. The company intends erecting a good mill at once.

Ten men are employed on the Chrysopolis mine, and are sinking on two ledges in the series—both well-defined; and sufficient ore is taken from the shaft of each to pay for sinking. It is the design of the company to have a mill running within ninety days.

The Dubuque, an extension of the Tallulah, under the superintendence of W. K. Parkinson, is vigorously prosecuting work. Fifty-eight pounds of rock from this mine worked by Torrey, at Fall's mill, paid at the rate of $120 per ton.

Mr. Torrey of Fall's mill is at work on the Gen. Grant claim. He is to have fifty tons of quartz for taking it out. The claim is on the Montana ledge, and Mr. Torrey thinks it is equal to the original.

ESMERALDA.

According to the Esmeralda *Union*, one of the richest pieces of ore ever seen in the State was recently taken from the Gibraltar mine, Columbus district. It was a square block, weighing about fifty pounds. The streaks of sulphurets, which almost entirely cover the freshly broken surface of the block, are completely checkered over with little globules and wires of pure native silver. It would be a most magnificent specimen to be placed in the mineral department of the forthcoming Exhibition in this city.

The Kearsarge mines still continue to attract much attention. Big stories are told by all returning prospectors, and as evidence of the truth of these reports they generally have with them no abundance of rich ore. Ore from these mines has been worked, by the ton, which has yielded as high as $930 per ton.

CALIFORNIA.

Mining in California never looked more encouraging than at the present time. The new diggings near the Summit, on the Henness Pass, are still attracting much attention. The copper mines of Calaveras continue to ship ore and copper matte in large quantities, and the evidence is unmistakable that we are soon to receive large and regular shipments of ore from the mines along the Colorado. We condense from the *Messenger* as follows:

SIERRA.—The Meadow Lake mines are creating considerable interest in this section at the present time. A large number of persons—miners, traders and others have gone thither to try their fortunes. These are the newly discovered mines, eight miles from Jackson's ranch, in the northern portion of Nevada county.

The Union company has struck their ledge again, three feet wide. The Twenty one company have received the machinery for their new mill. The Masonic company are in rich dirt, and quite a number of Sacramento capitalists are prospecting about the neighborhood with the view of investment.

It is reported that the Lawler ledge has been sold to Capt. Kidd, of Nevada, and other parties, who are expected soon to commence extensive operations. The prospects of mining property on the south side of the county look especially promising at the present time.

Saw Mill camp has become quite a town, in consequence of the improved appearance of the mines. The Monitor claim employs about forty men. The first washing, after two weeks run, realized $4,000. The claims at Howland Flat are paying better than at any previous time.

The Comet claims at Gardner's Point are paying well—a dividend was lately declared.

NEVADA.—According to the *Transcript*, J. J. Ott, Esq., has sold the Oriental and Lecompton ledge for the sum of $25,000 to an Eastern company. Mr. Fred. Miller, who has recently returned from the Atlantic States, is business agent. The company is composed of some wealthy men in New York, and they design investing $200,000 in Nevada county. The Lecompton ledge is one of a number belonging to Mr. Ott, and has always maintained the reputation of being very rich.

The Sneath & Clay mill and mine, recently purchased by an Eastern company, has been put in full operation.

The *Gazette* states that Messrs. Kidd & Tisdale are taking out of the Mohawk ledge, on Gold Flat, fifteen tons daily of splendid looking rock. An order has been sent to this city for machinery, and the proprietors will erect a mill as soon as it can be done. Work on the Star Spangled Banner ledge, also owned by Messrs. Kidd & Tisdale, is being vigorously prosecuted. This has been considered difficult rock to work; but Mr. Palmer engages to save $40 per ton from it.

The editor of the Grass Valley *Union* has seen another brick from the Lucky company's mine, weighing 241 ounces, the result of one week's run. "Lucky," indeed.

The Grass Valley *National* reports a rich strike in the Black ledge, on New York Hill. The rock shows an abundance of free gold, and from its nature gives the appearance of being a large ledge. The owners of the claim are William Watt, David Watt, Thomas Findley, A. E. Davis, Henry Scadden and Robert Jones.

The Coe company is reported to be doing exceedingly well, and the prediction is made that it will eventually prove one of the best paying mines in Nevada county. The machinery connected with the hoisting works is said to answer its purpose admirably. There is apparently no better management connected with any mine in the county.

The Ophir, one of the oldest of the Grass Valley mines, is looking exceedingly well at the present time. It is now under the superintendency of Mr. Joseph Powning, an experienced mine manager, who will doubtless accomplish all in the way of its development which can possibly be reached.

The placer and hydraulic diggings in the upper portion of this county are turning out remarkably well. The claims at the head waters of Fall creek are said to be paying at the rate of $18 a day to the hand. Neice & Mott's mill, at their cement claims at Brown's Hill, is now running with most gratifying success. Thirty-six stamps, in all, are now employed in crushing the cement deposits at this locality. The number, it is said, will be doubled during the present summer. This new plan of working this class of hydraulic diggings is found to work admirably, and will doubtless, ere long, be generally adopted in all hard cement, gravel diggings.

YUBA.—A renewed interest appears to be springing up at the Brown's Valley mines. According to the Marysville *Appeal*, a well defined ledge has been struck on the Sweet Vengeance Co.'s claims, at a depth of 250 feet. Their twenty-stamp mill is again in motion, with rock richer than ever, and from a five foot ledge.

The Yuba company have decided to procure the necessary machinery and go to work immediately. The Dannebroge is opening new drifts, and we will soon hear again from them. They also have, like the Jefferson, pay streaks crossing their claim at an oblique angle.

The Pennsylvania, it is thought, will soon get over their money difficulties, save their machinery and get to work again. It is supposed they are not over fifty feet from the big Jefferson pay streak, which when reached will probably put a new face upon this company's affairs.

The Jefferson's twelve stamps are daily crushing about twenty-five tons of quartz, and as the ledge is now from fifteen to eighteen feet in thickness, but eight men per day are required to supply the mill. As to the richness of the quartz, the dividends will speak for themselves.

AMADOR.—The new mill on the Cone ledge is working with most satisfactory results; ninety-six ounces of amalgam was taken from the plates after running five days. The battery was not disturbed.

Work on the Newton copper mine is being pushed vigorously. It will be but a short time till they will have the steam hoisting works in operation, when they expect to be able to ship a large amount of copper ore daily.

CALAVERAS.—The productive copper mines of Calaveras county are turning out more ore at the present time than at any former period. The last report from the Napoleon mine states that 1,550 sacks of ore were shipped the week previous. The monthly average of the mine is said to be about 250 tons of fifteen per cent. ore; while the Union mine is yielding 2,000 tons of seventeen and eighteen per cent. ore each month.

According to the *Chronicle*, extensive smelting works are now in progress of construction, under the superintendency of Mr. William B. West, at Campo Seco.

The Keystone mine is rapidly improving. The company will soon ship from four to five hundred tons of ore per month.

A very large and rich vein of copper was struck in a claim near Shafer's store, on the Stockton road, two weeks since.

The Scorpion claim is looking very well at present. The company have got a promising lead about ten feet in width, and will, it is believed, soon begin to ship ore.

Mining and Scientific Press.

It is Impossible for editors to know ALL the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides and the evidence of any error which may appear will be received in friendship and treated with respect.

American and Foreign Patents.—Letters Patent for Inventors can be secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past two years.

Favorable to Inventors.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

Payment in Advance.—This paper will not be sent to subscribers beyond the term paid for. The publishers well know that a good journal cannot be sustained on the credit system.

San Francisco:
Saturday Morning, July 29, 1865.

Removal.

The Office of the MINING AND SCIENTIFIC PRESS has been removed to the old printing stand known as Waters Bros. & Co., southwest corner of Clay and Sansome streets, opposite the Atlantic Hotel (being one block south of our former location), where we may now be found, with more commodious apartments and an extensive Job PRINTING OFFICE.

San Francisco, April 10th, 1865.

Canvassing Agents.

We would call attention to the following named agents of the MINING AND SCIENTIFIC PRESS as gentleman worthy of the countenance of any community which they may visit, and assistance rendered them in their efforts, by friends and old patrons, or our brethren of the PRESS, will be acknowledged as a personal favor to us:—

Mr. Robert Lattimore—Amador and Alpine counties and the State of Nevada.

Thos. Poyzer, of Grass Valley, for Nevada, Yuba and Sierra counties.

ACCIDENTS AT OIL WELLS.

We almost daily hear of accidents, quite unimportant in themselves, but causing the most serious inconvenience, and often great expense and delay, in the process of boring. Several of our California wells are now suffering delays and cost from such accidents. We have just read in an Eastern paper that a little thing of this kind has recently put a summary end to boring at one of the deepest wells in Titusville, Pennsylvania. A small chip of wood was dropped into this well and became jammed between the tools and the side of the well at a depth of some five hundred feet. All efforts at getting out the tools had been unsuccessful at the latest accounts, although several weeks had been employed in such endeavors.

Another accident of a similar character came near doing much damage at the Bartlet well, now being sunk in Humboldt county, in this State. It appears that a lighted match was accidentally or intentionally dropped into the well hole, and instantly the gas escaping therefrom ignited, causing an explosion equal to that occasioned by the explosion of a fire-arm, throwing the mud and dirt with great force full twenty feet in the air. The explosion caused considerable dirt to fall into the well sufficient to occupy the operators several hours to remove it. Fortunately no damage was done to the machinery.

Most of our readers will recollect the terrible scene which recently occurred at a well in Pennsylvania, where the escaping gas from a well accidentally took fire, destroying several lives and an immense amount of property in buildings, machinery and oil. Such repeated occurrences should serve as warnings for inducing greater caution in the employment of fire, especially a naked flame, about oil wells, and indeed in all the mechanical operations connected with such work.

Work on the Caledonia is being prosecuted with vigor. The Caledonia is about eight miles from Copperopolis.

ANCIENT SHIP-BUILDING.

Capt. G. F. Goble, of the British Navy, has recently brought to the notice of English engineers an elaborate series of working drawings for both *wood* and *iron* ship-building, copied from drawings found in the summer palace of the Emperor of China—a structure which was ransacked and destroyed during the late English war with China. These drawings have every appearance of being old—perhaps thousands of years of age. The London *Mining Journal* says that the construction of the vessel is in every way remarkable, especially considering the great antiquity claimed for it; the hull, masts, sails, screws, etc., being of a character equal to the most approved arrangement of the present time, or considerably in advance of them. Capt. Goble is seeking the co-operation of a few antiquarians and others interested in the subject, in order that a working model of the vessel may be built, and there appears to be no doubt that many very material advantages will be gained as compared with any ship at present afloat. Not only are the several portions of the ship itself, of a highly efficient character, described, but even the chain cables are apparently superior to those now in use, though totally different in construction. They are said to be capable of bearing a strain of 10,000 tons.

It may be mentioned, as a curious circumstance, in connection with the above, that the largest ocean steamships now afloat bear almost the proportions in length, breadth and depth, as those of Noah's Ark. The dimensions given for our largest steamers are: length, 322 feet; breadth of beam, 50 feet; depth, 28½ feet. The dimensions of the Ark were: length, 555 feet; breadth, 92 feet; depth, 55 feet. The Ark, therefore, was nearly twice the size in length and breadth of these vessels. Both had upper, middle and lower stories, or decks. Thus it appears that after all the experience in ship-building and ocean navigation of the forty-two centuries which have elapsed since the deluge, the engineers of the present day are not able to materially amend the form of build employed by our antediluvian predecessors, as exemplified in the recorded description of Noah's Ark.

WITHOUT A BLUSH OF SHAME, or any attempt to relieve the terrible disaster visited upon the passengers of the Golden Rule, the managers in this city of the "Opposition" line of steamers to the Atlantic again advertise to take passengers to New York, *via* Nicaragua, calling their's the quickest route, when it is well known that their average trips are not less than *thirty* days. One would suppose that the seemingly inevitable and vexatious delays of the transit across Nicaragua, and the numerous failures to connect at that point, would prompt the proprietors of this line to make some definite and reliable arrangements by which such objections might be obviated; but we hear of none, and are therefore led to the inevitable conclusion that the company have resolved to rely upon the credulity of the community, and that the future of the Nicaragua line is to be but a repetition of the past. Miners and others from the interior, as well as from this city, who contemplate a visit to the East, will do well to bear these facts in mind, and govern themselves accordingly.

QUICKSILVER.—The Solano *Press* states that the Knoxville Quicksilver Company are constantly shipping from Suisun a large quantity of quicksilver. The mines are said to be excellent property, although they do not make much noise in the papers.

LUMBER AND LEATHER.—Chicago is said to be the largest lumber market in the world. New York is the largest market for sole leather in the world—more being bought and sold there annually than is bought and sold in London, Liverpool and Paris combined.

SILVER IN COLORADO.—Silver mines have recently been discovered in Colorado, and are creating quite an excitement. They have quite appropriately and prettily named their new district and embryo city Argentine.

CALEDONIA TUNNEL AND MINING COMPANY.

The above company have recently struck a fine ledge, the ore of which looks very rich, being of excellent texture and filled with splendid sulphurets. The prospects of the company were never better, or in a more flourishing condition, and appearances indicate that after years of uninterrupted work, the owners will be rewarded for their perseverance, and receive back all assessments paid in tenfold. "Patient waiters are no losers."

We clip the above from the Virginia *Union* of Tuesday last. We have seen a lot of rock taken from the ledge at the point where this strike was made, and, judging from the sample shown, can fully endorse the opinion of its richness expressed by our cotemporary. The Caledonia Tunnel has been run a distance of 2,000 feet, passing entirely through, what is considered there, the Comstock ledge. The ledge was barren at the point where it was intersected by the tunnel, and the company pushed ahead quite a distance, hoping to find something beyond. They afterwards came back and ran a drift southward about 500 feet on the ledge and northward 200 feet, without finding anything of much value. The expenses at this point had footed up about $150,000. A short time since the Uncle Sam and Overman consolidated struck very rich rock in their south drift, and not far from the north line of the Caledonia company, which the claim adjoins. Encouraged by this prospect, the Caledonia company went back into their north drift, and after running a short distance toward the Uncle Sam, came upon this new strike, above alluded to by our cotemporary of the *Union*. We heartily congratulate the persevering proprietors of the Caledonia, and trust that their most sanguine anticipations may be more than realized.

We believe the fact has not yet been made public that the number of shares of this company have recently been reduced from 5,000 to 2,500 in number. The old stock has nearly all come in and new been issued instead. Parties interested should notice this change.

SILVER IN OREGON.—Silver has recently been discovered on Coleman's creek, a few miles above Camp Baker, Oregon. The manner of its discovery, as described by the *Sentinel*, was very singular, and confirms the old adage that most great discoveries are the fruit of accident. It seems that a lime kiln had lately been burned there, and on examination a nugget of pure silver, or something resembling it, weighing six ounces, was found in the bottom of the kiln. No clue has yet been obtained as to what particular kind of rock it was melted from.

ON THE LEAD AGAIN.—After running a long hard rock tunnel, the Union Company, at Wet Ravine, Sierra county, have come upon the main lode, which they find wider and richer than at any other point developed. On the 18th inst., after a single blast, $3,000 worth of specimens were gathered up. Mr. B. W. Barns, a member of the company, informs us that the work will now go on in earnest. The mill was expected to commence running on the 24th. Outsiders but faintly realize the immense importance of the undeveloped quartz resources of Sierra county.

COPPER PLATES IN MINING.—The use of copper in silver mining, in various forms, says the Virginia *Union*, appears to be coming in vogue in the State of Nevada. Several tons of copper plates were shipped to the Reese River sections a few days since. They were probably designed for use on the bottoms of amalgamating pans.

THE HIGHEST PLACER MINES.—Probably the most elevated placer mining locality on the globe is to be found at the head waters of Fall creek, in Nevada county. In May last, eight feet of snow had to be taken off the ground before sluicing operations could be commenced. Here diggings are said to be paying $18 per day to the hand.

THE Welsh miners are coming to America in great numbers, and the English papers think it augurs little good to the country.

Coal Mine Explosion in Pennsylvania—Five Men Killed.

A correspondent of the Pittsburg *Commercial*, writing from Steubenville, Penn., under date of June 6th, says:

A terrible accident occurred in one of the coal pits here yesterday morning. It appears that the miners had not been working since Wednesday of last week, and the fire in the furnace below, which is always kept there in order to create a circulation of air through the different parts of the mine, had not been attended to for two days, so that the gas had been accumulating during Saturday and Sunday.

Monday morning a man went down and is supposed to have just kindled the fire and started off into one of the entries with a common lamp in his hand, which no sooner came in contact with the gas than the fearful result was known above. The noise is described as resembling that made by a train of cars moving at a rapid rate. A shock was felt, which shook the building to its very foundation, and the gas from below came up with tremendous force, bringing along with it a shower of dust, slate, pieces of coal, and piling the underground cars on top of each other, then forcing the whole mass out of the mouth of the shaft, knocking and tearing everything in their way. Nine men, who had already gone down to resume their work on that morning, were buried.

The news was rapidly spread, and soon a crowd of citizens and brother-workmen were collected at the place of the disaster, eager to do something for the relief of those who might be living, and also to rescue the bodies of those in whom life was extinct. After many attempts and repeated failures, on account of the suffocating odors which affected those who went down, sometimes rendering them insensible, they succeeded yesterday in getting up six of the unfortunate ones. Two of them were already dead, two seriously injured, but the other two, strange to say, unhurt. The remaining three were exhumed to-day, all dead, of course. About three o'clock this afternoon the body of Mr. Cowan, who carried the lamp, was brought up, badly bruised and mutilated. Some two or three tons of slate had fallen upon him, and a part of the case belonging to his watch was found, bearing evidence that the rest of it had probably been melted.

It is seldom that accidents like the above occur where ordinary precaution is used. The presence of inflamable gases is always perceptible to the senses, and miners should be extremely cautious about going into mines with a naked flame when there is any reason to expect an excess of such gas. When it is found necessary to take a light into such places, a Davy lamp should always be employed. The same remarks are applicable to oil wells when there is a large discharge of gas. Accidents will continue to arise from such causes until miners learn to be more cautious.

LACE MADE BY CATERPILLARS.—A most extraordinary species of manufacture has been contrived by an officer of engineers, residing at Munich. It consists of lace and veils, with open patterns in them, made entirely by caterpillars. The following is the mode of proceeding adopted:

Having made paste of the leaves of the plant on which the species of caterpillar he employs feeds, he spreads it thinly over a stone or other flat substance of the required size. He then, with a camel's hair pencil dipped in olive oil, draws the pattern he wishes the insect to leave open. The stone is then placed in an inclined position, and a considerable number of caterpillars are placed at the bottom. A peculiar species is chosen, which spins a strong web; and the animals commence at the bottom, eating and spinning their way up to the top, carefully avoiding every part touched by the oil, but devouring every other part of the paste. The extreme light-ness of these veils, combined with their strength, is truly surpassing. One of them, measuring 27½ by 17 inches, weighed only a grain and a half, a degree of lightness which will appear more strongly by contrast with other fabrics. One square yard of the substance of which these veils are made weighed 4½ grains; whilst one square yard of silk gauze weighs 137 grains: and one square yard of the finest net weighs 262½ grains.

MRS. GEN. GAINES has gone down the Mississippi river with a retinue of lawyers to make another effort at New Orleans to gain possession of the immense estate left by her father. She has perseverance on her side at least.

RICH specimens of cinnabar are reported to have been recently found in the Volcano District, Nye county, Nevada.

THE MARIPOSA ESTATE.—It will he recollected that wc stated some time since, that the mauagement of the Mariposa estate had been placed in the hands of the Messrs. Dodge & Bros., a well known business firm of this city, expressing the utmost confidence that such an arrangement would result most satisfactorily to all parties concerued. The result appears to have realized our anticipatious. By the latest dates from New York, we notice that this stock has now an upward tendency in the market, and the affairs of the company are assuming a state most satisfactory to the stockholders. The note for $50,000, with interest in gold, due under the " Garrison Settlement," on the 20th of Juns, was promptly paid. It will he recollected that the arrangement with the Messrs. Dodge was upon a lease made to them under terms of which they were to pay off the California indebtedness, which, on the 27th of April last, amounted to $37,000, in addition to $66,000 due the workmen on the estate, making a total indebtedness of $113,000 in gold. This amount, it is confidently expected, will soon he materially reduced under the business-like and economical management of Messrs. Dodge & Bros. The placing of this large nud valuable property under ths management of political lawyers and speculators, who had oo acquaintance with mine management, has heen disastrous in the extreme; a result which must ever be entailed upon such policy wherever initiated. We trust its future will hs as prosperous as its past has heen disastrous.

B. F. BARKER'S CONCEALED DOOR SPRING.—This door spring was invented hy B. F. Barker, No. 36 Wehh street, San Francisco; patent applied for in April, 1865. It will he shown at the coming Fair of the Mechanics' Institute, in model and in full working size, as applied to doors. It is quite unlike auy other door spring in its application, and also in its working. The manner in which it is applied does not tend to weaken the door or tear it from its hinges, hut rather to keep it firm in its place, and prevent it from sagging. When the door is opeued to an angle of 45 degrees, ths spri g is nearly at its greatest expansion, so that on the last quarter of opening, the spring gradually loses its power upon the door, and the slightest obstruction will keep it open if desired. The door closes without any dependence on the momentum. The cam, or lever, attached to the hracket, causes the spring to work in a parallel line, aud its great length warrants it to work for years without relaxing in the least. This spriog may be applied to parlor or insidc doors, for its working is so easy and silent that a mere child can open the door. And last, hut not least, the door remains undefaced and without blemish, and the spring will work for years as perfectly as when put on. Most springs in use require great effort on account of increased strain on the last quarter of the opening of the doors; hut this spring has its greatest tension at ahout half way open, and gradually relaxed in shutting. The spring, after closing, still holds its grip and keeps the door snugly closed.

THE NORTH ALMADEN QUICKSILVER MINE.—Wc recently paid a visit to this company's mius, in company with Capt. Faul, the superintendent nnd one of the owners. The outcrop of the mins presents every evidence of the company being ahle to find a large deposit of mineral at an inconsiderable depth. They are now engaged in running a tunnel to strike it in depth, and nre also sinking a shaft for the same purpose. Quite a quantity of pay rock has already heen taken out. The mine is located on the Farnsworth Ranch, in a north-easterly direction from the New Almaden, and distant therefrom ahout ten milcs. There is plenty of fine water and timher upon the claim, and a plateau has been selected upou which to erect reduction works, furnaces, etc. A location has also heen selected for a town site, upon which hosiness lots will he presented to actual settlers. The mine has heen worked only a few weeks, but with Capt. Faul's large experience in quicksilver mining, he can hardly fail of producing a rich return to the proprietors associated with him, who are O. L. Craodell, C. D. Putuam, and George Winchell, of San Jose.

THE SANTA BARBARA METEOR AGAIN.

We have received the following letter from a well known citizen of Nevada, in relation to the Santa Barhara meteor. The letter was accompanied by a private note, in which the writer fixes the momeut of observation at thirty-five minutes past seven o'clock P. M., Austin time, by his watch, which might possibly have. been five or ten minutes out of the way. Mr. Rolfe thiuks that if the meteor had been noticed after dark it would havs afforded as much light as the full moon. He was sitting at the time on the outside seat witb the driver, and had a fine opportunity for noticing it. The observations of Mr. Rolfe nre very valuahle. We should like to hear from other observers, if there are any, who may have seen the meteor from any other point with sufficient distinctness to give us their point of observation, the direction in which it was seen, its angle of elevation, and thc apparent direction of its motiou. We subjoin Mr. Rolfe's letter:

NEVADA, July 25, 1864.

EDITORS MINING PRESS:—My attention was called, yesterday, to an article in your last issue, giving an account of the meteor seeu at Santa Barhara on the evening of the 12th instant, and the request for further informatiou as to the meteor seen at the samc timc by the stage passengers on the overland road. As I was the person who gave the information to the *Gazette* and *National*, of this county, I will endeavor to give the particulars you ask for. The point of observation was some twenty-eight or thirty miles east of Virginia City, on the overland road—perhaps twenty-five miles by an air line. The meteor was seen almost due south from that point. Its angle of elevation, as near as I can judge, was from twelve to fifteen degrees, and its motion was easterly, inclining a little towards the horizon. Its apparent magnitude was about the same as described by Dr. Jacksou; thnt is, of a six-pound cannon ball, and was as brilliant as the suu. It was visible from twenty to thirty seconds, moved very slowly, when it hroke into three or four pieces, the largest fragment apparently dropping on top of a mountaiu, and the smaller lagging hehind a few moments, and then disappearing. No stars were visible at the time, except the planet Jupiter. It left no train or illumination in its path, as noted hy the observers nt Santa Barhara; hut as it was seen at almost the same moment nt hoth places, I judge it to be the same meteor.

T. H. ROLFE.

SUDDEN DEATH.—We are pained to annouue that Mr. Wm. Fell died in this city on Thursday. He had heen sufferiug for a long time from chronic rheumatism, which, however, did not prevent his attending to business, and scarcely a week ago we met him ou the street. He was a native of Denmark and some fifty years of age, nnd as a faithful and efficient mining secretary, was well and favorahly known. From long hussiness connection with him, we can say truly, that a more prompt nnd honorahle business man it has never heeu our lot to meet.

GOOD PROSPECTS FOR OUR IRON MANUFACTURERS.—In Jauuary, 1864, the numher of miles of completed railroad in the Northern States was nearly 25,000, and in the Southern States about 9,000 miles. So much of the latter, however, has heen destroyed aud worn out, that it may be said nearly the whole must be renewed. This will for the next few years make a tremendous demand on the various manufactories of railway material, aud the capacities of Pennsylvania in this respect will he taxed to their utmost.

CAVE IN THE GOULD & CURRY.—A small cave of some fifteen or twenty tons of rock, occurred in the Gould & Curry mine on Monday last, at 2 P. M. Fortunately no one was at work except Mr. Cullen, one of the miners, who got his hand cut a little hy one of the falling timhers. He was not seriously hurt. Small caves are quite frequent in our mines, and it is a wonder that more people are not hurt than there is.—*Virginia Union.*

MONTANA.—A new offspring of the Republic, horn in the war, it is a sturdy man child, hearty and thriving. In an existence of only three years, it has gathered into its horders an earnest, working population of fifty thousand whites, who may be fairly presumed to he that indelatigable and energetic race who people our new Territories.

RICH MINES IN SIERRA COUNTY.—One of the claims in Alturas District, has yielded $150,000 this season, and various others from $20,000 to $10,000.

THE DEAD AND THE LIVING.—From a correspondent of the *Gazette*, of Augshurg, we learn that the pontifical expends, every year, in masses for souls in purgatory, 800,000 francs, while for the hudget of public iostruction it pays ouly 214,000 francs.

PITTSBURG has just fioished a perfect model of the famous rebel iron-clnd Merrimac, and also a monitor, as a contiubntion to the great sanitary fair at Chicago. The vessels, though of course hy no means equal in size to their prototypes, arc yet of good dimeusions, nnd furnished with machinery, guns, etc., complete.

CONVENIENT WATER GUAGE.—W. L. Bordich, engineer of the Sacramento Water Works, according to the *Bee* of that city, has arranged an apparatus by which, while in the engine room, he is notified when the tanks are full. A lend pipe extends from the top of the building to a box in the engine room. In this box there is a wheel carrying buckets made of tin. When the tanks are full the surplus water runs down the pipe and sets the wheel in motion. The revolution of the wheel causes a bell to strike, and the engineer knows it is time to stop the engine. This arrangement proves very serviceable, as it removes all excuse for permitting the tanks to overflow and drench the building.

How long Eve, the first woman, lived, we do not know. It is a curious fact that, in sacred history, the age, death and burial of only one woman, Snrah,, the wife of Abraham, is distinctly noted. Woman's age, ever since, appears not to have been a subject for history or discussion.

GOING TO BENICIA.—The Pacific Mail Company's steamer *Constitution* has gone to Benicia to lie up. The new steamer *Colorado* takes the berth at the Company's dock and will sail for Panama on the 3d proximo. This will be the first voyage of this fine vessel from San Francisco to Panama. She will be commanded by Captain Watkins.

The amount of war material now accumulated by Government, both of its own manufacture and captured from the rebels, is almost incredible. Speaking of guns in a wholesale way, an artillery officer lately intimated that the cannon, caissons, ambulances, wagons, etc., with their teams, would make a column reaching from New York to California.

QUICK RELAPSE INTO WILDERNESS.—The fact that wild game overruns Virginia proves how soon a country can fall back into its original wilderness when cultivation ceases. Deer and bear are reported to have reappeared in districts where they had not been seen for many years prior to the commencement of the war. Quails and rabbits literally swarm in the desolate settlements of Virginia.

A military novelty was seen near Fort-Lyon, recently, in a night parade of two divisions of the ninth corps, each man carrying a lighted candle in the muzzle of his musket. The sight was a curious and brilliant one.

ANTHONY sought happiness in love; Brutus in glory; Cæsar in dominion. The first found disgrace; the second, disgust; the last, ingratitude—and all, destruction.

THERE is a boy in an insane asylum at Hartford, hopelessly insane from a knowledge of the sufferings and consequent death of his father in the rebel prison at Andersonville.

THE war in Mexico continues with varying success. In a recent fight at Saltillo, Cortinas, who lately deserted and betrayed Maximilian, captured $50,000 in specie, and defeated the Imperialists.

THE old fashion of a "feast at a funeral" is not obsolete in Lebanon county, Pa. Over five hundred persons recently partook of dinner at a house in that vicinity from which that morning a corpse had been buried.

A DESERVED HONOR.—The Government gave its assent, at the termination of the grand military review held in Washington, that every regiment to be discharged should be allowed to go to the State and district in which it was raised, carrying its arms and colors with it, and be there mustered out.

A MAN named Knowlton spent six months in discovering a method for sawing ship-timber in a bended form, and another mode for boring granite, and sold a part for $10,000. During the same time a comrade taught a poodle dog to dance a jig on his hind legs. Brains have a value.

WESTFIELD, Mass., has for a long time been famous for the extent of its whip manufactories. The business was commenced there twenty years ago, and there are now forty-two factories.

PLEASANT THOUGHT FOR THE OLD.—"No bell, be it made ever so carefully and skilfully, sounds so well at first as it does after it has been hung some years. There is an atmospheric effect, a process of oxydization, very gradual, which goes on improving and mellowing the quality of tone as years advance."

THE Napa County *Reporter* has completed its ninth volume.

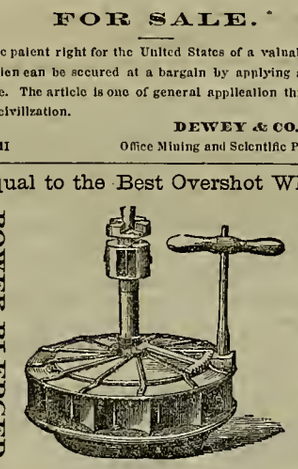
Equal to the Best Overshot Wheel



LEFFEL'S

AMERICAN DOUBLE TURBINE,

The DOUBLE TURBINES, so long expected, have arrived at last, and orders can now be filled. We have a large supply of the different sizes, from 10 inches to 30¼. That we may know the proper sized Wheel you require, measure your water in the following way: Take the width of the stream, the average depth, and the distance it flows in a minute.

All the Wheels already in use give universal satisfaction. For particulars send for a Circular.

The above Wheel will be exhibited during the Fair of the Mechanics' Institute, where all may see it and hear its merits explained. This Wheel is especially adapted to mining purposes. It is light, and can be easily packed into the mountains. Wheels weighing from 100 to 300 pounds will yield from 10 to 400 horse-power under a head of 25 or 30 feet. They are the cheapest wheel to set up known, as they are so arranged as to produce the greatest power possible from the water used.

Come and see them, or send for a Circular to

LEFFEL & MYERS.

Economy in Advertising.—The MINING AND SCIENTIFIC PRESS is the best and most ECONOMICAL mining advertising medium in this city. Our terms are less than ONE HALF the rates now charged by daily newspapers, and the mining community are beginning to appreciate our reasonable rates of advertising. The PRESS contains, proportionally, a larger amount of mining advertising than any other paper on the Pacific coast. Its character renders it the proper journal for the concentration of mining patronage.

Professional Cards.

Our Patent Agency.

The PATENT AGENCY of the MINING AND SCIENTIFIC PRESS has been signalized with remarkable success during the past two years. The importance to the inventive genius of this coast of a thorough and reliable agency for the solicitation of LETTERS PATENT from the United States and foreign Governments cannot be over-rated, and the Proprietors of the PRESS, feeling the responsibility which rests upon them, and the reward which must follow the faithful performance of their trusts, will take care to afford inventors every advantage to be secured to them through a competent and responsible agency upon this coast.

STING OF REPTILES.—In a paper addressed to the Academy of Sciences, Dr. Guyon lays down the principle that the action of the venom of serpents as well as scorpions is identical on man as on beasts, a proposition he confirms by several observations of his made both in the West Indies and in Algeria. Regarding its violence, he says there is a general belief abroad that it is much more powerful in summer than in winter; but this he does not consider well authenticated, and quotes against it the case of one Drake, an exhibitor of snakes, who having in the winter of 1827, at Rouen, handled a rattlesnake which he took to be dead while it was only benumbed by the cold, was bitten by it, and died in the course of nine hours. From a considerable number of observations, Dr. Guyon concludes that the intensity or power of the venom is less owing to difference of season than to the length of time it has been accumulating in the reservoir of the reptile, and the greatest accumulation necessarily occurs during winter, because the animal is in a torpid state, and does not take any food during that season.

So it was in the case of Drake, and so Dr. Guyon found in that of a horned viper, which had been given him at the caravanseral of Sidi-Makhlouf, Algeria. The reptile had been put into a bottle, which had since remained hermetically closed. It had been in there for six weeks without food, and without air, and looked quite dead, since it could not stir in the bottle, which it filled entirely. And yet, on opening the bottle, the doctor found the reptile perfectly sound, and saw it kill a large fowl instantaneously with its sting. Our author quotes another case, that of a scorpion, which had been kept in a bottle for a long time and on being released killed two large sparrows in less than a minute, and a pigeon in three hours. Dr. Guyon devotes some space to the symptoms which accompany the infliction of a bite by such reptiles; first, a violent pain at the moment of receiving the wound, then an unconquerable itching on the spot, then trembling, vomiting, difficulty of breathing, often accompanied with a cough, a dilation of the pupils, muscular contractions, tetanic symptoms, etc. —*Galignani's Messenger*

WE have now nine Territories waiting to be made into States. They are Wyoming, Arizona, Colorado, Montana, Nebraska, Idaho, New Mexico, Utah and Washington.

AN oil well near Vernon, Indiana, has caught fire, and burns with a blaze of about twelve feet in hight, accompanied with dull explosions at short intervals.

BLASTING

POWDER.

THE PACIFIC IRON WORKS,

First & Fremont Sts., between Mission & Howard, San Francisco.

The proprietors of the above Works invite the attention of all parties interested to their greatly improved and unequaled facilities for manufacturing Steam Engines and Boilers, both Marine and Stationary, of any required size and pattern, Quartz Mills, Amalgamating, Pumping and Hoisting machinery of the most approved construction, Flour, Saw and Sugar Mills, Water Wheels, &c., &c. Our pattern list is most complete and extensive, embracing the late improvements in all classes of machinery adapted to use on this coast. We would call especial attention to the fact that we have secured the exclusive right of manufacture for the Pacific Coast of the celebrated Greene Engine, conceded to be the most economical and perfect working Engine now in use. We are also exclusive manufacturers of the celebrated

Bryna Battery, Varney's Amalgamators and Separators, Ryerson's Superheated Steam Amalgamators and Rotary Crushers, Stone Breakers, &c. Orders respectfully solicited.

ANALYZING ORES.—Reduce the lump of ore supposed to contain metals of value to a very fine powder; care should be taken in the pulverization; it cannot be made too fine. Carefully weigh out the amount to be tested, place it in a Florence flask or any other glass vessel with a round bottom; add two or three times its bulk of nitric, and by means of a spirit lamp, or even a candle, evaporate to dryness; then add sufficient water—soft water should be used—to make solution. The lead, copper, zinc, and silver will be held in solution, while the tin, gold and platinum will settle to the bottom, the gold and platinum in the metallic state and the tin as an oxyd; pour off this clear solution after letting it settle, and from the residue the gold may be washed and saved by the use of quicksilver in the usual way, care being taken to guard against loss and waste.

Add to the solution sulphuric acid and the lead will be precipitated in the form of a sulphate, and may be removed after it fairly settles by pouring off the clear liquor, to which add hydro-chloric(muriatic)acid, and the silver will be precipitated in the form of a chloride. If then the value in copper is desired, immerse in the solution a slip of iron, having a clear bright surface, upon which all the copper will be precipitated in the metallic state and may be separated and weighed. Wash the chloride of silver well and dry on blotting paper, when the quantity of silver may be easily estimated without resorting to cupellation, by weighing the dry chloride, which contains in one hundred parts chlorine 24.67, silver 75 33.

MINING LAWS AND FORMS.

NOTICE TO MINERS.

THE UNDERSIGNED WILL SELL

MINING STOCK

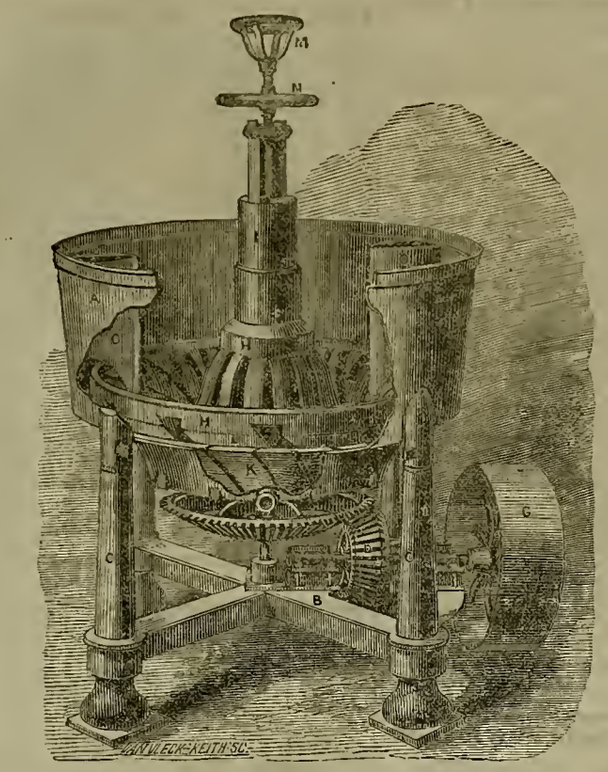
In Incorporated Companies and Unincorporated Mines, in San Francisco District and in El Dorado District, Arizona Territory. It is confidently asserted and believed by most practical miners that Arizona is the richest mining country in the world. Recent developments of these mines are now attracting the attention of capitalists, who have already erected several mills, and more are going there soon. Now is the time to invest to advantage, and obtain the rise that must soon follow. Those wishing to purchase soon can do so on most liberal terms, by calling on MR. RODNEY CLARK, 338 Montgomery street (room No. 11), San Francisco, or on H. C. SKINNER, San Jose, California.

N. B.—Freight all the way by water at a cost of 4¼ cents per pound.

H. C. SKINNER,

San Jose, California.

San Francisco, April 27, 1865. 17q10



THE

WHEELER & RANDALL

Grinder and Amalgamator.

In the engraving herewith exhibited, A represents the Rim of the Pan; B, Cross Frame; C, Legs; D, Gear; G, Driving Pulley; H, Muller; I, Driver; K, Dies; L, Shoes; M, Hand Wheel; N, Jam Nut, and O, Wings or Guide Plates.

The attention of the Public is respectfully called to these facts:

1st. That the Mechanical work accomplished by differently formed grinding plates, having the same diameter, weight, hardness, and revolving at the same velocity, is as follows, to wit:

The Mechanical Work of plane, circular plates of the usual ring form, is ninety-eight.....98

The Mechanical work of conical plates of the most approved form, is one hundred and ten.....110

The Mechanical work of Tractory-formed plates, as introduced in the invention of Wheeler & Randall, is one hundred and seventy-seven.....177

That is, the Tractory-formed grinding plates will reduce one hundred and seventy-seven tons of ore, the conical grinding plates one hundred and ten tons, and the plane circular grinding plates ninety-eight tons, to the same degree of fineness in the same time. Those using this invention certify that they thoroughly reduce five tons of ore, as it ordinarily comes from the wet battery, per day in each pan, four feet diameter, the muller making sixty-five revolutions per minute.

2d. That as a whole, the Wheeler & Randall Grinder and Amalgamator is one of the most simple, compact, substantial, convenient and efficient pans in use.

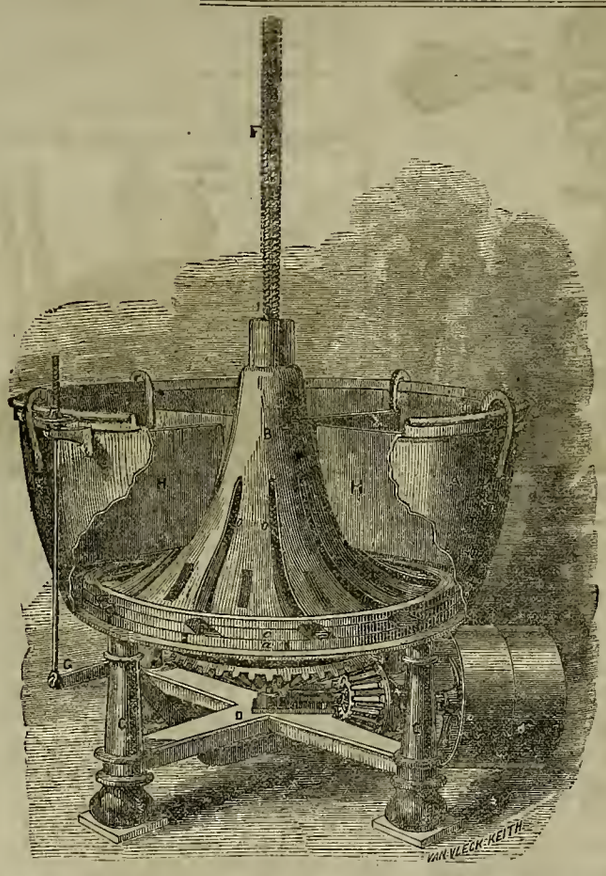
☞ Patent applied for.

MANUFACTURED AT

GOLDEN STATE IRON WORKS.....San Francisco.
UNION IRON WORKS..... "
MINERS' FOUNDRY..... "
SAN FRANCISCO FOUNDRY..... "
PRESCOTT & SCHEIDEL.....Marysville.
OREGON IRON WORKS.....Portland, Oregon.

WHEELER & RANDALL, Inventors.

SAN FRANCISCO, JUNE 13, 1865.



THE EXCELSIOR

GRINDER AND AMALGAMATOR.

In the engraving herewith presented, A represents the Rim of the Pan; B, Muller; C, Legs; D, Cross-Frame; E, Gearing; F, Screw; G, Lever; H, Dash-Boards; I, Key; *a*, Dies; *c*, Shoes, and *o*, Openings.

The relative grinding capacities of "The Excelsior" Grinder and Amalgamator, of the Flat Bottomed Pan, and of the Conical Pan *when properly constructed*, are respectively 177, 98 and 110.

That is, the respective mullers being of the same diameter, same weight, same hardness, and running at the same velocity, "The Excelsior Grinder and Amalgamator" will reduce one hundred and seventy-seven tons of ore, the Flat Bottomed Pan ninety-eight tons, and the Conical Pan one hundred and ten tons to the same degree of fineness in the same time.

The wear to the Shoes and Dies at their grinding surfaces in the Excelsior Grinder and Amalgamator, is perfectly uniform, thus securing evenness of reduction to the pulp, as well as steadiness of motion to the muller. Uniform wear of the grinding plates has been attained in no other than that of the Tractory form—nor can it be.

Another property of excellence in this machine is that the metal or substance to be amalgamated passes *direct* from the grinding surfaces into the quicksilver; thus excluding the possibility of its becoming coated with any foreign substances, after having been burnished. It is truthfully said "that the Tractory-formed Pan as a Grinder has no equal, and as an Amalgamator no superior."

As a whole, it is far superior to any other pan in use.

MANUFACTURED AT THE

Union Iron Works and Golden State Iron Works.

WHEELER & RANDALL, Inventors.

The undersigned having had several years of experience in practical quartz mining operations, will ever take great pleasure in furnishing parties interested in mining and machinery any desired information which they may possess.

FOR SALE BY

S. F. BUTTERWORTH,

Northwest cor. Battery and California sts.

v9-19 SAN FRANCISCO.

SAVE YOUR BOILERS AND FUEL.

ONE-EIGHTH OF AN INCH OF DEPOSIT ON THE fire surface of a boiler takes THIRTY PER CENT. of the steam generating power from that boiler, and, of course, wastes thirty per cent. of the fuel; and, what is a greater misfortune, it keeps the water from the plates and flues, causing them to scorch, blister and burn, destroying the boiler, and too often human lives.

I Have a Compound For Sale

That I have used with complete success in every instance, and without delaying the running of machinery, or injuring the boilers in any manner, and at a cost of five dollars the boilers can be made as clean as when they were new.

Let it be Known.—When any of our readers respond (by letters of inquiry or by the purchase of articles) to advertisements found in our columns, they will confer a favor, not only upon us, but upon this advertiser, by mentioning the fact of having seen the notice in our paper

GOOD MINING.—McCall, a miner on Dog Creek, a tributary of the Sacramento, some forty miles above Shasta, says the *Courier*, struck into a gulch last Spring, just by way of amusing himself, and after a little digging, found himself amused by the picking up of a lump of virgin gold weighing thirteen and one-quarter pounds. Looking upon it as rather a pleasant prospect, he continued the pleasant recreation and took out another piece worth $324, another $135, another $124, another $124,50, another $85, another $74, another $68, another $77, another $30.50. His aggregate receipts for the Spring, and until the water dried up, amounted to $6,000.

DODGE'S DIRT MOVER.—This new apparatus is in successfull opration near Allison's Ranch. The Grass Valley *National* says it is demonstrating its power every day, and the public may as well make up their mind to recognize it as one of the most useful inventions of the age. It will supersede scrapers as inevitable as sail vessels are superseded by steamers.

Pacific Mail Steamship Co.

The following Steamships will be dispatched on the following named days.

August 3d—COLORADO.....Capt. ——

August 18th—SACRAMENTO.....Capt. E. S. Farnsworth

From Folsom street Wharf

At 11 o'clock A. M., punctually to the hour,

For Panama.

Passengers will be conveyed from Panama to Aspinwall by the Panama Railroad Company, and from Aspinwall to New York by the Atlantic and Pacific Steamship Company.

A Baggage Master will be sent through each trip.

Cabin passengers will be berthed for Atlantic steamer.

ATTENTION, MINERS!

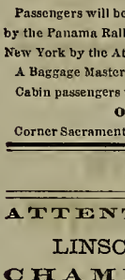
LINSCOTT'S PATENT

CHAMBER DRILL.

Great Improving in Blasting.

W. B. LAKE

Has taken the sole agency for the manufacture and sale upon the Pacific Coast of this valuable article, the object of which is to cut a chamber at the bottom of an ordinary drill-hole (as will be understood on reference to explanation of cut), giving more than double the effect in blasting.



D is the shaft of drill, forty-five inches in length. B represents the cutters extended after a blow has been given. The lower portion of B is a guide plate ¾ inch thick, holding the cutters in place and allowing them to glide in and out freely, the surface of the rock preventing their falling out and securing their return. When closed the edges of the cutters protrude about 1.16 inch only. As the drill descends the force slide A strikes the bottom of the hole and a slight blow drives its wedged shaped head, C, upward, forcing the cutters upward and outward by double acting wedge power. Face of the cutters 1¾ inches in length, diamond edged. There are but four pieces in all, two of which, the cutters, are detached.

Price of one drill with two sets of cutters, $35. Extra cutters, $5 per set.

Persons wishing further information about the working of this labor and money saving article, will please send for circulars containing full particulars, which will be furnished gratuitously upon addressing W. B. LAKE, General Purchasing and Advertising Agent, Room 28 Government House, San Francisco. 2v11

HANSCOM'S CRUSHERS,

Made in sizes suitable for Breaking Quartz for Batteries; Rock for macadamizing or concrete; Copper Ore for sacking, sampling, or concentrating; also, for crushing Quartz for Arastras and Grinders. The small sizes make a most efficient Crusher for Prospectors, and are arranged to be run by Hand, Horse, Water, or Steam Power. For further information address W. W. HANSCOM.

1 Golden State Iron Works, San Francisco.

THE HAMMER QUARTZ MILL.

[PATENT APPLIED FOR.]

This Machine is now complete and ready for sale. In constructing it, our aim has been to produce a light, cheap and economical Crusher—one adapted to mining on a small as well as on a large scale.

The elementary principle on which it operates is that of the stamp—the only one really reliable and economical.

But the stamp has many serious disadvantages, among which are its great weight and small velocity; the great power required to run it; difficulty in feeding properly; imperfect discharge, and the necessity of crushing wet, or the annoyance from dust in crushing dry.

All these difficulties are obviated in our machine, and the percussive blow of the stamp retained, with the further advantage of its being a drawing or grinding one.

We give to our hammers such absolute or relative weight and velocity as we choose—just such as to effect their purpose and no more—thus securing the qualities of the natural hammer blow.

The feed is self-adjusting and uniform, and as fast as the ore reaches the required degree of fineness (which depends upon the fineness of the screen or sieve used), it is instantly discharged, so that there is no packing of the ore under the hammers.

The mill crushes dry, with no more dust than that incident to feeding, which is trifling.

As the only support of the mortar is a single post set into the ground, the machine can be put in place at slight expense.

The size now being built weighs about 1,800 pounds complete; the heaviest piece not weighing over 275 pounds. It is driven by half a horse-power, and crushes from three to ten tons per day of twenty-four hours per day, according to the character of the rock and the fineness to which it is reduced.

PRICE,.....$800.

Larger ones will be furnished if desired.

We invite an inspection of the Mill now in operation adjoining the Foundry of DEVOE, DINSMORE & CO., on Fremont street, between Market and Mission, San Francisco.

Office, No. 11 Court Block, San Francisco, Cal.

21v10 **RIX & LOGAN.**

ATWOOD'S

Self-Regulating Windmill.

This Windmill is the most perfect self-regulator yet invented, and is capable of being adjusted to any desired speed. Manufactured at

232 Mission Street, North side, below Beale,

SAN FRANCISCO.

N. B.—We also manufacture DICKERSON'S SELF-REGULATING MILLS; also, Rotary and Stationary Mills of different styles and prices, varying from $50 to $500 each; also round and square Water Tanks made to order.

222 Mission street, below Beale. 5

HUNT'S

IMPROVED WIND-MILL.

THIS WIND-MILL IS RAPIDLY taking the place of all other Mills on the Pacific Coast. These Mills are so simple in their construction, that when once built, they can be put in order by almost any person; and when once in order they will run for years without repairs.

Prices, from $50 to $1,000.

ROUND AND SQUARE WATER TANKS BUILT TO ORDER.

HUNT'S PUMPS

Are admitted to be the best in the Market for Wind Mills, being built expressly for that purpose. They can be set, and taken apart with a common wrench, and are very easily repaired.

HUNT'S ENDLESS CHAIN

HORSE POWER

For Sawing Wood.

ALSO, THE

Self-Regulating Horse Power

Is so arranged as to give a steady motion, and is calculated to be used for turning Wood, Iron or Brass, also for Scroll or Circular Sawing, and is fully equal to Steam for any light work. The above Machines are built of the best materials, and made as Durable as Wood and Iron will make them.

ALL WORK WARRANTED.

☞ For further Particulars see small circulars. ☜

E. O. HUNT,

No. 23 Second Street, and 108 & 112 Jessie Street, San Francisco. 26-3m

HUNT'S PATENT

Circular Sweep Horse-Powers,

For running Churns, Washing Machines, Grindstones, pumping water, sawing wood, and other light machinery. Price, $100, at the Factory.

HUNT'S PATENT SELF-REGULATING TREAD HORSE-POWER is superior to any machine of the kind in the market. Price, with Governor, all complete to set to work, at the Factory, $300. Manufactured by

E. O. HUNT,

7v10 128 Second street, San Francisco.

SALMON'S

PROPELLER AMALGAMATOR.

The proprietors and inventors of this machine, after fourteen years of practical experience in mining in California and Nevada Territory, and having a thorough knowledge of the wants of Miners and Mill men, have succeeded in making an Amalgamator, which, for the purposes intended, far surpasses any other yet presented to the public, and which can be furnished at less than one-half of the expense of any other Amalgamator, now in use, besides requiring less labor to clean and keep it in running order. The Amalgamator is simple in its construction, consisting of a pan or tub constructed of wood and adapted to either a Stone or Iron bottom. Opposite each other, and on the inside of the tub, are two flanges, from two to four inches broad, reaching from the top to near the bottom, with room for the mullers to pass under. These flanges are for the purpose of preventing the pulp from forming a circular current, and together with a number of wings placed like a screw propeller on the muller-shaft, force a current continually on the quicksilver at the bottom and under the grinding surface of the mullers. This peculiarity of propeller-screw and side wings, in combination with a deep tub, are what the proprietors claim as new and for which a patent has been applied for. The undersigned are now manufacturing three different sizes of this machine, and the attention of the public is respectfully called to the following results obtained, from the working of Rouse River rock, by this amalgamator, and assayed by Miller & Lumbaum, at Austin, Nevada:

No.	Fine		No.	Fine
Assay.....250	943	Assay.....300		990
Assay.....288	941	Assay for Chaman		980
Assay.....286	940	Assay Water Rock		966
Assay.....291	950	Assay Water Rock		998
Assay.....	.....	St. Helena Ledge, W. D.		966

These, including a hundred other batches, were all worked to within fifteen per cent., and some to within ten per cent., of the assay. Parties interested will find it to their advantage to call and see the above machine in operation. Manufactured at the San Francisco Foundry, San Francisco, California, by

J. & W. C. SALMON,

To whom all orders should be addressed. 15

TO QUARTZ MINERS.

Hinkle's Centrifugal Pulverizer and Amalgamator!

THE ATTENTION OF MINERS IS RESPECTFULLY requested to HINKLE'S CENTRIFUGAL PULVERIZER AND AMALGAMATOR, now manufactured and to be seen in operation at the NOVELTY IRON WORKS of Mr. E. T. Steen, Nos. 37 & 39 Fremont street, between Market and Mission streets.

This machine is the best in the State for the purpose of Pulverizing and Amalgamating ORES. The whole machine, made entirely of Iron, will not exceed One Ton, and no piece of it will exceed 200 pounds, which makes it very convenient for transportation to remote districts. It will work Two Tons of Rock per day.

Mr. Hanson, who is running one of the machines, is an experienced Amalgamator, and will receive Ores at the above named place, and extract the metals and furnish assays for all persons wishing the same. The Subscriber manufactures a HAND MACHINE for Miners engaged in prospecting, which will work 60 pounds of ROCK at a time, and which will weigh about 175 pounds.

The Pulverizer and Amalgamator works Rock of the size of a grain of corn to an impalpable powder. Apply to

PHILIP HINKLE,

At the Novelty Iron Works, Nos. 37 & 39 Fremont street. 16-1m

BAUX & GUIOD'S

Separator & Amalgamator

Is the most important improvement in mining machinery ever introduced. It was awarded the FIRST PREMIUM at the San Francisco Mechanics' Fair for 1864, where it proved itself to be the best Separator and Amalgamator among all the competitors. Constructed on principles which combine SCIENTIFIC KNOWLEDGE WITH PRACTICAL EXPERIENCE, these Pans extract more gold and silver from their ores than any others in use, as a few hours trial will demonstrate. Mill men will find it to their advantage to employ these pans as Separators, in addition to the ordinary Amalgators now in use, and to re-work their old tailings.

The cost of these pans is inconsiderable, and their structure is such that they can be readily separated in parts convenient for packing on mules. Among the many advantages possessed by BAUX & GUIOD'S Pan, are the following: The trifling cost for attendance; Its small cost; Its portability; The large quantity of pulp it can operate upon in a given time; It may be worked even weeks without stopping, as it is constructed to work continuously; The complete thoroughness of the separation of the rock from the metals and the trifling power required to work them; They can be attached to any ordinary crushing apparatus.

Lapidaries' refuse, Refiners' ashes, Jewelers' sweepings, purchased or worked for a percentage. Ores and tailings worked or assayed at reasonable rates.

Manufactured at the Vulcan Iron Works, Miners' Foundry and San Francisco Foundry, San Francisco, and at Hengh & Thom's Foundry, Nevada City.

For further particulars, or to see this Pan in operation, call on or address

J. B. BAUX,

Fremont Street, near Mission, adjoining the San Francisco Iron Works, San Francisco. 4v8

FARRAND'S

Oscillating Amalgamator,

RECEIVED THE

ONLY PREMIUM

AWARDED FOR AMALGAMATORS

At the Recent Industrial Fair

OF THE

Mechanics' Institute of San Francisco.

Committee of Awards.

O. BELDEN,	W. T. GARRATT,	H. P. WAKELEE,
O. GORI,	GEO. JOHNSON,	C. M. RADCLIFF.

This Premium Amalgamator was placed on trial, at the Mechanics' Pavilion, with the Varney, Wheeler & Randall, and Hepburn & Peterson Pan, each working eight hundred pounds of crushed rock.

This Unrivaled Amalgamator possesses many advantages over all others now in use.

1st. It is capable of doing double the amount of work of the ordinary Pans, at a saving of more than one-half of the power.

2d. It reduces the pulp finer, thereby producing a better result.

3d. It requires less quicksilver by one-half at a charge, whilst the loss by trituration is comparatively nothing.

4th. As an Amalgamator of gold contained in sulphurets as also for very fine or flour gold, it has no equal.

5th. This Amalgamator involves no complicated machinery, and is less liable to get out of order than any of the pans.

Manufactured at the MINERS' FOUNDRY.

W. D. FARRAND, Inventor,

R. L. OGDEN, Agent, SAN FRANCISCO.

S. E. corner Montgomery and California streets.

19v9

NOTICE TO MINERS.

NEW QUARTZ MILL.

THE ATTENTION OF ALL ENGAGED IN MINING IS called to Fauchery's Improved Mining Machines, consisting of his celebrated Turbine Water Wheel, which took the First Premium at the Mechanics' Fair at San Francisco for 1864; his Crocodile Quartz Crusher; his Pulverizer; and his Improved Freiberg Amalgamating Barrel; altogether forming the most complete and effective Quartz Reducing and Amalgamating Mill now in use. This mill can be put up at less cost, run with less power, and accomplish more work, than any other now in use.

B. Fauchery and F. Genard

Having established a Quartz Mill and Metallurgical Works, are now prepared to crush, roast, amalgamate, assort, cupelate, and give correct analysis of ores. We are also prepared to give our attention to the building and constructing of Quartz Mills and Furnaces, and give directions for working Mines; and also to instruct persons in all branches appertaining to Mining Works, at No. 23 Fremont street, near Market, Railroad Foundry building.

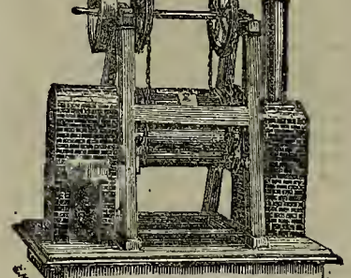
F. GENARD, **B. FAUCHERY,**

Metallurgist. **Engineer,**

24v9

WM. BRUCKNER'S

Furnace for Roasting Ores.



Now in Operation at 416 Market street.

This Furnace, which is portable, and can be carried on muleback, undertakes to roast without employing any labor whatever for the operation of stirring, which is accomplished by machinery that may be driven by steam or any other motor. It consists of an iron cylinder, which, being suspended by chains, in rotating mixes and stirs the ore, by an internal apparatus, quicker and more perfectly than can be done in any other furnace hitherto known in metallurgy. It can be applied to any kind of ore, and the rapidity and perfectedness of its operation, the great saving in fuel, and the entire saving of the labor usually required for stirring the ore, together with the small cost of constructing it, renders this furnace a most

Economical and Practical Invention.

The Furnace may be had of two sizes—one being nine feet in length and holding fourteen hundred pounds, and the other six feet in length, and holding eight hundred pounds. One horse power is required to drive the machinery of the larger sized furnace, and three-fourths of a horse-power for the smaller size. Parties wishing to erect such furnaces will please communicate to

W. BRUCKNER,

5v10 No. 416 Market street, San Francisco.

BLAKE'S

QUARTZ BREAKER

Is now extensively used for breaking hard masses of

Quartz or Ores

To a size suitable for stamps. These machines are patented, and are in practical operation in

CALIFORNIA, AUSTRALIA,
WASHOE,
ENGLAND, FRANCE,
— AND —
THE ATLANTIC STATES.

These Machines, or circulars containing further information regarding them, may be obtained of the undersigned. Address,

BLAKE & TYLER,

Box 2077 San Francisco Post Office.

CHAS. T. BLAKE,	E. TYLER,	WM. P. BLAKE,
Idaho City.	Michigan Bluff.	San Francisco.

4v10

VARNEY'S

PATENT AMALGAMATOR.

These Machines Stand Unrivaled.

For rapidly pulverizing and amalgamating ores, they have no equal. No effort has been or will be, spared to have them constructed in the most perfect manner, and of the great number now in operation, not one has ever required repairs. The constant and increasing demand for them is sufficient evidence of their merits.

They are constructed so as to apply steam directly into the pulp, or with steam bottoms, as desired.

This Amalgamator Operates as Follows:

The pan being filled, the motion of the muller forces the pulp to the center, where it is drawn down through the aperture and between the grinding surfaces. Thence it is thrown to the periphery into the quicksilver. The curved plates again draw it to the center, where it passes down, and to the circumference as before. Thus it is constantly passing in a regular flow between the grinding surfaces and into the quicksilver, until the ore is reduced to an impalpable powder, and the metal amalgamated.

Setlers made on the same principle excel all others.—They bring the pulp so constantly and perfectly in contact with quicksilver, that the particles are rapidly and completely absorbed.

Mill men are invited to examine these pans and setlers for themselves, at the **PACIFIC FOUNDRY,**

1v10 San Francisco.

Hepburn & Peterson's

AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

☞ This Amalgamator may be seen in operation at the European Metallurgical Works, Bryant St. bet. 3d and 4th.

[Illustrated in the Mining and Scientific Press, April 9th, 1864.]

NOTICE OF APPLICATION OF MARRIED WOMAN TO become a Sole Trader.—Notice is hereby given, that JANE C. SMITH, of the city and county of San Francisco, intends to make an application to the District Court of the Fifteenth Judicial District of the State of California, in and for the city and county of San Francisco, on the twenty-ninth day of July, A. D. 1865, for an order of said Court, permitting her to carry on business in her own name and on her own account, pursuant to an act of the Legislature of the State of California, passed April 12th, 1852, entitled "An Act to authorize married women to transact business in their own name," and of the Act amendatory and supplementary thereto, passed April 18th, 1862. The business she intends to carry on is that of the purchase and sale, leasing and mortgaging of real estate, the cultivation of lands, and all matters therewith, or with either of them connected, and of a general trader, in the city and county of San Francisco and the county of Contra Costa.

EUROPEAN METALLURGICAL WORKS,

—AND—

Practical Mining School,

Bryant Street, Between Third and Fourth,

SAN FRANCISCO.

THE Proprietors are at all times prepared to work or test Ores sent to this establishment—either in large or small quantities—by such process as may be found best adapted to their chemical character, after a careful analysis has been made. Test lots of Ore adapted to the smelting process attended to. Sulphuret, pyritous, and the (so-called) "rebellious ores," are having especial attention paid to their successful treatment. Assaying in the humid and dry way. Also, refining by cupellation, done at moderate rates.

PRACTICAL MINING SCHOOL.

The proprietors—encouraged by numerous applications from gentlemen desirous of pursuing the study of practical metallurgy—have concluded to admit parties on reasonable terms. Having in their Mill all the necessary appliances for crushing, roasting, amalgamating, smelting, refining and assaying, as also a well extended Laboratory for the analysis of Ores and Minerals, a good opportunity is here offered to acquire a sound practical knowledge of the business.

S. P. KIMBALL, J. R. MURPHY.

Drs. Whitcomb & Dyer, DENTISTS,

[Successors to W. H. Irwin.]

No. 205 Third Street, near Howard,
v9 SAN FRANCISCO.

MR. LINCOLN'S FAVORITE POEM.—Quite a little discussion took place recently in this city, with regard to the authorship of a certain very fine piece of poetry, which was a great favorite with Mr. Lincoln, Its authorship was claimed for him by the *Flag*, of this city. The Boston *Commonwealth* says it was written by William Knox, a poet of cousiderable talent in Edinburg, Scotland. It was first published in 1825. —*Mining and Scientific Press.*

The poem to which the PRESS refers is headed, "Oh, why should the spirit of mortals be proud." It was written by William Knox, and may be found in a collection entitled "The Sacred Poets of England and America," edited by Rufus W. Griswold. Knox was a man of promise, but died at the age of thirty-six, in Edinburg, in 1825. The following verse, which should be the seventh, is omitted from the verses, as published in the papers:

"The saint who enjoyed the communion of Heaven,
The sinner who dared to remain unforgiven,
The wise and the foolish, the guilty and just,
Have quietly mingled their bones in the dust."
—*Morning Call.*

THE angelic of our race die early. Precious gems are not for lasting fame; they but perfume the temple and expire.

KELLOG CREEK PETROLEUM AND MINING COMPANY.

INCORPORATED JULY 11TH, 1865,

Under the Laws of the State of California.

NO. SHARES.....10,000

Par Value.....$50 00

W. F. BRANDRETH.....President
J. M. BUFFINGTON.....Secretary and Treasurer

OFFICE—Room No. 10 Government House, corner of Sansome and Washington Sts., San Francisco.

The claims of this Company consists of SIX HUNDRED AND FORTY (640) ACRES, situated on Kellog Creek, in the Marsh Creek Mining District, Contra Costa county, Cal.

One thousand (1,000) shares of the contingent fund is offered at the low price of ONE ($1.00) DOLLAR per share, full paid, all the stock being unassessable. All who wish to purchase, or make any enquiry concerning the Company, will please call on the Secretary,

J. M. BUFFINGTON,
2v11 Corner of Sansome and Washington streets.

OIL WELL BORING.

J. SEVENOAKS,

Contractor

For Well Boring and Erecting all kinds of Machinery connected therewith.

Having had extensive experience in boring for oil in Pennsylvania, Canada and elsewhere, I feel confident of being able to give entire satisfaction. Persons desirous of making contracts as above, or wishing information with regard to oil indications, etc., will please address me at the office of the "Mining and Scientific Press," San Francisco, or to my personal address, Santa Cruz, Cal. 2v11

"Say, why should man for thirst be given
If not for wine bestowed by Heaven
To quench such drought as mine?
Without it, I'm a fish on land,
A barren heap of parching sand—
Then give me joyous wine."—*Trinklied.*

Delicacy of flavor, exhilaration without intoxication, and every other desirable property belonging to the rightly fermented Juice of the Grape, are to be found in the "Gerke Wine," from the celebrated Bosquejo Vineyard, Tehama county.

There is no wine produced in California that can bear comparison with this, and it would be difficult to find a European wine, of the same class, that can surpass it.

The vintage of 1862 is now offered for sale, in quantities to suit, by the Agent of the vineyard,

A. S. LOWNDES,

Basement of the New York Hotel, southwest corner Battery and Commercial streets, San Francisco. 20v10-qy

And in accordance with law and an order of the Board of Trustees, made on the 5th day of June, 1865, so many shares of each parcel of said stock as may be necessary will be sold, at public auction, at the office of Edwards, Olney & Co., No. 626 Montgomery street, San Francisco, Cal., on the 7th day of August, 1865, at the hour of 2 o'clock P. M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

J. WARREN CLARK, Secretary.
Office, 410 Montgomery street, San Francisco. jy22

POSTPONEMENT.—The above sale is hereby postponed until August 14th, 1865, at the same hour and place. By order of the Board of Trustees.

jy29 J. WARREN CLARK, Secretary.

Office of the Globe Gold and Silver Mining Company, San Francisco.—Location: Monitor Mining District, Alpine county, California.

NOTICE.—There will be an Annual Meeting of the stockholders of the Globe Gold and Silver Mining Company, at the office of said Company, 410 Montgomery street, in the city and county of San Francisco, on the 21st day of August, 1865, at 2 o'clock P. M., for the purpose of electing Trustees and for the transaction of such other business as may be brought before the stockholders.

LEVI MILLER, President.
WM. H. A. ATI, }
J. S. POWERS, } Trustees.
jy22-4w

George Washington Gold and Silver Mining Company, Silver Mountain District, Alpine county, Cal.

ASSESSMENT No. 6.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 10th day of July, 1865, an assessment of one ($1) dollar per share was levied upon the capital stock of said Company, payable immediately, in United States gold and silver coin, to the Secretary, or to S. A. HAWKINS, Superintendent, at Silver Mountain.

Any stock upon which said assessment shall remain unpaid on Saturday, the 12th day of August, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 26th day of August, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

W. D. ROOT, Secretary.
Office, 410 Montgomery street, San Francisco. jy15

Good Hope Gold and Silver Mining Company, Alpine District, Alpine County, Cal.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 10th day of July, 1865, an Assessment of fifty cents per share was levied upon the Capital Stock of said Company, payable on or before the 7th day of August, 1865, in United States gold and silver coin, to the Secretary, at his office, or to H. MORRIS, in Markleeville. [*Delinquents will be held for accruing costs after that date.*]

Any stock upon which said Assessment shall remain unpaid on Saturday, the 12th day of August, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 26th day of August, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

PRESTON MORRIS, Secretary.
Office, 526 Montgomery street, San Francisco. jy15

Hatleck Gold and Silver Mining Company— Location of Works: Great Mogul Mining District, county of Alpine, State of California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 5th day of July, 1865, an assessment of fifty (50) cents per share was levied upon the capital stock of said Company, payable immediately, in United States gold coin, to the Secretary, at the office of the Company, No. 311 Commercial street, San Francisco, or to M. SCOTT, Mogul, Alpine county, Cal.

Any stock upon which said assessment shall remain unpaid on the 12th day of August, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on the 26th day of August, 1865, to pay the delinquent assessment, together with the costs of advertising and expenses of the sale.

H. B. FORESTER, Secretary.
Office, 311 Commercial street, San Francisco. jy15

Honest Miner Gold and Silver Mining Company, Reese River Mining District, Lander Co., Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 18th day of July, 1865, an assessment (No. 5) of fifty cents per share was levied on the 22d day of July, 1865, upon the capital stock of said Company, payable immediately, in gold coin of the United States, to the Secretary, at his office, No. 223 Front street, San Francisco, Cal.

Any stock upon which said assessment shall remain unpaid on Saturday, the 26th day of August, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on the 12th day of September, 1865, at 3 o'clock P. M., to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

J. A. DRINKHOUSE, Secretary.
Office, 223 Front street, San Francisco, Cal. jy29

Jewett Gold and Silver Mining Company.— Location of Works, at Gold Hill, Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 19th day of July, 1865, an assessment of one dollar per share was levied upon the assessable capital stock of said Company, payable on the 22d day of July, 1865, in United States gold coin, to the Secretary, at the office of the Company, 509 Clay street, San Francisco.

Any stock upon which said assessment shall remain unpaid on Saturday, the 19th day of August, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 2d day of September, 1865, to pay the delinquent assessment, together with costs of advertising and exponses of sale. By order of the Board of Trustees.

O. M. BURNHAM, Secretary *pro tem.*
Office, 509 Clay street, San Francisco. jy22

La Victoire Copper Mining Company, of Hunter's Valley, Mariposa county, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 10th day of July, 1865, an assessment of three ($3) dollars per share was levied upon the capital stock of said Company, payable immediately, in United States gold and silver coin, to the Secretary, at the office of the Company, 606 Merchant street, San Francisco.

Any stock upon which said assessment shall remain unpaid on Saturday, the 12th day of August, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Monday, the 28th day of August, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

Wisconsin Gold and Silver Mining Company, pany, Silver Mountain District, Alpine county, California.

ASSESSMENT No. 4.

Notice is hereby given, that at a meeting of the Board of Trustees of said company, held on the 12th day of July, 1865, an assessment of one ($1) dollar per share was levied upon the capital stock of said company, payable immediately, in United States gold and silver coin, to the Secretary, at the office of the company, or to R. H. FOAD, at Silver Mountain.

Any stock upon which said assessment shall remain unpaid on Saturday, the 19th day of August, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 26th day of August, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

J. WARREN CLARK, Secretary.
Office, No. 410 Montgomery street, San Francisco.

NOTICE.—At the above meeting, assessment No. 1, of 8 cents, levied July 8th, 1863, assessment No. 2, of 10 cents, levied September 19th, 1863, and assessment No. 3, of 50 cents per share, levied June 3d, 1864, were rescinded, and stockholders having paid the same, or any portion, will be credited on above assessment, No. 4 accordingly.

jy22 J. WARREN CLARK, Secretary.

Yosemite Silver Mining Company, Oro Fino District, Humboldt county, Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 3d day of July, 1865, an assessment of one dollar and twenty-five cents ($1.25) per share was levied upon the capital stock of said company, payable immediately, in United States gold and silver coin, to D. H. CROWE, No. 402 Front street (up stairs), San Francisco, or to Jas. T. MACLEAN, Superintendent, at the mine.

Any stock upon which said assessment shall remain unpaid on Saturday, the 5th day of August, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 19th day of August, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

S. O. PUTNAM, Secretary.
San Francisco, July jy8

Agent Wanted.

A good Canvassing Agent can secure permanent and remunerative employment by calling at the office of the MINING AND SCIENTIFIC PRESS, 505 Clay street.

Printer Boy Wanted.

An active and reliable boy, about sixteen years of age, who wishes to learn the printing business thoroughly, in all its branches, can obtain a situation at this office upon presenting suitable recommendations.

U. S. 7-30 LOAN.

By authority of the Secretary of the Treasury, the undersigned has assumed the General Subscription Agency for the sale of United States Treasury Notes, bearing seven and three-tenths per cent. interest per annum, known as the

SEVEN-THIRTY LOAN.

These Notes are issued under date June 15th, 1865, and are payable three years from that time in currency, or are convertible, at the option of the holder, into

U. S. 5-20 Six Per Cent.

GOLD BEARING BONDS.

These Bonds are now worth a premium of nine per cent. including gold interest from November, which makes the actual profit on the 7-30 loan, at current rates, including interest, about ten per cent. per annum, besides its EXEMPTION FROM STATE AND MUNICIPAL TAXATION, WHICH ADDS FROM ONE TO THREE PER CENT. MORE, according to the rate levied on other property. The interest is payable in currency, semi-annually, by coupons attached to each note, which may be cut off and sold to any bank or banker.

The interest amounts to

One cent per day on a $50 note,
Two cents per day on a $100 note,
Ten cents per day on a $500 note,
Twenty cents per day on a $1,000 note,
One dollar per day on a $5,000 note.

Notes of all the denominations named will be promptly furnished upon receipt of subscription. This is

The only Loan in Market

now offered by the Government, and it is confidently expected that its superior advantages will make it

THE GREAT POPULAR LOAN OF THE PEOPLE.

Less than $300,000,000 of the loan authorized by the last Congress is now on the market.

This amount, at the rate at which it is being absorbed, will all be subscribed for within four months, when the notes will undoubtedly command a premium, as has uniformly been the case on closing the subscriptions to other Loans.

In order that citizens of every town and section of the country may be afforded facilities for taking the Loan, the National Bank, State Banks, and Private Bankers throughout the country have generally agreed to receive subscriptions at par. Subscribers will select their own agents, in whom they have confidence, and who only are to be responsible for the delivery of the notes for which they receive orders.

JAY COOKE,
Subscription Agent, Philadelphia.

March 25, 1865. 17v10-3m

ADDENDUM.

PER OVERLAND TELEGRAPH:

PHILADELPHIA, May 17, 1865

Second Series all sold. Commenced on Third Series. Two Hundred and Thirty Millions (230,000,000) precisely like other two Series, except dated 15th July, and Government reserves the right to pay six per cent. in Gold instead of 7-30 Currency.

JAY COOKE,
Subscription Agent, Philadelphia.

MEXICAN

TEN PER CENT.

SIX YEAR LOAN.

The undersigned, having a full Power of Attorney from Gen. GASPAR SANCHEZ OCHOA, Commissioner for the REPUBLIC OF MEXICO, as Agent for the sale of the Bonds of this

POPULAR LOAN,

These Bonds will be sold at

Fifty Cents on the Dollar, Gold Coin.

They bear date July 1st, 1865, and are now ready to be furnished in sums to suit, in denominations from $50 to $1,000.

The principal and interest are payable in United States gold coin.

Interest payable semi-annually at the PACIFIC BANK, in the city of San Francisco.

The payment and redemption of these Bonds and Coupons are secured by the transfer to the undersigned, as Trustee, of one-half of the fiscal proceeds of all the

Revenues and Duties

Derived from the Custom Houses of

MAZATLAN,
GUAYMAS,
MANZANILLO,

And all the Ports in the States of

Sinaloa, Sonora and Colima,

AND FROM THE MINES OF SAID STATES,

Which Revenues and Duties, so soon as collected, are to be deposited and held by the undersigned in the

Pacific Bank, San Francisco,

And employed exclusively for the payment of said

BONDS AND INTEREST.

General OCHOA has made an assignment to the undersigned of one-half of all the duties received at the above Custom Houses, for the payment of said Loan and Interest, and also to appoint Agents to receive the above Revenues.

☞ SUBSCRIPTION BOOKS are now open at our Office, No. 3, third floor, Masonic Building, No. 420 MONTGOMERY STREET, San Francisco.

SAMUEL BRANNAN,
AGENT.

Francisco, Cal., July 1, 1865. 1v11-1m

HELMBOLD'S

FLUID EXTRACT BUCHU

For Non-Retention or Incontinence of Urine, Inflammation or Ulceration of the Bladder or Kidneys, Diseases of the Prostrate Gland, Gravel, Brick Dust Deposits, Dropsical Swellings, Organic Weakness, Debility, Female Complaints, Etc.

H

HELMBOLD'S

FLUID EXTRACT BUCHU

—AND—

Improved Rose Wash

Will radically exterminate from the system Diseases arising from Habits of Dissipation, *at little expense, little or no change of diet, no inconvenience or exposure;* completely superseding those *unpleasant and dangerous remedies, Copaiba and Mercury,* in curing these diseases.

E

USE HEMBOLD'S

FLUID EXTRACT BUCHU

In all Diseases of the Urinary Organs, whether existing in MALE or FEMALE, *from whatever cause originating, and no matter of how long standing.* It is pleasant in its taste and odor, IMMEDIATE in action, and more strengthening than any of the preparations of *Bark or Iron.*

Those suffering from *Broken Down or Delicate Constitutions, procure the Remedy at once.*

The reader must be aware that however slight may be the attack of the above diseases, it is certain to affect his *Bodily Health, Mental Powers and Happiness.* If no treatment is submitted to, Consumption or Insanity may ensue.

All the above diseases require the aid of a diuretic.

Hembold's Extract Buchu

IS THE GREAT DIURETIC.

L

HELMBOLD'S

HIGHLY CONCENTRATED

Compound Fluid Extract Sarsaparilla,

For purifying the Blood, removing all diseases arising from excess and imprudence in life, chronic constitutional diseases arising from an impure state of the blood, and the only reliable and effectual known remedy for the cure of Scrofula, Scald Head, Salt Rheum, Pains and Swelling of the Bones, Ulcerations of the Throat and Legs, Blotches, Pimples on the Face, Tetter, Erysipelas, and all scaly eruptions of the skin, and beautifying the COMPLEXION.

M

NOT A FEW

Of the worst disorders that afflict mankind arise from the corruption that accumulates in the Blood. Of all the discoveries that have been made to purge it out, none can equal in effect HELMBOLD'S CONCENTRATED EXTRACT OF SARSAPARILLA. It cleanses and renovates the Blood, instills the vigor of health into the system, and purges out the humors which make disease. It stimulates the healthy functions of the body, and expels the disorders that grow and rankle in the Blood. Such a remedy, that could be relied on, has long been sought for, and now, for the first time, the public have one on which they can depend. Our space here does not admit of certificates to show its effects, but the trial of a single bottle will show to the sick that it has virtues surpassing anything they have ever taken.

B

Two tablespoonsful of the Extract of Sarsaparilla, added to a pint of water, is equal to the Lisbon Diet Drink, and one bottle is equal to a gallon of the Syrup of Sarsaparilla, or the decoction as usually made.

The above Extracts are prepared on purely scientific principles—in *Vacuo*—and embody the full strength of the ingredients entering into their composition. A ready and conclusive test will be a comparison of their properties with those set forth in the U. S. Dispensatory.

O

HOW TO USE THE REMEDIES.

In Diseases of the Blood, Humors on the Face, or any and every part of the body, use Extract of Sarsaparilla, applying to Pimples and all external Humors or Eruptions the Improved Rose Wash.

Use the Extract Buchu for all diseases requiring the aid of a diuretic, except those of the Urinary Organs, such as Gonorrhœa and Gleet; in these use the Extract Buchu, and inject with the Improved Rose Wash.

L

☞ THESE EXTRACTS HAVE BEEN ADMITTED TO USE IN THE UNITED STATES ARMY, and also are in very general use in all the STATE HOSPITALS AND PUBLIC INSTITUTIONS throughout the land, as well as in private practice, and are considered as invaluable remedies.

QUARTZ OPERATOR'S HAND BOOK.

A Book for Every Intelligent Prospector, Shareholder, Miner and Machinist.

ZENAS WHEELER AND P. M. RANDALL,

Authors and Publishers.

BOUND IN CLOTH—144 PAGES, DUODECIMO.

THE QUARTZ OPERATOR'S HAND BOOK is presented to the public as a carefully prepared epitome of all that is valuable for the practical operator in the mine and mill. We have here all the most necessary hints and directions for testing and assaying the ores of the various minerals; an explanation of chemical terms; a brief and intelligible description of the numerous processes for roasting ores, and the extraction of metals from their ores by amalgamation and otherwise.

The work also contains an original and highly interesting discussion of the tractory and differently formed grinding plates, as applied to the reduction of ores—a subject not only of special interest to the scientific reader, but also practically of the highest importance to every quartz miner.

Professor Silliman, of Yale, and Hodgson, of the College of California, having examined this discussion, as submitted to them by its author, Mr. Randall, previous to the compilation of this work, speak of the same as not only mathematically correct, but also as of great practical value. Messrs W. R. Eckart, Jr., Engineer, (late of U. S. N.,) and W. M. Belshaw, assayer and superintendent of the S. T. M. Co., to whom the entire work was submitted while passing through the press, speak of the same as one of high practical importance to quartz miners and millmen generally.

No work has been offered to the mining public of California which contains so much valuable information, condensed into so convenient a space as is here presented. In its preparation, much care has been taken to secure brevity, conciseness, and simplicity—in fact to make it a complete and reliable QUARTZ MINER'S HAND BOOK.

The Table of Contents of this book will be found on page 415 of the MINING AND SCIENTIFIC PRESS of July 1st, 1865.

Sold by booksellers generally. Price by mail, postage paid, $1.25. Address "Wheeler & Randall, at the Mining and Scientific Press Office, San Francisco." 2v11

NEW DISCOVERY

FOR DESULPHURIZING AND DECOMPOSING

METALLIFEROUS ORES,

—SUCH AS—

Auriferous Sulphurets, Arsenites or Antimonial Telluric, Gold and Silver Ores.

By this new process, in a short space of time these ores are decomposed or disintegrated so that they may be easily ground in a common coffee or other hand-mill. A patent has been applied for. The right of using is now for sale by EDWARD ARNOLD, Monitor, Alpine county, Cal., or by

DANIEL ROSS,

Traveling Agent for the sale of the above mentioned discovery throughout the United States. All rights sold by him will be recognized by me.

Brandreth's Vegetable Pills.—This medicine, of enduring efficacy, is justly prized as a corrector of all disorders of the stomach and bowels, the common symptoms of which are costiveness, spasms, loss of appetite, sick headache, giddiness, sense of bloating after meals, dizziness of the eyes, drowsiness, and cramping in the stomach and and bowels. These symptoms being suffered to remain, a torpid state of the liver supervenes, and all the horrors of dyspepsia are experienced. Every function of the frame is to a certain extent prostrated; but a little perseverance in the use of BRANDRETH'S PILLS will ever restore the system from this state of misery. Two or three doses will convince the afflicted of their salutary influence. The stomach will speedily regain its strength, a healthy action of the liver will soon take place, and instead of listlessness, heat, pain, and jaundiced appearance, activity, strength and renewed health, will be the blessed result. Brandreth's Pills are sold at 25 cents per box, enveloped in full directions. Purchase none unless my private Government Stamp is on the box. See upon it "B. Brandreth" in white letters.

DEWEY & CO., Proprietors.

Patent Agency and Job Printing Office, 505 Clay street, San Francisco. July 1, 1865.

TERRIBLE DISASTER.—Our citizens have been called upon the past week to mourn over one of the most terrible disasters which has ever occurred on the Pacific coast. On the 30th of July, the steamer Brother Jonathan, bound for Oregon, struck a rock off the coast, near Crescent City, and went down almost instantly—so quickly that, so far as yet heard from, only one boat load of passengers was saved, sixteen in number, out of over 160 known to have been on board. Probably there has never been a trip made up the coast by any steamer or other vessel, on board of which were so many of the leading and prominent men of our city and State, as left here on Friday of last week on the ill-fated Brother Jonathan. The flags throughout the city are still at half-mast in token of respect and mourning for the unfortunate sufferers.

SOMETHING NEW.—Paper, iron and linen shirt collars are fast going out of use. They are giving way to an entirely new article in that line, known as Ward's India-rubber enamelled collar. They may be obtained at 323 Montgomery street, in this city. They are said to be a very neat and serviceable article.

MILL FOR ARIZONA.—A mill is in process of erection at Woolsey's Ranch, near Prescott, Arizona. The machinery will be upon the ground by the last of the present month, and will be put in running order with all convenient dispatch.

THE FIFTH INDUSTRIAL FAIR.

By reference to our advertising columns the reader will observe an official "notice to exhibitors," that the Pavilion is now open for exhibitors to enter their articles intended for exhibition. There will be no postponement of the day of opening, which has been fixed for Thursday next. Workmen are still busy, under the direction of the officers of the Institute, in finishing up the preparations for the display. The statue of Lincoln has already been placed upon its pedestal under the great dome of the Pavilion. The fountain, which surrounds it, is completed, and the water was let in yesterday. Parties are engaged in arranging the flags, evergreens, etc., which are to adorn the structure. The tables and other fixtures are ready to be put in place for the reception of articles to be exhibited. Some of the heavier pieces of machinery are in place, and the foundation is prepared for the engine. The carpenters and masons have finished their work upon the "Old Folks' Kitchen," and those premises are now ready to receive such contributions as the benevolent may see fit to contribute towards the object in aid of which it has been devised—to raise a building fund for a "Sailor's Home" in this city. The plan on which it is designed to furnish and manage this institution is fully detailed in our advertising columns, to which we would refer the reader.

We had the pleasure, on Thursday, of examining a magnificent cabinet, which will be placed in the mineral department by Capt. Aiken, of Coulterville, Mariposa county, of which we shall give a full description in our DAILY FAIR PRESS. It is expected that the mineral display will be an important one, and such as shall speak well for the value of our mines. Mr. Bruckner will exhibit his patent revolving cylinder furnace, for desulphurizing sulphurets. It is already in the Pavilion. The Fire-Alarm Telegraph has taken a stand, and the wires are already up to connect with the office at the City Hall. A gong will be placed in the Pavilion, upon which fire alarms will be sounded simultaneous with the fire bells. The proprietors of the MINING AND SCIENTIFIC PRESS have a new Franklin press in the building, which will be run by steam. It will be set in order by the first of the week.

Exhibitors should lose no time in making their entries, and arranging their goods for exhibition. Monday will be none too early to commence, even for the lighter articles of exhibition. More work can be done then, and more conveniently, than later in the week, when the rush commences. It is to be hoped that the railroad and steamboat companies will conclude to make a reduction in their rates of fare during the continuance of the Exhibition. If excursion tickets should be sold, they would doubtless tend to greatly benefit the pecuniary interest of both the companies and the Institute; and such a step would be most fully appreciated by the entire community.

THE Bonner shaft in the Gould & Curry mine is now 525 feet in depth. It is destined to be the deepest shaft on the continent.

QUARTZ MILLS AT REESE RIVER.

According to the Reese River *Reveille*, there are at the present time fifteen mills working in the Reese River district, and running 115 stamps. In addition to these there are now in process of erection, in various parts of the district, eleven other mills, the most of which will be completed within ninety days, and which will run 143 stamps. The following table, which we copy from the *Reveille*, shows the location and the number of stamps of each. The first column of figures gives the number of stamps in the mills now running, the second column shows the number of those in process of erection:

Name of Mill.	Location.	Stamps.	Stamps.
Atlantic & Pacific	Union,		20
Butte	S. F. Canon,	3	
California	Austin,	10	
Clifton	Austin,	4	
Confidence	Yankee Blade,		20
Cortez	Cortez,	10	
Eagle	Austin,	3	7
Eureka	Big Creek,	10	
Keystone	Austin,		20
Long Island	Austin,	5	
Midas	Freeman,	15	
Manhattan	Austin,	10	10
New York & Ione	Ione,		10
Parrott	Millville,		10
Pioneer	Austin,	10	
Pioneer	Ione,	5	
Phelps	Big Creek,	10	
Roos	Egan Canon,		5
Social	Egan Canon,	5	
Stephen	Egan Canon,		10
Stirling	Kingston,		20
Union	Austin,	5	5
Ware	Austin,	5	
Total		115	143
		143	
Grand total		258	

In addition to the above, steps are being taken for the erection of several other mills. Scarcely a week elapse in which we do not hear of the purchase of some mine by Eastern capitalists, who invariably take immediate steps for the erection of a suitable mill upon the same. Some idea of the amount of work done by these mills may be formed from the fact that their monthly consumption of quicksilver is fully forty flasks. The *Reveille* ventures the following prediction, "that within one year the mountains and hills and cañons and ravines of Reese River, will be vocal with the hum of industry, and will echo the music of a thousand stamps; for a tithe only of the causes now in motion will produce that effect."

THE HYDROSTATIC ENGINE.—Messrs. Hansbrow & Redding have made an important improvement in their hydrostatic engine, by which they are enabled to greatly economize in the use of water. One of these improved machines, of much greater power than that exhibited by them last year at the Fair, has just been built at the Miners' Foundry, for Messrs. Clark & Nichols, of Amador county. It will be put up on the St. Louis lode, at Irisbtown, about three miles from Pine Grove.

A TERRIBLE HAIL STORM.—The French papers speak of a terrible hail storm which recently occurred in the province of Cambia, France. It is said that the entrance to the canal at Vendhuilte was so obstructed by the hail, which froze into a mass, that a large number of workmen had to be employed with picks to clear it out!

GEN. ROSECRANE has gone to Reese River. He will be absent two or three weeks, and will doubtless be heartily welcomed by the citizens of our sister State.

IMPORTANT COAL STRIKE AT MOUNT DIABLO.

We are informed by Messrs. Greenhood & Newbaner, that on Saturday last they had the good fortune to strike a bed of coal in the shaft in which they have been working so long, at Somorville, near Mount Diablo. The company is known as the "Independent," and was organized in 1860. Their shaft is 710 feet, with a drift about 400 feet from the surface, running some eighty feet toward the vein. Over a year and a half ago, while working in this drift, they encountered a sudden influx of water, which drove them from the drift and the shaft. Heavy pumping machinery was immediately set to work, which has been kept in constant operation from that time to the present. A short time since they succeeded in lowering the water to a point a few feet below the mouth of the drift, when it was found that the flow was decreased fully one-half. They then commenced boring near the end of the drift, and on Saturday last, after the augur had reached a depth of twenty-eight feet, they had the good fortune to come upon a four-foot seam of coal. This coal, as brought up by the augur, appears to be of a character quite superior to that obtained from any of the other mines in the vicinity; all of which are worked much nearer the surface—thus proving that the Mount Diablo coal improves in depth. We are informed that on trial it has been ascertained that the coal which has now been struck contains a much less percentage of sulphur than that from the mines worked at a higher level. We congratulate Messrs. Greenhood & Newbaner and their associates in the fair prospect which they now have of soon being reimbursed for the heavy outlay expended in this important development.

CONSOLIDATION OF IMPORTANT MINING CANALS IN NEVADA COUNTY.—It is stated by the Nevada *Gazette* that the Middle Yuba Canal and Water Company and Eureka Lake Water Company, who have long been in litigation regarding their respective ditches and water privileges, have settled all their difficulties by consolidation. These companies supply a large extent of mining country with water, which is chiefly used in hydraulic operations.

LATEST FROM THE MATTOLE OIL DISTRICT.—Prof. Rowlandson has shown us a bottle of oil handed him while he was passing through Napa, on Friday last, and which was obtained from the Allen & Sutter Co's well, on the Mattole, at the shallow depth of only forty-five feet. The sample was a portion of some that was brought to that place by a messenger dispatched for that purpose, and was handed to the Professor that he might make an analysis of the same.

A PETROLEUM REFINERY is about to be established in this city. The locality selected is near Meigg's wharf, in the northern portion of this city, a point convenient for receiving the crude material, and re-shipping the same when required. The refining of petroleum and manufacturing of illuminating and lubricating oils must soon become an important branch of business in this city.

Communications.

In this Department we invite the free discussion of all proper subjects—correspondents alone being responsible for the ideas and theories they advance.

THE AGE OF GOLD-BEARING ROCKS.

BY THOMAS ROWLANDSON, FELLOW OF THE GEOLOGICAL SOCIETY, LONDON.

NUMBER SEVEN.

PALEONTOLOGICAL.

The indefinite and sparse character of the palcoatological evidence hitherto announced almost precludes the possibility of framing even a short paragraph on the matter; for although the State Geologist has so far unbended as to publish, as already quoted in this series, the fact of certain forms being found in particalar beds of the Sierra Nevada no information has as yet been afforded how far such fossils are calculated to throw light upon the subject of the age of the auriferous and argeotiferous rocks found in Califoraia; and how far the anticipated volume of the paleontological results of the State survey, which has been so long promised, and whose advent has been more than once announced, will afford assistance in the inquiry, it would now be idle to speculate upon. If anything spscially interesting relating to the point under investigation should appear in this long promised volume, it will be commented upon hereafter.

In the meantime it may be statcd, on the information of Mr. Manu,* that *belemnites* have been found in beds at Mount Bullion, associated with and enclosing the celebrated "Pine Tree" vein on the Mariposa or Fremont estate, which vein is only a small section of the great gold vein which is found to crop out in a course of more than forty miles from beyond Carson Hill to beyond Mariposa, and on which have bsen opened some of the largest mincs ever worked in the State, some of which bave yielded occasionally marvellous sums; respecting which we may iostance a case at Carson Hill, where it is said that $90,000 was obtained at one blast, and $360,000 in four days working; io corroboration of which extraordinary statement it may be meutioned that the writer saw one stone, obtained at the time alluded to, which sold in London for $24,000. The fact of bclemnites being found near this vein, on Mt. Bullion, clearly establishes the fact that this part of the vein must have been filled, not earlier than the Jurassic period,† and probably very much later. A most interesting inquiry is open for some one to investigate, viz: wbether the entire length of the vein under notice crops out in the course of its entire length through one or many series of beds, and whether it is also connected with only one or several geological periods.

Prior to the statement made to me by Mr. Mann, alluded to previously, I had observed indications of pre-existing animal life in some beds on the Merced river, about four miles from that part of Mount Bullion where the belcmnites have been discovered. They were of a character difficult to describe, consisting in the greater part of rows or coaguies, of small cylindrical hollows, often as fine as the finest sewing needles; but in a few instances of nearly half an inch in diameter. The walls of the largsr openings were, however, irregular and broken dowu, so as to afford no accurate idea of the substance which originally gave form to these hollows, which were evidently the exterior casings of some previously enclosed substance, the original matter of which had entirely disappeared. In the immediate vicinity of the appearances just noticed, are numerous massive boulders, evidently derived from the neighborhood, the substance of which coasists of large angular pieces of stone commonly of a chloritic character, accompanied by white nodular pieces, possessing an appsarance very similar to that presented by pumice-stone; the whole having been impacted in a sort of grey-wacks mud, subsequently hardened into stone. At the time I noticed them, I perhaps somewhat to prematurely, assumed that these appareot sponge-like minerals were pumice; subsequent reflection, however, has suggested that they might have been fossiled sponges or corallines, and I much regret not having collected a few specimens for subsequent more careful examination and distribution. The appearances presented by the indications, afforded in the solid rock, were of such a nature that they could not have been dissovered therefrom, excepting by very delicate manipulation and a considerable amount of labor. Sufficient evidence has already been adduced in the instaocs of the belemnites already noticed, to show that auriferous bearing quartz veins, of the most important character, not only as regards magoitude, but also for possessing exceedingly rich metallic contents, exists in much later formations than which has usually been accorded as furnishing auriferous veins, and has fully justified a speculation which I ventured to announce in the *Alta California* of the 10th of December, 1863, in a concluding article under the same caption with this series, viz: that "be was at any time prepared to hear and have satisfactory evidence adduced that auriferous bearing quartz, pyrites or veins of these minerals, mixed in any or all proportions, have been found in strata of the latest periods." A theory which appears to be fully justified by later information.

[To be Continued.]

*This gentleman was deputed by the Boston Academy of Sciences to visit California, the Sandwich Islands, etc., in order to collect specimens of natural history. He returned to Boston by the steamer of the 15th instant.

†So called from the Jura Mountains on the borders of France and England; it corresponds to the Lias, the oolite and the Wealden of England.

[Written for the Mining and Scientific Press.]

Interesting Letter from Austin, Nevada.

Editors Press:—In contributiug to your valuable columns, I am actuated by a desire to enhance the mining interest. Being a miner myself, and having a pride in the occupation, I do not feel like being swept into the vortex of destruction which mining, as now managed, appears to be approaching, without entering my protest. Mining has its dark und bright sides, and nature enough faults and freaks to make it a business of hazard at the best. Yet I do hold, and facts will bear me out in the statement, that mismanagement bas done more to drive the large amount of surplus capital, so much needed, into other channels, than all natural causes combined. Assessments, one after another, have been paid under the impression that great ends were to be accomplished, the mine proven and the adventurer rewarded; while the truth was—the greater portion of the means wers squandered, and the balance so misapplied as to be valueless to the end in view. This being the rule rather than the exception, is it strange that this kind of mining should bring disaster upon the country and the business? Scalded cats scare at cold water; and as the public miud is scalded, we must begin by educating it into the belief that mining, when managed as other business, with reasonable economy and skill, will not only pay, but largely so.

In employing agents, choose none that you would reject in your own private business. To be honest, is a very good characteristic of an agent; but it matters but little after our money is disbursed to know that although it was honestly spent, yet through ignorance so misapplied as to be valueless as to the purpose intended. Lack of experience and judgment on the part of superioteadents has done more to disparage mining than all otber causes combined. Were I to attempt to enumerate the number of companies that have thus uselessly expended thousands upon thousands of dollars, time would fail me. This is the case more particularly with San Francisco incorporations, and the chief cause thereof is the frequent changes and incompetency of those employed.

The great aumber nf ledges in Reese River, of known and demonstrated value, places the mines of that district beyond the cavil of the doubting. There are also innumerable scams in that region, containing more or less quartz, but differing from veins proper by having no ore channel; these may be counted by thousands. The future of this vicinity is onward and is bound to surmount all the difficulties thrown in its way. We shall more than double our preseat mill capacity this season; but, unfortunately for those who are investing, I do not see that the amount of ore is in any wise materially increased.

Some of the mill companies seem to be alive to the importance of having ore of their own to crush, and among them we may mention the Confidence Mill and Mining Company. There is but little interest in developing the mines compared to that of milling, and if in the course of human events mills are idle, we will not therefore denounce the country as a bumbug. Capital that does not throw around itself the safeguards for its own protection, should not be denominated *intelligent* capital; but sooner or later will reap the reward of the blind leading the blind. The Savage mine the past month, furnished one-fourth of all the bullion shipped from Austin. It would be very desirable if a portion of the go-aheaditeness of the Savage could be spared to some of the other companies; you would then bear of larger shipments of bullion.

We have recently been blessed with copious showers that have moistened the earth to the depth of several inches and will render irrigation unnecessary this season. Our fertile soils and frequent showers bid fair to enable us to rival California in point of agriculture, and far surpass her as to grazing. McH.

Austin, July 21, 1865.

[Written for the Mining and Scientific Press.]

Reese River Mines.

Editors Mining and Scientific Press.—The mines of Reese River district, in which the Yankee Blade mines are included, extend over a beltof country from Marshall cañon, on the south of the town of Austin, directly through the town to Yankee Blade cañon on the aortb, a distaace of about five miles; and from the bass of the foot hills of these mountains, on the west side, running east to the top of Lander Hill, and thence on to the summit of Central Hill, a distance of four miles.

NUMBER OF LEDGES, ETC.

Tbeir name is "legion," as the tract of land above described is literally "carved out" into parallel lines of ledges, running from west to east, and pitching from south to nortb, (or very nearly so), and varying in distance, one from anotber, from 50 to 100 feet, and in some instauces as far as 300 to 400 feet. The greater portion of them are the best defined ledges I have ever seen; and never have I seen ledges that crop out to the surface with such regularity. Their casings, as they go dowa, are remarkably distinct and uniform, and notwithstanding tbeir almost inaumerable number, within the space referred to, I cannot see but that tbe majority of them present the very best geological proofs of permanency and valus. An additional proof is daily being given to this, by tbe very excellent ores that are being reached by tbose who bave had the enterprise and courage to persevere in prospectiug their cluims to a lower depth.

THE RICHNESS OF THE ORES HERE

Cannot bs denied; as from the several hundred ledges that bavo been opened, two thirds, at least, have produced much valuable ore, assaying from $150 to $1,250 per ton, and, in some instances, even as higb as $2,000.

CHARACTER OF THE MINERAL.

From the surface downward, to near the water level, the ores consist of chlorides, bromides, silver glance and some native silver, with occasionally what I should term a "silver mat," in combination with lead, antimouy, copper, and a small per cent. of iron., Tellurium abounds in a very irregular combination, as it is only occasionally that telluric silver can he met with above water, while bclow that level much of that metal can be traced. In all silver mines, on approaching water, the ore changes to the sulphuret class, showing a much greater amount of autimony than above. I would here add tbat this latter is the only base metal abounding to any appreciable extent which offers any difficulty to the successful treutment nf the ores. The (so-called) ruby silver, of tbese miues, is one of the combinations of antimony and silver, kaown to mineralogists as "miargyite." Another combination of the same metals, produced by their varying proportions, is knowa as "antimonial bleud." These, in the sulphuret form, constitute the principal character of the ores here, though, in some instances, sulpburet of copper and iron make their appearance. Tbere has been found, in one particular section of this district, some veins of cupriferous silver ore, but tbat is the only exception.

I cannot understand why the ores here should not be treated, in their reduction, to as good advantage as any of the silver nres on the Pacibc coast, as I consider them, as a whole, superior to any I have ever seeu, eitber from Mexico, Washoe, or elsewhere. Tbey should be worked to within ten per cent., at most, of fire assay. Whether well, or ill-founded, mucb complaint exists as to the per cent. of precious metal extracted from the ores by some of tbe mills here.

FOREION CAPITAL

Is pouring in with a most wondrous liberality. Nearly every one of those who went East last Winter and Fall, to offer Reese River and other Nevada mining stock for sale, bave succeeded in accomplishing their object, and are now receiviug further orders to purcbase still more. Many of tbe agents of these Eastern and English capitalists are here, on the ground, pushing on work with a vigor that most certainly does credit to their energy and enterprise.

BULLION SHIPMENTS.

It is to the fact that many of the hcretofore bullion producing mines, have recently cbanged hands, whereby has arisen the necessity for much new and improved machinery, which is now in course of erection, as well as tbat many others are about beiog negotiated for, and, of course, must stop work pending sale, that we may attribute tbe late very apparent falling off in bullion shipments from here.

AUSTIN IN THE FUTURE.

Much as we may wonder at the rapid progress this little burg has made, since the "Pony Express man" accidentally stumbled upon tbs first prospect of silver in these hills, it is not a tithe of wbat any reflecting mind can see in the future of this place. When we take intn account the almost unlimited umount of capital invested and seeking investment here; the preparations that are being made to set to work in good earnest; the immense amount of machinery coming bere, and already on the ground; the extensive and permaoent character of the works now in course of erection, for mining as well as for milling purposes; all these things, combiaed with the almost unlimited field of mineral producing country surrounding this place, must most assuredly, in a very short space of time, advauce this town to an importance second to none oat of San Francisco.

Ex-Goveroor Bigler, of Pennsylvania, has just left here, where he had been for some time, seeking to invest, and, as I understand, has done so. He left "most favorably impressed," as he himself expressed it, "with tbe very rich prospects tbis country offers."

NARROW LEDGES.

Some casuists, influenced by interests inimical to this place, will say, for want of any stronger argument, tbat the "ledges arc too narrow to be valuable;" but to me, the compactness and concentrated form in whicb they present a given amount of value, only adds still more to their relative worth. This becomes more especially apparent when we compare such ore as is found in the Comstock, of which at $30 per ton, you require ten tons to give $300, while with Reese River ores, which average $150 per ton, wbich may be considered rather a low estimate, you have but two tons of ore to treat in tho latter case, against ten in the former, giving tbe richer ore the advantage of the difference in expense of reduction, hauling, etc.

WOOD AND WATER.

The former, I should infer, from ths low rate at which it was sold the past Winter aod Spring, $6 per cord, cannot be scarce in this country; and as to the latter, there ars any amount of excellent springs issuing from tbe mountains and hills in every direction, while every ledge upon which the miner sinks to a certaia depth, approaching to 150 feet, gives a copious supply of water.

THE "HONEST MINERS" ARE LOOKING EASTWARD,

Whence they hope in future to receive tbe just reward of their adventurous and hard earned discoveries, to which they think—and I am sure humanity all the world over, leaving out Montgomery street—will dn them the justice to admit they are entitled. They set your San Francisco "freezers" down as a soulless set of "sharks," and are determined to shake them off as soon as possible, and never more to place themselves within their "loving embrace," to receive such a "bear's hug" as many nf the poor fellows have experienced from them of late.

There are several really valuable claims lying still here, from which paying ore could be taken duily, in which San Francisco men hold the controlling interests, but "dog-in-manger-like," will not have them worked, nor allow tbe locators to work them. And many nther claims, controlled in the same way, on which extraordinary assessments are levied, for which there would seem to be ao reasonable call, except to freeze out their poorer partners. This, added to what I have already described, as being the cause of stagnation here, seems to have contributed to it more than anything else.

However, the dull times seem to be a thing of the past, and better days are fast dawning on the city, whose mud-sills seem to be nf silver ledges.

In my next, the mills in operatioa, and those in course of construction within this district, as also the leading mines, the management of which I shall deem note-worthy, will be attended to; and continuing my communications to the Press, the several surrounding mining districts will be described in turu.

Austin, Nevada, July 29, 1865. J. R. M.

Victor Hugo writes: "The thunderbolt which has broken on Washington bas startled the world. Darkness of this kind occur in the history, after the dawn of night. But the American people is a colossus of bronze. Traitors can scratch it, but they know not how to destroy it. If liberty should fall in America, there would be a shipwreck in humanity. Frightful deluge."

Statistics affirm that of one thousand infants fed by a mother's milk, only an average of three hundred die young; while of the same number brought up by wet-nurses, at least half do not live one year.

A Trip to the Mountains.

NOTES FROM THE JOURNAL OF A. S. N.

From San Andreas we journeyed eastward. On the way from the little town of El Dorado, we saw considerable placer mining, mostly by Chinamen. El Dorado is a mining town, but there is little work being done there at this season of the year, on account of the scarcity of water. In passing from El Dorado to Dunning's saw-mills, we saw a great variety of country—some parts quite level and finely timbered, and other parts mountainous and barren. Near the mills are extensive cliffs of argillaceous rocks, worn into deep gulches by the action of water. Winding down a steep grade over these rocks for more than a mile, gave us a fine opportunity to examine its character.

From Dunning's to Dunbar's mills we had a high mountain to climb over. For the distance of two miles the ascent is very steep, and our team was over two hours in ascending it. The forest trees by the way are large and handsome, consisting of pine, fir, and cedar. In fact, the trees increased in size and beauty till they reached the climax in the "Big Tree Grove." The Big Trees have been described by many who have visited them, but to gain a correct idea of their greatness, one must visit them. This is a delightful place for visitors—beautiful valley, fine atmosphere, brook of cool, running water from the melting snows of the Sierras, excellent hotel accommodations, with a gentlemanly host. We do not wonder at the rapid growth of these trees, when we consider the richness of the soil in the valley, the decomposing surface rock of the surrounding hills continually furnishing nutriment for them.

About three miles south of the Big Tree Grove, are the "cliffs" on the banks of the Stanislaus. The perpendicular rock is not very high—not so high as we had anticipated from the descriptions given us—but the scenery, standing on the summit of these cliffs and looking down into the deep gorge and beholding the river rushing and foaming along down its narrow windings, and over rugged rocks, thousands of feet below, is sublime. Not even Yo-Semite gave as such an idea of vastness, as this valley. The rock of the cliffs was formerly a crystaline formation, now much changed. We obtained from it some fine specimens of serpentine. Several hundred feet below the summit of the cliffs is an aqueduct, which conducts the water from the Stanislaus, taken from the river some fifteen or twenty miles above, to Murphy's, and the country below.

At Murphy's, hydraulic mining is carried on quite extensively. On the south side of the village, and adjoining it, there is an ancient channel filled with diluvium, which is worked in some places to a depth of nearly one hundred feet from the surface. The bed-rock of the channel is limestone. The drift is raised by water-power with derricks. The water which is used for washing the drift is supplied by an aqueduct, situated on an adjoining hill about seventy-five feet above the works, and is conducted through pipes five or six inches in diameter, and forced through a smaller pipe upon the gravel. Much gold is obtained by this process, and miners find it a very profitable employment.

Three miles northwest of Murphy's, at the village of San Antonio, is located the Noble Copper Mine. This company has a fine steam engine for working their shaft, which has been sunk to the depth of 113 feet. The thickness of the vein at that depth, which is found widening as it descends, is three feet. Work at the mine has been suspended for some time, owing to the death of the president; but it is to be resumed pretty soon. The specimens of ore we saw were of a good quality.

A short distance from the Noble is the San Jose Copper Mine. A shaft has been sunk for a short distance into the vein from the surface, but the company are now running a tunnel into the base of the hill to strike the vein. From this tunnel we obtained some fine specimens of sponge-like asbestos—the finest we ever saw. The San Jose claim promises well, and we believe will eventually prove a valuable mine. There is also considerable placer mining in this vicinity.

[To be continued.]

CAUSE OF DAMAGED LIVERS.—Speaking of beer drawn through lead pipes, a correspondent of the Chicago *Medical Examiner* says: "It is a sad commentary on this beverage that it is largely chargeable with the damaged livers met with in almost every subject examined in the dead-houses connected with these hospitals."

(Written for the Mining and Scientific Press.)

The North Almaden Quicksilver Mine.

This recently discovered quicksilver mine is located in Santa Clara county, about eight miles southeast of San Jose, on the Farnsworth ranch, and nine miles north of the New Almaden. The location is beautifully situated, and well adapted to mining purposes. At the foot of the mountain, and in close proximity to the mine, Silver creek is to be found, abundantly supplied with a never-failing stream of pure water, and shaded from the sun's rays by the female laurel entwined with the "brave old oak."

The mountain, from summit to base, is promiscuously covered with cinnabar rock, producing from two and a-half to thirty per cent. metal, and indications show this kind of rock to exist in almost an unlimited quantity. Enough has already been discovered to guarantee the erection of furnaces and a spirited development of the mine. There are twelve hands now employed, with a practical miner to superintend operations. Everything appears to be working in the right direction, and the prospects of the mine are daily improving.

At the eastern part of the mine a shallow tunnel is being run through the ledge. The object of this tunnel is to reach the hanging wall of the lode and ascertain its underlie before commencing their permanent tunnels and shafts. This is as it should be, as there is no doubt it will be the means of saving time and expenditure. The tunnel has been driven some twenty feet, and the cutting through of the ledge looks truly encouraging. Though scarcely over twelve feet from the surface, the miners are, nevertheless, taking out a large quantity of good average metal.

From this point of operation some distance, to the west, there is a party employed in an open cutting. Here is a point for the study of geologists. In this cutting there is at least eight feet of black clay lying on the ledge. Out of curiosity, I had a wheelbarrow full taken to the brook and washed, when, not a little to my surprise, I found it contained from six to seven per cent. metal [minerals?] How is it that small stones of metal [mineral?] became so promiscuously diffused through this black earthy matter? Can it be what is too frequently termed *float metal?* or is it possible that they were thrown up into it by volcanic action? I would be glad to see the views of some of your able correspondents on the subject. This clay I speak of is as nature formed it, and is a most excellent material to make *adobes* with.

The ledge in this place has a somewhat different character from that of the portion driven through in the tunnel. The rock in the tunnel is of a dark brown color, coated with lime, and, I would suppose, *fumes* of quicksilver; whilst the ledge rock in the open cutting possesses every attribute to be found in the rock at the New Almaden mine, to a certain depth. In fact, I find indications here precisely the same as I have seen them in other quicksilver mines, and with much greater facilities for taking out the metal.

The mine is as yet in its infancy; nevertheless they are taking out large quantities of quicksilver, and I predict that in six months from this time quicksilver will be made for less than one-half the cost of any other quicksilver mine in the State of California. F.

REMARKS.—Accompanying the above, we received a very fine specimen of the ore taken from the "East Tunnel." We do not fully understand our correspondent's description of the "black clay" deposit, and its accompanying "metal." By "stones of metal," we are led to infer that the metalliferous substance may be a sulphuret of mercury, which, by their superior resistance to abrasion, have remained entire, while the more softer material which has surrounded them has been reduced to clay, colored, perhaps, by manganese, or by some vegetable substance. However that may be, the clay must be a secondary deposit, and not an original formation, as our correspondent appears to intimate. Perhaps at some future time we may have the pleasure of visiting the locality, and answering, more definitely, the questions of our correspondent.

A New York artist has painted a picture entitled "*Ecce Homo Honestus.*" It is Abraham Lincoln, with Diogenes, represented as dropping his famous lantern, in the background—the object of his long search of twenty centuries accomplished.

FORTY-THREE Post Offices in New York are engineered by females.

Jottings from the Mountains.

BY AN OCCASIONAL CORRESPONDENT.

THE WEATHER.

Byron says there is nothing so difficult as finding a beginning for a story, unless it be the ending; and it now occurs to me, that one rarely reads a letter of correspondence, these modern days, that does not open or close with remarks touching the vicissitudes of clime and climate. But I shall not bore you on this head. I wish simply to impress upon your mind that this is July, with a sky of brass over head and the atmosphere permeated with fine dust. Moving about the country by public conveyance, under such circumstances, is by no means pleasant, even when journeying holds out the inducements of profit.

HIBERNATES.

For the reasons assigned, since I came into the mountains—although it was my full determination to make a thorough exploration of the mines, particularly of this locality—I have remained, as the coon said, "treed, and kept my hole."

These contemplated explanations were not to be undertaken with any expectation of enlightening the world, but only to gratify the curiosity of a greenhorn in mining matters, who holds to the axiom that all knowledge is profitable, and that there is special pertinency in becoming familiar with such objects of interest as are paramount in the section of country where one sojourns, whether it be for a protracted or brief period.

A GENERAL LAMENTATION.

"Hard times" is in every mouth, and discouragement pervades all communities. And why? Because the harvest is abundant, but the reapers are few. The mines are numerous and teeming with the wealth of hidden millions; yet there is no capital to develop them. California is no longer hyperion in the mining constellation. Not that her mines are giving out; on the contrary, the country has not as yet been half prospected. But the honors are shared with her by regions in which new discoveries have been made. Her population, with that love of excitement which has always rendered the early explorers of the State uneasy, even while their prospects were the most encouraging, have repaired to Idaho, Reese River, Washoe, Esmeralda, Colorado, and other remote regions, and carried with them a great deal of the capital which otherwise might have been used here towards the development of the State's resources, and the enriching of those who possessed it.

CASES IN POINT.

Placerville, it is well known, is in the very center of the richest quartz mining region of California, if not of the world. The gold-bearing belt comes down from the region of Grass Valley, in Nevada county, and embracing El Dorado county, sweeps as far south as Tulare, and contains mines which have already yielded amounts of the precious metals that would be deemed fabulous, if we did not have our yearly shipments to point to in proof; most of the gold from which, since the placer diggings are almost a thing of the past, has been exhumed from the deep bowels of our mother earth.

MINES WITH REPUTATION.

If the reader knows anything about El Dorado county, he has heard of the Manning, Harmon, Haywards, Hinchman, Union, New York, Pacific, El Dorado, and other almost equally famous ledges, which have given character to the county, and must hereafter prove the source of its permanent wealth.

TAKE ONE OF THESE AS A SAMPLE.

One of these mines, and only one, thus far, I have visited, explored, and inquired about. Indulge me, therefore, while I speak of it. I allude to the Harmon. This mine is located on the west side of "Quartz Mountain," about a mile north of Placerville, nearly on the line of the Pacific Railroad. It has been opened for several years, although I am informed only worked with success two years of that time. A tunnel has been put in 350 feet, and a shaft sunk eighty feet. A fifteen-stamp mill, with an engine of twenty-horse power, all in complete working order, are on the ground. There is also a large and well built boarding house for the workmen. Between $15,000 and $16,000 have been expended on these improvements, and $29,000 have been taken out of the mine, sufficient to justify the trustees in declaring two different dividends. The ledge is twelve feet wide, and the rock which is taken from it has thus far averaged about $40 to the ton. I have several pieces before me, with numerous particles of gold visible to the naked eye. The stock of the Harmon has been quoted in the market as high as $50 per foot, and is perhaps worth five times that much to-day.

WHY NOT?

Why will the stock of such a mine not *bring* a price in some degree commensurate with its value? The answer involves just such a state of affairs as I have spoken of. There is not capital enough in the country to meet the demands of one-tenth part of the mills and ledges. This mine, among others, must lie idle until there is money in the country to work it.

ITS PRESENT CONDITION.

The rock of the mine grew richer as the shaft went down. The water line was struck at a depth of forty feet. The volume increased as the shaft descended, until it was found impossible to clear the mine without steam-power. The company had, besides, managed the affairs of the mill and mine badly. Mr. J. W. Epley, who was a large owner, seeing how things was going, and knowing the mine to be immensely valuable, in self-defense purchased a chief part of its stock; but by doing so, expended so much of his available means as to be unable to proceed with the work at the present time.

LET US HAVE CAPITAL.

If this mine—and I name it only because it serves as an example—with its splendid gold-studded rock, is compelled to remain unworked for the want of a few thousand dollars, what show is there for those ledges which possess no such advantages as mills, in good working order, boarding houses, fine roads, nor lie in proximity to populous towns and cities?

We *must* have more capital. Mr. Editor, appeal to the millionaires of the East who have realized such vast fortunes in oil, and see if you cannot induce them to come up into this rich mineral region and invest.

HOMER.

Placerville, July 28th, 1865.

NEW PROCESSES.

The latest new "process" which we have noticed, is termed the "Wilson Process." It is described in the New York *Stockholder* as follows:

The process consists of a series of fire-clay retorts, cylindrical in shape, and arranged one above the other, and all inclosed and made to revolve in a large furnace, the fire being applied below, the heat and flame passing up and around the cylinders. These cylinders are heated to a cherry red, when the sulphurets are introduced into the top one, which is so constructed as to automatically discharge into the one next below, and so on through the series, the last discharging into a water-bath. During the process a current of air and steam combined is caused to constantly intermingle with the ore, causing a more perfect oxydation. The construction and operation are such that no loss can ensue from vaporization or currents of air, as in the ordinary reverberatory-hearth. The whole arrangement is compact, and not very expensive. Crushing and triturating machines accompany desulphurizing machines when required.

Another method, brought forward by an experimenter in Newark, pulverizes the ore and submits it directly to nitric and muriatic acids, as being the solvents of gold. All the gold that is touched by them, and all the other base metals, are readily dissolved. The solution is then poured off, and the various metals in it are precipitated by different chemical substances. A portion of the process is kept secret by the discoverer; but the main point is the dissolving the gold in *aqua regia*. The process has the merit of dispensing with quicksilver, but at the expense of large quantities of costly acids.

TRIUMPH OF YANKEE GENIUS.—At a recent trial of breach loading guns at St. Petersburg, Russia, in presence of a deputation of high officials, after the rejection of the English made guns of Clay, Whitworth and Armstrong patterns, and a trial between Prussia and Berlin guns, and one invented by an American named Broadwell, the latter was adopted as preferable and more perfect than any of the others. The London *Mechanics Magazine* urges the English Government to alter the Armstrong gun to Broadwell's pattern.

THE cessation of hostilities allows Government to save thirty-five millions of dollars per annum in the single item of coal.

SUGAR FROM ASPEN.—At Salt Lake, sugar is made from boiling the sap of the quaking asp. The process is similar to that of making sugar from the sap of the maple.

SALES OF THE WEEK

Saturday, July 29.

16 shs Yellow Jacket at $1150 per foot.
1 sh Yellow Jacket at 1125 per foot, s 30.

Amount of sales.....$104,230 00

From the Stock Circular of Associated Brokers of the S. F. Stock & Exchange Board.

SAN FRANCISCO, SATURDAY MORNING, August 5th, 1865.

The condition of the money market is substantially unchanged Continued ease prevails, and first-class indorsed business paper can be placed at 1¼ ₱ cent. per month in bank. Other descriptions of security are taken at former rates—1½ ₱ cent. per month. In the open market, transactions are made witbin a range of 1½@2½₱ cent. It is estimated that the banks and bankers of this city, at this time. hold on deposit at least $8,000,000 in available cash means, and have, probably nearly as large an amount under discount to their customers.

Receipts of treasure from the interior and north coast for the month of July, amounted in the aggregate to $4,600,000, and since Saturday last they have exceeded $1,000,000.

Gold Bars met with a better demand for shipment this week, and advanced to 835@840. Silver bas been in less favor, and current rates are lower than for some time past; round lots are quotable at abont ½ ₱ cent. discount.

Legal Tender Notes remain inactive, and trifling sales were made at the Board within the range of 74⅛@73⅞c, closing at about 73¾c bid, 74c asked. We have no later telegraphic advices from the East.

The Share Market has been characterized by a fair degree of activity this week. Some leading stocks are in better request, and have advanced under the receipt of more favorable advices as to the character of present developments, and a number of other stocks of perhaps less certain value, have fluctuated materially, and are lower than at the close of last week.

Gould & Curry advanced from $1,500 to $1,530, then sold $1,500@ $1.475, seller 30, and closed at $1,530 asked. The yield of this mine in bullion has shown a slight falling off recently, but the present financial condition of the company is said to be as favorable as it has been for three months past, and a dividend of $40 ₱ foot will be paid to-day, for the month of July.

Alpha has met with no sales since Saturday, and is held with some firmness at about $1,440. Work is still progressing upon the main shaft, and very efficient hoisting machinery is now being erected.

Yellow Jacket has been in better request, and 125 feet were dealt in, opening at $1,125, seller 30, and $1,150 cash, steadily advancing to $1,340, receding to $1,225, and selling yesterday at $1,210@1,220. We are authorized to say that an assessment is not deemed necessary by the officers of this company, and that their immediate liabilities have been reduced $50,000 during the past thirty days. The improvements to the Morgan mill will, it is thought, be completed in ten days, and its reduction capacity then increased to 80 tons per day. The product of the mine has amounted to some $150@160 tons of ore, averaging $35@40 per ton, for several weeks past, and the entire yield of bullion for the month of July exceeded $160,000. The new body of ore, found in drifting west from the 360-feet level, is said to promise well, and more favorable indications have been met with in running south. The winze sunk from the same level to a depth of 40 feet, has penetrated a mass of good ore, and it is supposed that this body will be found to continue to the new level below, when the latter is opened at a depth of 440 feet.

Savage continues dull and inactive, but is rather more firmly held at $1,300. The product of this mine amounts to about 70 tons of ore per day, averaging $32@33 per ton.

Crown Point is in more favor, and 60 feet were sold, opening at $900, advancing to $955, receding to $910, rallying to $970, dropping to $955, and closing at $900 bid. The main shaft is now down some 305 feet, and drifting will begin at an early day from the new level at a depth of 315 feet. Work from the incline in the west stratum continues to disclose a body of good ore some 12 feet wide. A late crushing yielded $62 per ton.

Belcher has been steadily maintained, advancing from $800 to $820, dropping to $805, rallying to $835, and selling yesterday at $830@835. The main shaft has attained a depth of over 500 feet, and two new levels will soon be opened.

Chollar declined from $525 to $515, rallied to $530, receded to $452½, then sold at $455, and was dealt in yesterday at $455@490. In all, some 185 feet changed hands.

Potosi advanced from $490 to $525, steadily declined to $440, and closed yesterday at $457@462, within which range 260 feet were sold. The joint product of these two mines now exceeds 200 tons per day, and some half-dozen mills have been employed. The body of ore found in running west from the lowest level of the Potosi, is said to be 12 feet in width and 30 feet long. The south Chollar mine is producing 50@60 tons of ore per day, and a new deposit has been disclosed in stopeing up from the old Potosi tunnel.

Ophir rose to $444, receded to $415, seller 30, rallied to $430, and was sold yesterday at $425@420. Hale & Norcross met with trifling sales at $525@530, and is now held at $600. Empire Mill & Mining Company is offered at $475 ₱ share. A dividend of $20 per share has been declared, payable on the 10th inst.

Uncle Sam has been in less favor this week, advancing from $280 to $320, (assessment of $50 delinquent), rapidly declining to $180, rallying to $244, receding to $235, and changing hands yesterday at $235 @270. Overman rose from $250 to $320, fell to $200, and was held at the close at $270 A late crushing of 121 tons of ore at the Vivian mill yielded about $27 ₱ ton. Considerable ore is being taken from the 406-feet level, and also from the upper and lower levels.

Imperial opened at $230, declined to $226, rallied to $230, dropped to $220, and sold yesterday at $230@235. The receipts of this company for July exceed $115,000, being the largest monthly yield in the history of the mine, and $45,000 in excess of last month. The ore reduced in July averaged about $50 per ton. The result of the suit of Lindauer & Hirschman *vs.* this company, requires the dam on the Carson at the Rock Point Mill to be lowered a few inches, but it is claimed that this will not affect the full reduction capacity of the mill with the aid of their present steam power. A dividend for July will probably be declared to-day.

Confidence is in much less request, and some 300 shares were dealt in, declining from $170 to $120, rallying to $135, and selling yesterday at $135. The company having drifted a long distance to the east at a depth of 500 feet without finding ore, now propose to run south to meet a continuation of the deposit found in the 375-feet level above.

Minerva has been sold at $165@170, assessment unpaid, and is now offered at $175. The recent compromise with the Bullion company gives the Minerva 400 ont of 900 feet of ground in the southern portion of the mine, and a new incorporation is to be formed.

Bullion rose from $155 to $165, and closed at about $165. This company will now have, in all, some 1300 feet of ground.

Burning Moscow has been moderately dealt in within a range of $37@29, closing at $31. North American fell from $43 to $35, rose to $38 and closes at $37. An assessment of $10 per share has been levied on this stock. Sierra Nevada rose from $25 to $42½, fell to $20, and was sold at the close at $23.

Golden Rule, Tuolumne county, is in some favor at $10 bid, $15 asked. The company are said to be out of debt, own a small mill of 6 stamps, and have a considerable surplus in their treasury. The yield of the mine for the past two months exceeded $8,000. A first dividend of 50c. ₱ share on 3000 shares was paid in July.

The aggregate recorded sales of stocks, since Saturday last, amounted to $868,810.

MECHANICS' FAIR.

DAILY PRESS.

The Proprietors of the MINING AND SCIENTIFIC PRESS having been granted the privilege of printing the DAILY PRESS at the Pavilion, during the approaching Exhibition, are making complete arrangements to publish a full and faithful record of the Grand Exhibition, and will present gratuitously to all visitors and exhibitors the LARGEST, most ATTRACTIVE and VALUABLE paper ever issued at a public fair.

Its Free and Extensive Circulation will render it a peculiarly desirable journal for advertising. From SEVEN to EIGHT THOUSAND individuals visited the exhibition last season in a single day and evening.

Our printing press, in active operation, rapidly throwing off an interesting sheet into the very hands of the anxious throng, presents an attractive scene, affording one of the most novel and effective modes of advertising ever offered through the columns of a newspaper. Many persons being eye-witnesses to the printing of the paper, preserve copies as reminiscences of their visit to the Fair, while others procure bound volumes to be retained as a permanent record of the Exhibition, giving a further benefit to advertisers in addition to its wide circulation.

Those wishing to secure space for advertising in the MECHANICS' FAIR DAILY PRESS, will do well to make early application to the proprietors or their agents.

Payment will not be solicited until after the advertisements appear and are found to be according to contract or the satisfaction of the advertiser.

DEWEY & CO.,
Patent Agents, Publishers of the Mining and Scientific Press, and Job Printers, 505 Clay street, San Francisco.

Notices of the Press.

Following are a few of the select compliments paid the first volume of the DAILY FAIR PRESS, last season:

THE SCIENTIFIC PRESS proprietors strike off and give away thousands of their little sheet, entitled THE MECHANICS' FAIR DAILY PRESS. The second issue of this paper, published last night, gave the multitude some intelligence of the Washoe disaster. There were great crowds all the evening about the telegraph and the presses, many of whom had their first sight at the practical working of these great motors of civilization.—[S. F. Evening Bulletin, Sept. 7, 1864.

SCIENTIFIC PRESS.—A printing office has been established at the Mechanics' Fair, and Messrs. Dewey & Co., the enterprising publishers of the MINING AND SCIENTIFIC PRESS, are issuing from it a handsome double-sheet daily, which is a credit to themselves, its editors, and to the Fair.—[S. F. Morning Call, Sept. 8, 1864.

THE MECHANICS' FAIR DAILY PRESS is the title of a very neat quarto paper published at the Industrial Fair Pavilion, by Dewey & Co., of the MINING AND SCIENTIFIC PRESS. It reflects great credit, as does the weekly, upon the enterprise and ability of the publishers. We want it regularly.—[Reese River Reveille.

Agent Wanted.

A good Canvassing Agent can secure permanent and remunerative employment by calling at the office of the MINING AND SCIENTIFIC PRESS, 505 Clay street.

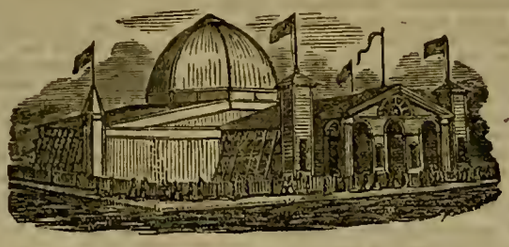
THE FIFTH INDUSTRIAL FAIR



OF THE MECHANICS' INSTITUTE OF SAN FRANCISCO,

To be Held in the Mechanics' Institute Pavilion in August, 1865.

The Mechanics' Institute having determined to hold their Fifth Industrial Fair during the coming season, the Executive Committee would respectfully invite all persons desirous of exhibiting Machines, Manufactures, Agricultural Implements, Horticultural Products, Minerals, Ores, and Works of Art, to make application immediately, in order that the proper space may be allotted them.

The Exhibition will be open to the public on Thursday, the 10th day of August, at 10 o'clock A. M.

The general management of the Fair is entrusted to an Executive Committee, consisting of the officers of the Institute.

No contracts or agreements will be recognized unless made by the authorized agents of this Committee.

A competent person will be in attendance at the Pavilion to receive and register all goods designed for exhibition, and will receipt therefor.

Contributions of Machinery and other articles that require long time to prepare for exhibition, will be received from the 15th of July to the 2d of August.

Articles for exhibition that require large space may be entered on or before the 20th day of July, and space will be allotted to the exhibitor on or before the 2d of August.

The Picture Galleries will be ready for the reception of Pictures, Embroideries, Wax and Fancy Work of all kinds, on the 1st of August, when space will be allotted.

The Committee will be prepared for the reception of Fruits, Flowers, Agricultural and Horticultural Productions, and design to have the tables so arranged that the best display possible can be made in this department, and every effort will be made and care taken to preserve their freshness, so that exhibitors may receive full credit for their productions. Those wishing space on these tables should engage it at an early day. There will be space reserved for additions in this department during the Fair.

The several transportation companies, as on former occasions, have, with commendable liberality, consented to transport articles intended exclusively for exhibition free of charge, and Messrs. Wells, Fargo & Co., in like manner, will take charge of them.

The Committee have the fullest confidence that the coming Fair will not only be the most complete and varied in its character, but will also be more attractive than any previous exhibition of this kind on this coast.

No pains or expense will be spared to give the contributors satisfactory opportunities in the spacious pavilion of the Institute for the display of their contributions, and to furnish whatever may be necessary to make the Fair an institution where those who frequent it may be both pleased and instructed.

All articles forwarded should be labeled "For the Industrial Exhibition," San Francisco.

All communications to be addressed to C. S. HIGGINS, Corresponding Secretary.

Mining Summary.

WASHOE.

It appears from the Gold Hill *News*, that quite a number of mills in Gold Cañon, which would otherwise have to remain idle, are now engaged in hauling away from the Gold Hill mines rock that has heretofore been considered waste, and are doing a very good business in crushing the same. It is said that thousands of tons of such rock have heretofore been hauled away to fill up old excavations, which, had it been suffered to remain at the mine, would now be worth much money, and have afforded employment to many mills and scores of idle hands. The suggestion is very properly made, that such rock should hereafter be carefully saved. Even if it could not be crushed during the present time of stagnation in the milling business, the time will soon come when, by the building of railroads, etc., milling expenses will be so much reduced as to render rock, now absolutely valueless, worth considerable money. The cost of assorting and piling away by itself such rock cannot be much, as it has to be disposed of in some manner, and in most cases can be as easily and cheaply stored by itself, as to be thrown in confusion with worthless dirt and barren rock, in places not easy of access.

The Yellow Jacket is said to be taking out very excellent rock. The report that an assessment of $200 per foot was about to be levied by this company, to pay its liabilities, is contradicted. It is now stated that the mine will easily pay off its debt from its income in a few months.

The Rock Island Company, through the aid of Senator Stewart, has secured the assistance of Eastern capital for its vigorous and thorough development. The Eastern company develop the claim for half its stock, the balance being assessible.

The Cole Company, after the persevering labors of five years, much of the time making but two or three inches a day, are now in with their tunnel a distance of 1,050 feet, and have recently come into good working ground, and struck a flow of some twenty-five or thirty inches of water, the sale of which is now paying the entire expense of driving the tunnel. They are now about 250 feet from the lead, which they will strike at a great depth, and, we hope, proportionally rich.

The Globe Company have struck some excellent rock in their claim on American Flat. They not long since struck pay rock in their shaft, but owing to a large influx of water, were unable to go to any great depth on the deposit. By an arrangement with the Kentucky company, however, they have driven in the tunnel of the latter, and have at last struck their lead at a depth much below the bottom of their shaft, finding ore of an excellent quality. The company will soon send a quantity of ore to the mills for reduction, when its exact value will be determined.

The Sierra Nevada Company, it is reported, have struck a deposit of fine looking ore in their mine. This company has been laboring assiduously for years in the development of their ground, and the public has been for a long time looking to this claim as the one destined to define the main paying ledge, on the north. If reports are correct, they have now accomplished that purpose.

The Overman Company are now taking out considerable quantities of ore. They have a number of tons of good pay rock on their dump, and have also hauled away to mills a number of tons besides. This is the first pay rock which the company have taken out since their new hoisting works were erected, about a year ago.

The Jura Company, on American Flat, have commenced operations on their claim, and henceforth will vigorously prosecute its development. Several other companies in the same vicinity are industriously at work upon their claims.

Flattering reports are given of the success of Dall's Mill at Franktown, under the superintendence of Mr. T. B. Schamp, a gentleman who has had an extensive experience in working silver ores. All the ores received at this mill that will work more than one hundred dollars are crushed by the dry process, roasted, amalgamated in the barrels, and the large amount of eighty per cent. of the fire assay is *guaranteed* to be returned to the assignors. The poorer grades of ore are worked by the pan process with average results.

NYE COUNTY.—The Nye County *News* gives favorable reports of the mines in that section of Nevada. Work appears to be prosecuted vigorously on the mines in that district, and all are sanguine of success. The ledges are represented as large, rich, and well defined. The chance for litigation is not so great as in some other districts where the ledges are more numerous, but smaller than here. The attention of capitalists is called to the advantages of that district, when it is confidently expected the returns will be both speedy and large.

The machinery for the Atlantic and Pacific Co.'s mill has arrived at Union. S. B. Martin and Co., are building a 10-stamp mill at Silver Peak, which will be running in September, for which the proprietors receive a one-half interest in the Vanderbilt ledge. A 3-stamp mill is being erected in Red Mountain District, by Phelps & Co., on the Hughes & Co.'s claim.

There are now being added to the amalgamating machinery of the Sapphire quartz mill sixteen more pans. The mill will have fifty-six amalgamating pans in all, when those now being put up are ready for use.

CALIFORNIA.

TRINITY.—The *Journal* remarks as follows on quartz mining in its county: There is yet considerable excitement relative to the late quartz discoveries in this county. The "Scorpion" company, mostly residents of this county, are making preparations for thoroughly prospecting their ledge this season, and work is being pushed vigorously in the West Weaver neighborhood. At Trinity Center the Copper creek and Whiskytown companies are busily at work, and we learn have lately taken out some fine prospects.

SIERRA.—According to the *Messenger*, the mining season in Alturas is about closed; most of the companies are through cleaning up, but it is rather hard to find out the exact sums taken out by the several claims. S. Kingdon & Co., have taken out $150,000, and are not quite through yet, and it is supposed they will reach the figure of $170,000. Other companies have done well. The Laporte companies cannot boast of such heavy returns of the precious ore as at the Secret Diggings, but they are willing to foot up at the end, and expect that the large aggregate made by the small sums saved, will form a base that is not easily shaken or scattered. The La Porte company will reach, when fully cleaned up, about $15,000; the Eagine company about $20,000; the Gowell company about $57,000, and other companies ranging from $10,000 to $15,000, though many have not realized their expectations in full.

The *Messenger's* correspondent from Howland Flat, writes that the tunnel mines there present a more cheering prospect than indicated by the sluicing. At Pine Grove the two prominent ones are the Lone Star and Sugar Loaf companies. The former are taking out larger pay than ever, running as high as eleven hundred dollars per week for eight men, and small expenses other than labor. The Down East and Mountaineer companies seem just at the present to be taking the lead. The Down East holds out and gives out, and the owners are happy in a certainty. The Mountaineer is making big clean-ups. The St. Louis, Wabash, Shirley, and other companies, are all realizing pay for labor at least, and extra pay at times.

NEVADA.—The *National* reports that Scadden, Trenberth & Co., on Boston Ravine Flat, have struck some extraordinary rich rock within a few days past. Nearly $3,000 in specimens were taken out in a few hours, with a plenty more of the same sort left in sight. These claims are on the same lead with those of Messrs. Watt & Co., on Massachusetts Hill, which have long been celebrated for their extraordinary richness.

Large quantities of exceedingly rich rock have recently been taken out of the Badger claims. Small lots have been obtained which will pay thousands of dollars to the ton. The incline is now down 180 feet.

The latest reported "clean up" of the Lucky company was a five thousand dollar brick, the result of one week's crushing with eight stamps. It is reported that Capt. S. W. Lee has sold out to Mr. Samuel Curtis, late superintendent of the Savage mine, at Virginia, the Ione claim, two miles south of Ophir Hill, on the Auburn road, for the consideration of $10,000.

The Star Spangled Banner mine, in Nevada, promises to become one of the most valuable in that portion of the county. Six or eight teams are now constantly employed in hauling its rock to the mill, where it is paying about $50 to the ton. Messrs. Kidd & Tisdale recently purchased this mine for $15,000.

The *Transcript* says that the mill of the Smith Brothers, at Rough & Ready, is now kept in constant operation upon rock taken from a ledge near that place. The quartz gives promiss of being quite rich.

R. C. Black, at North Bloomfield, recently purchased what is known as the Beck claims, and has been working them with excellent success. After paying all the expenses of a run of five weeks, he has $3,645 clear. The diggings are expensive ones, and the amount cleared proves them to be among the best.

SHASTA.—We learn from the *Courier* that an eight stamp mill is now on the way to the French Gulch mining district for the Honeycomb company. The prospects of this company are exceedingly flattering. Mr. S. B. Grover puts up the mill at his own expense, and runs it until the receipts shall have paid him for his outlay, when the mill and lode will become the joint property of five. It will be run by hydraulic pressure on a hurdy-gurdy wheel. The fall to the wheel is about 150 feet, and the proprietor thinks twenty-five inches of water will furnish a superabundance of power for twelve stamps. The rock in this lode is very much honey-combed, hence the name of the company. The mill will be in operation by the middle of September. The Honeycomb is the third mill in French Gulch; the Scorpion will make four—a fair beginning for poor folks. A few years, and the number may be multiplied by ten, says the *Courier*.

REESE RIVER.

We would call the attention of readers to the letter of our Reese River correspondent, which will be found in another column; also, to another article on the "Quartz Mills of Reese River." Aside from the matter contained in those articles, we have but little new from that direction this week.

We learn from the *Reveille*, that a rich body of ore has been struck in the Providential mine, on Lander Hill, which assays as high as $450 to the ton.

The Quertera mine, in Marshall Cañon, owned chiefly by Antonio Borques, is yielding upwards of $400 a week from ore mined and worked in a arastra, by six men only.

Mr. George Hart has entered into a contract with the proprietors of certain well known mines in the San Antonio District, for the erection of a ten stamp mill, with the barrel process. These mines are the Lee, Springfield, and La Libertad, and the owners have agreed to supply the mill with sufficient ore to keep it in constant operation. The mill is now being constructed in San Francisco, and will probably be completed and erected in ninety days.

HUMBOLDT.

The Humboldt *Register* says that a dividend of twenty-five cents to the share was declared by the operators of the Montezuma mine. This is the first regular dividend ever regularly made by any claim in the county. Individual owners have received product of ore worked—and companies have made expenses; but this was a net profit to all owners. It is to be hoped that this is the beginning of a bright future for Humboldt.

Mr. A. Stevenson, superintendent of the New York Company—the Etna—who has recently bought for that company the Montana ledge, in Trinity District, is now engaged in putting up a ten-stamp mill on the mine, the machinery for which has recently arrived on the ground. He will use Varney's pans, and Settler & Hungerford's separator. The Evening Star Company, near by, discontinued work upon their claim just as they got the ledge fairly below water. Webber's mill was lately running on a small lot of ore from the Savannah. Mr. W. was depending for ore mainly upon the Evening Star, and thinks he will now have to remove to the neighborhood of the Arabia mines, in the southeast corner of the district. The Montezuma mine is located there, and is considered rich. Good results have been obtained by mill process from the ore, although it is difficult to work, and they have not yet been able to extract near all the silver.

In this neighborhood are located the "Dunderburg," "Savannah," "Ne plus Ultra," "Sultana," Gloriana," "Galena," "Butte," and "Tontine" series, "Bartlett," "Eagle," and "Pacific" ledges. All these are rich, and apparently well defined, ledges. The mineral in these ledges is described as containing much galena, with large quantities of arsenic, and extremely difficult to work. The impression appears to be that it must be worked by a fire process, instead of the mill process usually employed. We condense the above from a correspondent of the *Register*.

SILVER MOUNTAIN.

Considerable activity appears to be manifested, at this time, in the Silver Mountain district. According to the *Bulletin*, published there, an arrangement has recently been made, or is about being consummated, for running a tunnel to prospect several parallel ledges, among which are the Wisconsin, which will be cut at 250 feet from the surface; the Napa at 344; the El Eorado at 475, and the Sierra Nevada at 850. The total length of the tunnel will be 826 feet; the total cost, $10,479, a trifle below $13 per foot, which will be properly apportioned among the parties benefited. From accurate surveys heretofore made, one of the ledges is the continuation of the I. X. L. These claims will all be tapped at depths sufficient to determine their value, gaining, as they do, nearly a foot in depth for one in distance as they enter the mountain.

The Monitor *Gazette* says that the saw-mill of Mr. Davidson, on Silver Creek, is about to be converted into a quartz mill; eight stamps and three Wheeler pans will be put into the mill, which will be in operation by September.

The reports from the Morning Star are still favorable. The agents in this city of a Swansea (Eng.) company, offered advances of $75 per ton on ores from this mine.

ESMERALDA.

The Esmeralda *Union* thinks the crisis for Esmeralda has now fairly passed, and looks confidently forward for better times. The Del Monte has commenced running with half her stamps. The company has ten hands employed in sorting over upon rock at the old dump. 150 tons have already been selected out for crushing. It is thought they will be able to gather in this way at least 300 tons of $40 ore. Some twelve or fourteen hands are also employed at the mine, who are now taking out some very fine ore.

The Antelope is also being worked by a few hands through the Young America tunnel with good success. The Cortez company are now taking out some first class rock through the Hamlet tunnel. The Golden Age and Empire prospecting shaft, has been under headway for some time, and is being pushed forward with all the energy that time and money will permit. The Wide West company's new prospecting shaft is in full blast, under the superintendence of Mr. Pope, who is sinking a shaft which will go down 500 feet below the tunnel, making 650 feet from the surface. The company is also erecting a steam engine with new hoisting works over the shaft, which will be ready for use in a few days, at which time the contractors will push the work forward night and day with three sets of hands.

Besides the above mentioned work, there is a large number of small parties of men working on the Last Chance. Middle and Silver Hills are taking out considerable pay ore. The Independent, Union and Bodie mills are now running with plenty of rock on hand.

OUR MINERAL EXHIBITION.

The proprietors of the MINING AND SCIENTIFIC PRESS have made arrangements with the managers of the Mechanics' Institute to take charge of all mineral specimens and curiosities which our friends in this city and in the interior may see fit to place in our care for exhibition at the coming Fair. By this arrangement, parties sending collections from abroad, with full descriptions, will have the benefit of having the same properly cared for and displayed, and their peculiarities explained by a faithful and competent attendant, who will be present during the Fair to exchange views and information by free discussion with various practical miners and scientific mineralogists. This, we believe, will be productive of much mutual good. We shall also publish a description of all articles furnished to our care and placed in the collections, to be circulated gratuitously to visitors.

Models of new machinery, inventions, and new discoveries, may also be sent to our care for display and illustration.

Those wishing special cases made for particular articles, or other extra arrangements for display, will have their orders filled by paying whatever extra cost may accrue.

All the steam transportation companies have liberally consented to forward, free, all articles intended exclusively for exhibition, consequently our friends will only need to prepay charges to the nearest point of railroad or steamboat connection, at which place Wells, Fargo & Cos. Express will receive them in charge and deliver to ourselves.

Address, For Mechanics' Fair, care of Dewey & Co., Mining and Scientific Press Office, San Francisco, per Wells Fargo & Co.

THE Dutch Flat *Enquirer* says that the newly discovered mining region at Meadow Lake, will at no distant day become the most famous for wealth of any yet discovered on this coast.

A VIENNA professor thinks he has discovered a new metal. He calls it idium.

Hiram Young, of Haverhill, Massachusetts, was killed lately by the explosion of a soda fountain which he was charging, and charged too much.

ABOUT 15,000 careless people in the United States, every week, neglect to put stamps on their envelopes.

The Patent Office has issued one hundred and sixty patents, in one day, lately.

It is Impossible for editors to know all the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides and the evidence of any error which may appear will be received in friendship and treated with respect.

American and Foreign Patents.—Letters Patent for inventors can be secured in the United States and foreign countries through the Mining and Scientific Press Patent Agency. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we refer to the names of numerous parties for whom we have obtained patents during the past two years.

Favorable to Inventors.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the Mining and Scientific Press, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

Payment in Advance.—This paper will not be sent to subscribers beyond the term paid for. The publishers well know that a good journal cannot be sustained on the credit system.

San Francisco:

Saturday Morning, Aug. 5, 1865.

Removal.

The Office of the Mining and Scientific Press has been removed to the old printing stand known as Waters Bros. & Co., southwest corner of Clay and Sansome streets, opposite the Niantic Hotel (being one block south of our former location), where we may now be found, with more commodious apartments and an extensive Job Printing Office.

San Francisco, April 10th, 1865.

Canvassing Agents.

We would call attention to the following named agents of the Mining and Scientific Press as gentleman worthy of the countenance of any community which they may visit, and assistance rendered them in their efforts, by friends and old patrons, or our brethren of the Press, will be acknowledged as a personal favor to us:—

Mr. Robert Lattimore—Amador and Alpine counties and the State of Nevada.

Thos. Poyzer, of Grass Valley, for Nevada, Yuba and Sierra counties.

Vanilla.—A successful effort, it is said, has been made to raise this plant in France. The experiment was made in the public gardens of the St. Bruno, and the quality is affirmed to be equal to the best imported from the West Indies. The seed of the vanilla is remarkable for its fragrant odor, and yields an oil which is much used as a flavor. It is also employed in medicine in place of valerian, all the virtues of which it is supposed to possess, while it is at the same time far more grateful to the taste.

Colfax is to be the name of the town to be built up at the next stopping place of the Pacific Railroad. This will be the nearest point on the railroad for the business of Grass Valley, Nevada, San Juan, Downieville, Iowa Hill, Forest Hill, Todd's Valley, Michigan Bluffs and Yankee Jims, which business will insure it permanence and stability.

To Break up Ice.—A plan has been devised to prevent the disasters which usually accompany the spring freshets at Albany, by sinking a number of torpedoes in the river, and so connect them by wires as to explode them simultaneously, and thereby break up the ice and prevent it from forming a dam to the downward flow of the surplus water.

Safety Lamp.—Monsieur Olanier has contrived a mining lamp so that the workman cannot open the flame to the air without extinguishing it. He considers that no lamp is safe if it can be used at all without the wire-gauze guard.

It is reported that the White Sulphur Springs, in Napa county, have been sounded on frequent occasions to a great depth, without finding bottom.

A New Flouring Mill will soon be in operation at Santa Rosa. It has been erected by William Hood, Esq., and will be a great public convenience to that section of country.

There is said to be a petroleum lake in Churchill county, Nevada.

THE FOUNDRIES.

In most of these establishments a large amount of work is going out and new orders are constantly coming in.

The Pacific has a great variety of work on hand, among which marine orders predominate. The propeller engine, noticed heretofore as building for a tug boat for the Columbia bar, is now rapidly approaching completion. A horizontal engine eighteen inches diameter and twenty-four inch stroke, was also building for the saw-mill of Pope & Talbot, of Puget Sound. Two sixty-horse power engines, with pumping and hoisting gear for a shaft 500 feet deep, are in process of construction for the Baltimore American Company, of Virginia City. A pair of engines, each twelve inches diameter and four feet stroke, intended for a stern-wheel boat for the river trade, were also under way. A twenty-stamp quartz mill, with German amalgamating barrels, building for a New York company and intended to be sent to Idaho, is the main feature of the mining orders for the month, besides which, however, there are several small mills for the California and Reese River mines.

Passing down by the Portland Boiler Works, our attention was attracted by two immense hollow cylinders lying inside, and we braved the noise and entered, when we were informed that the cylinders in question were the boilers of a new ferry boat now building for the Alameda ferry line. They are to be *return*-flue boilers, each being twenty-three feet long and seven feet in diameter, containing two furnaces, each six feet six inches by three feet eight. The proprietors of these works are also building a locomotive boiler for the Alameda Railroad Co., said to be the largest ever employed upon this road, the dimensions of which we did not learn.

At the Union Works, in addition to the locomotives mentioned some time since as forming an important feature, an unusually large number of mining orders are now being filled. One of the locomotives for the San Jose R. R. was finished and sent from the shop this week. Twenty horses were required to draw it from the shop to the station, and the display furnished the residents of First street with the most marked "sensation" that they have enjoyed for months. Another locomotive has been commenced here for the Sacramento Valley Railroad Company, being the fourth that has been built in this establishment, which will probably hereafter make locomotive building one of the permanent features of its business. The mining orders now being filled include the following: Two engines, one of eight and one of ten inches diameter of cylinder, for the New York and Grass Valley company, of the Union mine, of Grass Valley, with eight inch pump, six feet stroke, and hoisting gear complete, for a shaft 300 feet deep; one twelve and one eight inch engine, for the New York and Santa Fe Company, of Reese River, with ten inch pump six feet stroke, and hoisting gear complete, for a depth of 350 feet; one ten-stamp mill with five of Wheeler's pans, on a New York order, for Idaho; ten-stamp mill and all fixtures for Little York, Nevada County, Cal.; one twenty-stamp mill, with eight flat-bottomed Wheeler pans, for the Manhattan Company, of Reese River, with engine and fixtures complete; ten stamps, ten Wheeler pans and five settlers to be added to the already fine mill of Birdsall & Carpenter, of Dayton, Nevada, and a small engine and boiler with hoisting gear for the Old Colony Company of Reese River. In addition to all these, the proprietors are building a fine engine, fourteen inches diameter and thirty inches stroke, to drive the machinery at the coming Mechanics' Fair, besides doing a large amount of general work, including the forging of three nine and a half-inch shafts of hammered iron, for a sugar-mill, the remaining machinery of which is being built at another establishment in this city.

On our return, we dropped in for a moment at the Golden State Iron Works, where we were welcomed by the smiling face of Mr. Hanscom, who informed us that they were having all the work they could do, among which he mentioned the iron-work for six bridges for the Western Pacific Railroad Company. We were sorry that want of time prevented our making a personal observation of the work going on in this establishment, but as time waits for no man, not even a newspaper-man, we were compelled to hurry away without enjoying the privilege of seeing for ourselves.

From appearances we judge the other foundries to be equally busy, but we were prevented by want of time from visiting any of them.

"MOUNT LINCOLN."

We see it stated that A. B. Paul (Cosmos), of Gold Hill, Nevada, recently left that place with the portraits of Washington and Lincoln in his possession, which he intends to place upon the top of a lofty elevation in the Kearsarge district, and christen the same "Mount Lincoln," after having erected a suitable monument for the reception and protection of the portraits. The claim for the above named title is based upon the asserted fact that this is the highest point of land in the United States. We believe the mountain in question has already received a name from its discoverer, to whom belongs the right of naming it.

Mr. Paul may not be aware that there exists a lofty and prominent peak in Colorado, which for three years has borne the name of the immortal statesman whom he designs to honor, and which has equal if not superior claims to the title, to that possessed by the tall peak in Kearsarge. We have before us a lengthy and eloquently written description of the trip, by one of the party, which made the first ascent three years ago, christened the hight "Mount Lincoln" with appropriate ceremonies, and published a short account of the act at the time.

This mountain is located in the northwest corner of South Park, and forms a corner stone to the three great counties of Park, Lake and Summit. From its sides flow the headwaters of the three great rivers, Platte, Arkansas and Rio Colorado. By the instruments which the party took with them, it was found that the mountain was over 15,000 feet high, and in all probability higher than the Kearsarge Summit. The summit is represented as a conical peak of granite—a fitting apex for a monument, which rests upon the base of the mountain, like "Pelion on Ossa piled." Such is Mount Lincoln, which *is*. We copy from the description above referred to:

"Few ever beheld as magnificent a prospect as is seen from its summit. Colorado is spread at your feet. The South Park—sixty miles long and thirty wide—with its undulating hills, green meadows, and a thousand glittering lakes and brooks, dwindles to a pleasure garden. You look over Long's Peak, north, almost into Ducotah. You look over the plains of Utah, to the west, stretching towards the golden shores of the Pacific. You look over the Spanish Peaks, south, into New Mexico; and turning to the east, your vision wanders over Pike's Peak where the great plains seem to rise up like an emerald ocean.

Such is Colorado's monument to our dead but immortal President. From its side, the great rivers suck the nutriment which feeds both ocean, and upon which ride the nations' navies and the commerce of the world. A thousand storms swept over it, but in vain to level it. A thousand cataracts lash around its feet, but from its summit you hear not their murmurs. Lightnings and thunders glance harmlessly from its crest, but its foundations remain unshaken. Its base is clothed in evergreens—sublime wreaths, such as never hung on the tombstones of emperors. Its top reaches so near the heavens as to attain the spotless purity of eternal white—bright emblem of immortality.

Let, then, other States and other people raise their monuments of patriotism and of art, to gild the fame of the great dead; but Colorado can point in all time to this proud monumental mountain, which rears itself as the gigantic spire of this continental vertebræ—she can point it out hundred of miles away, to the traveler as he travels from ocean to ocean, on the future international railway, and exclaim with the old Latin poet Ovid: "*Exegi monumentum aere perenior, atque altior Pyramides.*" I have erected a monument more enduring than brass, and loftier than the Pyramids.

INCREASING COMMERCIAL VALUE OF PETROLEUM.

As a proof of the great and increasing commercial value of petroleum and its products, we may cite the fact that a single French company has, within the past two years, manufactured from it $1,200,000 worth of the new aniline colors. They have already supplanted quite a number of substances heretofore employed as dyes. Some of the aniline colors, especially the blue, are sold for their weight in silver, which, by the way, is not quite equal in price to the ancient Tyrian purple, which is said to have been sold for its weight in gold.

British inventive genius, as well as our own, is at the present time most actively employed in devising new methods for turning to advantage the various products to be derived from our oil wells. Quite a number of patents have already been taken out for employing it in ordinary heating purposes, in cooking and for warming rooms, and with a very fair probability of introducing it into quite general use in that direction. The great object in view, however, is to employ it economically for making steam. The inventors of England and America are now running a lively race, to determine who shall soonest realize the problem. The practibility of the theory appears to be pretty generally acknowledged; the interest in the event is as to who will have the honor of winning in the race. We shall watch with much interest for future developments, and report whatever transpires.

The latest effort in this direction has been made by Mr. C. J. Richardson, at Woolwich, England, who, with his improved petroleum boiler, has succeeded in evaporating 150 gallons of water with fourteen gallons of petroleum. It appears that with the improvements, he vaporizes, on an average, at the rate of 12¾ pounds of water per one gallon of petroleum, and Mr. Richardson anticipates reaching fourteen or fifteen pounds to the gallon of petroleum. For such early trials, he considers the results hitherto obtained as extremely satisfactory. The oil is under perfect control, there is no danger whatever, and the boiler is very easily worked.

The Faucherie Mill.—Messrs. Gerard & Faucherie are putting up one of their mills in Gold Hill, Nevada, at a point just below the Petaluma mill. This, it will be recollected, is constructed on the crushing or masticating principle, by which the rock is reduced to a proper fineness from the pans in being put through a pair of vibrating jaws. The crushing by this machine is a dry process, and it is claimed that a great saving in gold is thereby made over stamping, which must be done in water, in all the ordinary constructed mills.

Proposed National Mining Convention.—We have received a circular from Gilbert E. Currie, editor of the *American Mining Gazette*, 79 Pine street, New York, recommending a National Convention of miners, and asking for hints or suggestions from officers of mining companies. We are not informed of the precise object of the Convention, but there can be no doubt but that much good could be done by holding such a convention whereia miners of all classes might confer together.

A Flouring Mill in Carson Valley.—The people of Nevada have determined to take the initiatory steps to free themselves from the flour speculators of this city. They have commenced the erection of a flouring mill in Carson Valley, and will soon be ready to turn out the "staff of life." The farmers of Carson Valley are this year raising large crops of wheat, which will soon be ground to flour in this mill. The proprietors of the mill will also lay in a large stock of California wheat, so that the mill can be kept in constant motion.

The Kearsarge Mines.—The Mariposa *Free Press* intimates that the newly discovered Kearsarge mines are not likely to realize the anticipations of the discovers. It says that silver cannot be found except in one claim, and but little in that. This report "lacks confirmation."

FURTHER FROM THE SANTA BARBARA METEOR.—Mr. C. D. Gibbes, says the Stockton *Independent*, of July 28th, who recently returned from a tour in the oil regions of Tulare county and along the Coast Range of mountains, says that on the evening of the 12th instant he heard a tremendous report, much louder than a heavy cannon, and for several seconds the sound echoed, re-echoed and rumbled through the mountains gorges—the fading noise resembling thunder in the distance. He thinks it was the explosion of an ærolite, such as is supposed to have caused a similar report near the San Joaquin river, about twenty miles from the city, nearly two months ago. The loud report of which Mr. Gibbs speaks, was heard in the evening, about the same hour that a brilliant meteor was seen in Santa Barbara. The Santa Cruz *Sentinel* says that a meteor was generally observed throughout that section at the same time, and that parties from Watsonville report that it was near that place. A meteor about one-third the size of the full moon and as brilliant as the sun at mid-day, was seen east of Virginia City. It is said to have moved in a southeast direction, while the one seen at Santa Barbara is reported to have moved from the southeast to northwest. There must have been several meteors on the rampage, or one cavorting through the air in different courses on its own hook. *Exchange.*

The sound heard by Mr. Gibbes was no doubt caused by the bursting of the Santa Barbara meteor. The report that a meteor was seen moving in an opposite direction from that which was noticed by Dr. Jackson, must be a mistake, and doubtless arose from the misapprehension of the observer, or an oversight of the compositor who put his manuscript in type. We should be pleased to hear from Mr. Gibbes more particularly, with regard to the locality at which he heard the explosion, its direction, etc. His observations would be very valuable in the researches which are being made with regard to this interesting visitor from distant space.

CHANGE IN ENGLISH RIFLE PRACTICE.—Late English papers say that all rifles for military use in the line, will hereafter be loaded with explosive shells instead of solid bullets. The master armorer at the Springfield Armory, E. S. Allin, has invented a new breach-loading musket so acceptable to the Ordnance department that 5,000 muskets of the old style are to be forthwith remodeled to the new.

ROAD TO THE OIL REGIONS.—A company has been organized in Humboldt county to construct a plank road from the Mattole river valley to Humboldt Bay. The early completion of this undertaking is a matter of the utmost importance to the oil interest of that region, and it is said that work upon the same will be pushed ahead with the utmost dispatch.

PHOTOGRAPHIC IMPROVEMENT.—The new London process of photographing on wood extends the art most successfully to decorative purposes, indefinitely and cheaply multiplying ornaments in fresco, panels, pictures, and especially grainings, which can be transferred to new surfaces with the nicest accuracy, and cannot be eradicated any more than common paint.

THE swiftest ocean steamer in the world is said to be now fitting for sea, at Rochefort, France. She is of large size, her dimensions allowing her to receive on board and convey a small *corps d'armee*. It is expected that she will perform one hundred leagues a day, and by her extraordinary speed render great service when time is an object.

GOLD MINING IN AUSTRALIA.—A fresh impetus has recently been given to gold mining in Australia, by the recent discoveries of a lode which it is thought will yield one and a quarter million of dollars a year.

FOR SALE.—The first nugget of gold discovered in this State, is offered for sale by the possessor, Mr. Wiemar, now a resident of Sonoma. It weighs but $4.50, and nothing but the poverty of the one who discovered all this wealth, is the cause of its being offered for sale.

SUTRO'S DRAIN TUNNEL.—This important enterprise is said to be now fairly under way. The importance of this work can scarcely be estimated. Hon. W. M. Stewart has been elected President of the organization.

IRONCLADS—A QUERY.

A Grass Valley correspondent writes us as follows:—A number of your subscribers desire me to ask you for reliable information as to the *largest* and *strongest* made ironclad war vessel afloat. There has been quite a dispute between parties here as to England or America having the strongest ironclad. A Scotch gentleman says that England has lately launched two ironclads, larger and stronger, or heavier plated, than the United States Government have ever made or owns. I suppose Monitors are called war vessels, although they are for harbor defence, and I do not know whether England has ever built any. At any rate, your decision as to the strongest and largest "war vessel," will satisfy the parties. An answer through the columns of the PRESS would be thankfully received. P.

The Dunderberg, constructed at New York, and a combination of the monitor and broadside build, according to the best of our recollection, is the largest ironclad afloat. England has never yet launched any vessel of the monitor build; although, if we are not mistaken, she has one, if not two, of that class now on the stocks. All the ironclads heretofore constructed by either the English or French have been frigate built, with broadside guns, a style of build which will not admit of a heavier plating than five or five and a half inches. Such vessels are no match for our first-class monitors, which carry nine and a half inch plating—a weight of iron which would sink any broadsider. No man, living or dead, has had more experience in the effectiveness of ironclads than Admiral Porter, of Fort Fisher notoriety; and the Admiral says that with the double-turreted monitor Monadnock he can whip any ship in the world. We know of no better authority upon which to decide that portion of our correspondent's query.

THE well of the Pioneer Oil company, near Los Angeles, is now four hundred and forty-five feet deep. On the 29th of July there were over one hundred feet of oil and water in the well. The proprietors are very sanguine of shortly striking oil in paying quantities.

THE filthy pool of politics in this State, seems to be stirred up from its very dregs. The manner in which the present State canvass is being carried on, is disgusting to every manly instinct.

A CURIOUS VINE.—A curious vine, says the *Nevada Transcript*, has recently been found in some of the gardens in this vicinity. It is a parasite and readily attaches itself to other plants. The vine is about half the size of an angle worm, is of a light color, and appears very tender, but it is almost impossible to kill it. One of these vines has fastened itself upon Judge Beldon's potato tops, and it climbs from one plant to another without difficulty. If broken into pieces and thrown upon the plants it soon winds itself around the stems, inserts its feeders into the plant, and shoots out its tendrils in every direction, losing none of its vitality by the rough treatment. We are informed that many vines of the same kind grow up along the Yuba. However this may be, the creeping parasite will furnish interesting study for the botanist.

POSTPONEMENTS.—We would again call the attention of Secretaries to a certain point of the mining law, too commonly overlooked, viz: The requirement that all postponements must be added previous to the expiration of the regular publication of assessment or sale notices.

HANSCOM'S CRUSHER.—One of these patent quartz-crushers was put into operation at the Granite mill, in Gold Hill, a few days ago, and is said to work most admirably. Mr. Parks informs the Gold Hill *News* that it is one of the most labor-saving machines he ever saw.

OUR PAPER BY EXPRESS.—Owing to the fact of Wells, Fargo & Co requiring publishers to pay 2½ cents per copy in advance on papers sent to subscribers in the interior, we are obliged to make our subscription terms by express $6.50 per annum. Our recommendation to newspaper patrons is to patronize the U. S. mail in all cases practical, as it is the cheapest and most reliable conveyance.

Printer Boy Wanted.

An active and reliable boy, about sixteen years of age who wishes to learn the printing business thoroughly, in all its branches, can obtain a situation at this office upon presenting suitable recommendations.

MINING SHAREHOLDERS' DIRECTORY.

List of Notices of Meetings, Dividends, Assessments and Delinquent Sales.

Comprising the Names of Companies, District or County of Location, Amount of Assessment; Date of Meeting, Delinquent Advertisement and Sale, and Amount and Time of Payment of Dividends.

COMPILED FOR EVERY ISSUE.

Advertised in the Mining and Scientific Press and all other San Francisco Journals*.

NEW ENGLAND KITCHEN.

The Proceeds of the Kitchen will be applied as a Building Fund for a "Sailor's Home."

The undersigned have been charged with the duty of establishing and conducting the "NEW ENGLAND KITCHEN" during the Industrial Fair, to commence on the 10th of August, at the Pavilion.

We shall reproduce the customs and costumes of the last century, and illustrate as far as possible the domestic life and habits of our ancestors. The OBJECT will commend itself to every philanthropist, as its basis is UNIVERSAL BENEVOLENCE, irrespective of sect or country. Social gatherings of the olden time will form an attractive feature, viz: "Spinning Bee," Apple-paring, Donation Party, Singing School, Wedding Party, etc., etc. The room is of sufficient dimensions to accommodate a large number of guests, and the table for their entertainment will be supplied with every variety, among which the following dishes peculiar to New England: Pumpkin, Apple and Chicken Pies, Indian Pudding, Johnny Cake, Pork and Beans, Brown Bread, Doughnuts, Cider, Apple Sauce, etc. In order to portray a life-like and truthful presentation of the "times" of '76, the Committee have incurred great expense in fitting up necessary arrangements, and therefore earnestly petition from the public donations or loans of relics, jewelry, wearing apparel, furniture and whatever else they can find of ancient date. All loans will be carefully returned. Cash contributions, which may be enclosed to Mrs. C. E. Cogswell, Treasurer, No. 610 Front street, will be thankfully received. Friends, in the city or country, sending contributions, will please have them plainly marked "NEW ENGLAND KITCHEN, Pavilion, corner Geary and Stockton streets." The several transportation companies have generously consented to transport articles marked for the NEW ENGLAND KITCHEN free of charge. Communications may be addressed to the New England Kitchen, care of G. W. Conkling, 714 Montgomery street, and notices of contributions so addressed will be sent for.

Executive Committee.

MRS. R. H. LAMBERT, Chairman.

Mrs. C. D. Knights,	Mrs. C. E. Cogswell,
Mrs. E. T. Schneck,	Mrs. J. McLain,
Mrs. L. A. Austin,	Mrs. G. W. Conkling,

1852. 1865.

Thirteenth Year of Publication.

THE GOLDEN ERA.

Founded in 1852.

The oldest Weekly Paper in the State, permanently established, and more widely circulated at home and abroad than any other on the Pacific Coast. In California, the Atlantic States, and throughout the entire field of its great and rapidly increasing circulation, THE GOLDEN ERA is universally regarded as a Literary and Family Journal of unequalled excellence. Among its contributors are all the best writers on this side of the Continent, and correspondents of distinguished ability in New York, Paris and London.

Liberal Terms to Clubs.

THE GOLDEN ERA is furnished to CLUBS at the following rates: Three Copies, one year, Ten Dollars; Five Copies, one year, Fifteen Dollars; Ten Copies, one year, Twenty five Dollars. An extra copy will be forwarded, free, for one year, to the person sending a club of five or ten subscribers.

THE GOLDEN ERA is now enlarged by the addition of eight columns to its pages—and presents fifty-six columns, containing the greatest possible variety of Valuable and Entertaining, Original and Selected Matter, all combining to render THE GOLDEN ERA a Literary and Family Journal of surpassing interest and attraction; a Welcome Guest in Cottage and Cabin; the favorite at the fireside in City and Country, the most useful, agreeable altogether desirable publication for California readers and their kindred and friends in the Atlantic States, Europe, and elsewhere. Every Household in the Mountains and Valleys, the Cities, Towns, and Mining Camps of California and throughout the Pacific States and Territories, should receive and welcome THE GOLDEN ERA as a regular weekly visitor.

Serial Romances in The Golden Era.

The most popular Novels of the present day published as Serials, from week to week, in the GOLDEN ERA, from advance sheets, simultaneously with their appearance in the English and Atlantic Periodicals.

Among the contributors to the GOLDEN ERA are all the prominent writers of Literary Repute in California and on the Pacific Coast, also correspondents and contributors of distinguished ability in the Atlantic States and Europe, comprising an array of Talent and Genius unapproached by any Literary Journal in California, the Atlantic States, or Europe.

IN THE GOLDEN ERA,

"THE FAIR LILIAS;"

Or, "LIFE IN DEATH,"

A New Story, by PIERCE EGAN, Author of "The Poor Girl," "The Flower of the Flock," "Lady Maud," "The Snake in the Grass," "Such is Life," Etc.

PIERCE EGAN is undoubtedly the most fascinating and attractive Novelist of the age. His stories are eagerly sought for, read and admired by hundreds of thousands in England and America. "THE FAIR LILIAS; or, Life-in Death," surpasses, in exciting interest and thrilling situations, all of the productions of the celebrated author, and is Pierce Egan's masterpiece.

THE GREAT SERIAL,

"OUR MUTUAL FRIEND,".....By Charles Dickens.

TO ADVERTISERS.

Best Advertising Medium.—The Golden Era is the oldest Weekly Journal in California, and indisputably enjoys by far the largest circulation in the city of San Francisco and in the interior of the State.

THE GOLDEN ERA

Is universally read in every city, town, village and mining and agricultural precinct in California, and offers unusual and unequalled advantages to those who desire to bring their business prominently before the community. Only a limited space is devoted to advertising. All advertising pages are also largely occupied with fresh and interesting reading matter, and no advertisement can escape attention. The charges for advertising are not so large, proportioned to the benefits derived, as those of other papers. Liberal terms will be made with those who advertise for three or six months, or by the year.

BROOKS & LAWRENCE,

GOLDEN ERA BUILDING,

No. 543 Clay street, near Montgomery, San Francisco.

The highest priced labor outside of this Union is that of Canada—next highest in price comes that of Europe. The wages of the Mexican peon are miserably small—the people of India are satisfied with a dollar a month—wages in Africa are little if any higher—the Cuban negro receives even less of food and clothing than has generally been given in our Southern States.

A large portion of the Confederate debt repudiates itself. It was made payable, "three years after the treaty of peace is signed between the United States and the Confederate States of America."

The vicissitudes of a sailor's life are painfully exhibited in the recent returns to the English Board of Trade. Of forty-seven thousand seamen whose names are recorded during the twelve years ending 1864, no less than twenty thousand died from drowning, and more than two thousand from accidents of various kinds.

An oil well near Vernon, Ind., has caught fire, and burns with a blaze of about twelve feet in hight, accompanied with dull explosions at short intervals.

SANTA CLARA COLLEGE, S. J.,

SANTA CLARA, CAL.

Conducted by the Fathers of the Society of Jesus.

The FIFTEENTH ANNUAL SESSION of this College will commence on

Monday, August 28th, 1865.

TERMS—Tuition in the Classical and Scientific Department; Boarding and Lodging; Washing and Mending of articles washed; School Stationery; Medical Attendance and Medicine; fuel, light, baths, etc., per session of ten months..... $350

For further information and catalogues, apply to the President of the College, or to Rev. A. Maraschi, St. Ignatius College, Market street, San Francisco.
3vII REV. A. MASNATA, S. J., President.

SAN JOSE INSTITUTE

—AND—

COMMERCIAL COLLEGE,

LOCATED AT SAN JOSE, CAL.

MALE AND FEMALE.

The next session of this Institution will commence on

Monday, July 31, 1865.

An experienced and competent BOARD OF INSTRUCTION is engaged, and every facility will be afforded for a thorough course of study, both in the Academic and Commercial Departments.

Catalogues, containing full particulars, furnished upon application to F. GATES, Director,
25v10-3m San Jose, Cal.

BLASTING

POWDER.

EDWARD H. PARKER,

No. 224 California Street,

Agent of the

Hazard Powder Company.

EUREKA

PATENT BLASTING POWDER.

Price $3.50 Per Keg.

Office, southeast corner Battery and Commercial streets.

Room No. 9, with San Francisco Chemical Works.

CHAS. A. JAMES.....AGENT

For underground blasting in Tunnels, Mines, etc., this Powder possesses very great advantage—on account of it giving out scarcely any smoke after the blast. By using the same quantity in bulk as the gun blasting powder, you produce a much greater effect. 2v11qy

THE PACIFIC IRON WORKS,

First & Fremont Sts., between Mission & Howard, San Francisco.

The proprietors of the above Works invite the attention of all parties interested to their greatly improved and unequaled facilities for manufacturing Steam Engines and Boilers, both Marine and Stationary, of any required size and pattern, Quartz Mills, Amalgamating, Pumping and Hoisting machinery of the most approved construction, Flour, Saw and Sugar Mills, Water Wheels, &c., &c. Our pattern list is most complete and extensive, embracing the late improvements in all classes of machinery adapted to use on this coast. We would call especial attention to the fact that we have secured the exclusive right of manufacture for the Pacific Coast of the celebrated Greene Engine, conceded to be the most economical and perfect working Engine now in use. We are also exclusive manufacturers of the celebrated

Bryan Battery, Varney's Amalgamators and Separators, Ryerson's Superheated Steam Amalgamators and Rotary Crushers, Stone Breakers, &c. Orders respectfully solicited.

MINERS' FOUNDRY

—AND—

MACHINE WORKS,

First St., between Howard and Folsom Streets,

SAN FRANCISCO.

EVERY description of Iron and Brass Machinery, the BEST and MOST ECONOMICAL, manufactured in the State of California, will be furnished with dispatch at the MINERS' FOUNDRY AND MACHINE WORKS, such as

Steam Engines and Boilers, Flour, Saw and Quartz Mills,

Machinery, Mining Pumps, Amalgamators,

Retorts, Etc., Etc.

Particular attention will be given to the manufacture of Machinery in Sections designed for places of difficult access. Various models of Quartz Crushers, Amalgamators and Water Wheels—some in operation and on exhibition.

*** Parties desiring to test their ores practically, in small quantities, will be afforded ample facilities, FREE OF COST.

All parties desiring accurate and highly finished drawings and superior Machinery, at most reasonable rates, are cordially invited to call before contracting elsewhere.

Vulcan Iron Works Company

[ESTABLISHED 1850.]

First, Natoma and Fremont Streets.

IRON FOUNDERS,

Steam Engine and Locomotive

BUILDERS,

Boiler Makers, and Workers in Sheet Iron, Brass and Copper.

These Works have lately been increased by the addition of new shops on Fremont Street, doubling the capacity of the original establishment. Their facilities for turning out machinery promptly and efficiently, are now unequaled in the State. Their Boiler Works have also been enlarged correspondingly.

The Company are prepared to execute orders for all classes of Machinery and Boiler Work, such as

Mining, Steamship, and Steamboat Machinery,

Railroad Machinery, Locomotives, Car Trucks, Car Wheels, Housings and Irons; and Flouring Mills, Quartz Mills, Sugar Mills, Saw Mills,

Manufacturing Machinery of Every Kind.

Sole Manufacturers of

HEPBURN & PETERSON'S REDUCING PAN AND AMALGAMATOR

BETH'S AMALGAMATOR;

HERSE & MOORE'S IMPROVED HOWELL QUARTZ CRUSHER;

BAUX & GUIOO'S AMALGAMATOR AND SEPARATOR;

FAUCHERY'S QUARTZ GRINDER AND WATER WHEEL;

JONVAL'S IMPROVED WATER WHEEL;

STEVEN'S PISTON PACKING RINGS.

They have also a large assortment of Patterns for Pumping and Hoisting Machinery, Gearing, Pullies, Water Mill Irons, Hydraulic and Screw Presses, Retorts, Furnaces, Grate Bars, House Fronts, Ornamental Fence Posts and Paling, Stove Ranges, etc., etc.

Quartz Stnupers, Shoes and Dies, of the best Hard Iron. Quartz Screens of Russia Iron Punched to Order. 27

IMPORTANT MEDICAL EXPERIMENTS.—Among the recent discoveries noted, are new methods of administering remedies. These as a class are generally, perhaps too generally, viewed with suspicion by the faculty as so many new forms of empirical speciality in treatment. The error, however, is not in examining but in too hastily or exclusively adopting new methods. Every lover of true science yields to a false professional pride who forgets that the injunction "Hold fast that which is good," comes after the precept to "prove all things." Both the above new classes are under the general rank of progress aiming to reach the circulating system by some other channel than the digestion. In one small sprinje discharges the medicine through a sharp pointed nozzle that punctures the skin and injects the prescribed quantity much after the manner of a snake bite, or the sting of an insect, the discoverer claiming that the proof of the noxious influence so readily communicated, furnishes the hint that remedial results may be similarly reached. The other discovery indulges in the honorous title "Nephetherupy," and consists of reducing the remedial agent to a cloud or spray to be inhaled; a modification of the familar vapor system, and is applicable to all classes of liquid medicinal preparations, especially in throat and lung diseases.

FEMALE ASTRONOMER.—Miss Maria Mitchell is to be Professor of Astronomy in the Vassar Female College, in Poughkeepsie—a position which her acquirements in science admirably fit her to fill. She is widely known in the scientific world as the discoverer of a comet known by her name and for which she received a gold medal from the King of Denmark, together with the still more honorable approbation of the savans of Europe.

AN international exhibition of fish will be held at Bergen, the coming summer, embracing fish of all kinds from the whale to the minnow, fishing tackle, preservatives of fish, models of boats, barrels, boxes, &c.; and it is believed that our own fishermen will appear at it.

AN "Exhibiton of Insects" is to be the next novelty in Paris.

THE

WHEELER & RANDALL Grinder and Amalgamator.

In the engraving herewith exhibited, A represents the Rim of the Pan; B, Cross Frame; C, Legs; D, Gear; G, Driving Pulley; H, Muller; I, Driver; K, Dies; L, Shoes; M, Hand Wheel; N, Jam Nut, and O, Wings or Guide Plates.

The attention of the Public is respectfully called to these facts:

1st. That the Mechanical work accomplished by differently formed grinding plates, having the same diameter, weight, hardness, and revolving at the same velocity, is as follows, to wit:

The Mechanical Work of plane, circular plates of the usual ring form, is ninety-eight.....98

The Mechanical work of conical plates of the most approved form, is one hundred and ten.....110

The Mechanical work of Tractory-formed plates, as introduced in the invention of Wheeler & Randall, is one hundred and seventy-seven.....177

That is, the Tractory-formed grinding plates will reduce one hundred and seventy-seven tons of ore, the conical grinding plates one hundred and ten tons, and the plane circular grinding plates ninety-eight tons, to the same degree of fineness in the same time. Those using this invention certify that they thoroughly reduce five tons of ore, as it ordinarily comes from the wet battery, per day in each pan, four feet diameter, the muller making sixty-five revolutions per minute.

2d. That as a whole, the Wheeler & Randall Grinder and Amalgamator is one of the most simple, compact, substantial, convenient and efficient pans in use.

☞ Patent applied for.

MANUFACTURED AT

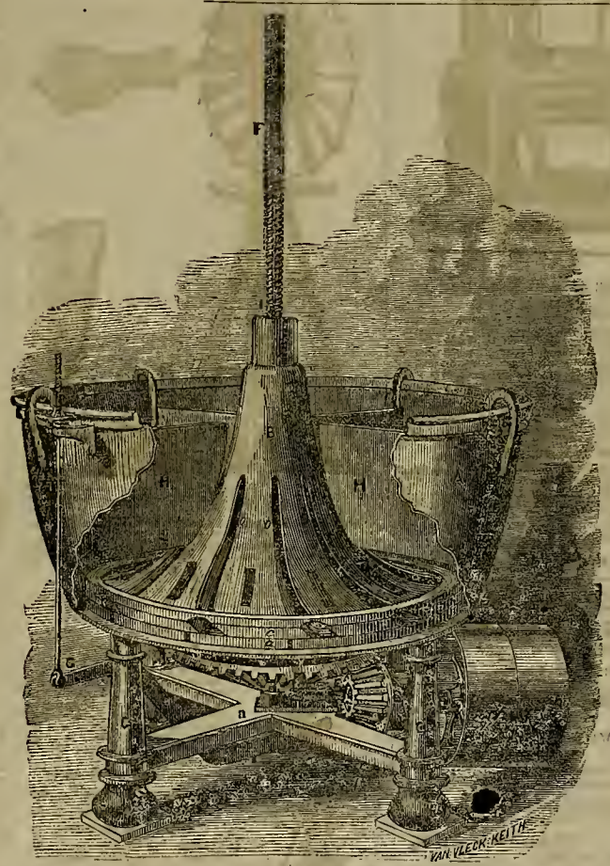
OREGON IRON WORKS.....Portland, Oregon.

WHEELER & RANDALL, Inventors.

SAN FRANCISCO, JUNE 13, 1865.



THE EXCELSIOR GRINDER AND AMALGAMATOR.

In the engraving herewith presented, A represents the Rim of the Pan; B, Muller; C, Legs; D, Cross-Frame; E, Gearing; F, Screw; G, Lever; H, Dash-Boards; I, Key; *a*, Dies; *c*, Shoes, and *o*, Openings,

The relative grinding capacities of "The Excelsior" Grinder and Amalgamator, of the Flat Bottomed Pan, and of the Conical Pan *when properly constructed*, are respectively 177, 98 and 110.

That is, the respective mullers being of the same diameter, same weight, same hardness, and running at the same velocity, "The Excelsior Grinder and Amalgamator" will reduce one hundred and seventy-seven tons of ore, the Flat Bottomed Pan ninety-eight tons, and the Conical Pan one hundred and ten tons to the same degree of fineness in the same time.

The wear to the Shoes and Dies at their grinding surfaces in the Excelsior Grinder and Amalgamator, is perfectly uniform, thus securing evenness of reduction to the pulp, as well as steadiness of motion to the muller. Uniform wear of the grinding plates has been attained in no other than that of the Tractory form—nor can it be.

Another property of excellence in this machine is that the metal or substance to be amalgamated passes *direct* from the grinding surfaces into the quicksilver; thus excluding the possibility of its becoming coated with any foreign substances, after having been burnished. It is truthfully said "that the Tractory-formed Pan as a Grinder has no equal, and as an Amalgamator no superior."

As a whole, it is far superior to any other pan in use.

MANUFACTURED AT THE

Union Iron Works and Golden State Iron Works,

WHEELER & RANDALL, Inventors.

The undersigned having had several years of experience in practice quartz mining operations, will ever take great pleasure in furnishing parties interested in mining and machinery any desired information which they may possess.

Let it be Known.—When any of our readers respond (by letters of inquiry or by the purchase of articles) to advertisements found in our columns, they will confer a favor, not only upon us, but upon the advertiser, by mentioning the fact of having seen the notice in our paper

STATE SCHOOL FUND.—The total amount of State school money, says the California *Teacher*, apportioned for the year ending August 31st, 1865, is $168,956.67. The amount for 1864 was $132,217.86, being $36,738.81 less than the present year. In consequence of the decision of the Land Office, in Washington—that School Land Warrants located on unsurveyed Government lands are not valid, no interest has been paid the past year by the holders of such warrants. This will account for the fact that the School Fund is less than was anticipated.

BULLION.—The bullion shipments from the Gold Hill office of Wells, Fargo & Co. were $260,000 during the month of July.

Machinery.

ATTENTION, MINERS!

LINSCOTT'S PATENT CHAMBER DRILL.

Great Improving in Blasting.

W. B. LAKE

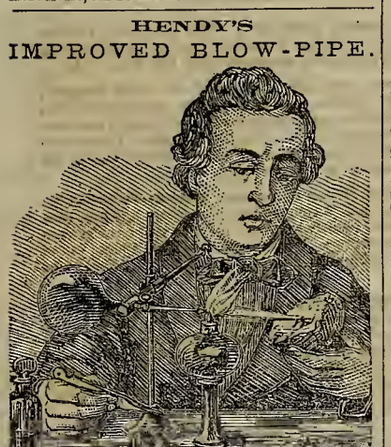
Has taken the sole agency for the manufacture and sale upon the Pacific Coast of this valuable article, the object of which is to cut a chamber at the bottom of an ordinary drill-hole (as will be understood on reference to explanation of cut), giving more than double the effect in blasting.

D is the shaft of drill, forty-five inches in length. B represents the cutters extended after a blow has been given. The lower portion of B is a guide plate ⅛ inch thick, holding the cutters in place and allowing them to glide in and out freely, the surface of the rock preventing their falling out and securing their return. When closed the edges of the cutters protrude about 1.16 inch only. As the drill descends the force slide A strikes the bottom of the hole and a slight blow drives its wedged shaped head, C, upward, forcing the cutters upward and outward by double acting wedge power. Face of the cutters 1¾ inches in length, diamond edged. There arn but four pieces in all, two of which, the cutters, are detached.

Price of one drill with two sets of cutters, $35. Extra cutters, $5 per set.

Persons wishing further information about the working of this labor and money saving article, will please send for circulars containing full particulars, which will be furnished gratuitously upon addressing W. B. LAKE, General Purchasing and Advertising Agent, Room 28 Government House, San Francisco. 2v11

HENDY'S IMPROVED BLOW-PIPE.



This Convenient Helpmeet

—TO THE—

ASSAYER, CHEMIST, DENTIST, JEWELLER, PROSPECTOR AND MILLMAN,

Can now be procured, at the Patentee's price, by sending your orders, by mail or otherwise, to the

Office of the Mining and Scientific Press.

This article was more fully mentioned in the PRESS of April 15th, 1865. Since that time, however, Mr. Hendy has made a further improvement by attaching a rubber hose between the mouth-piece and the pipe, enabling the blower to change his position without disturbing the direction or constant accuracy of the current on the object upon which it is turned. The main portion of the blow-pipe is made with a joint, at which a valve is placed, which is opened when the operator blows and closed immediately when he ceases. By this arrangement the little bag or bladder is readily filled at a single breath, and with very little exertion. When so filled, a continuous current of air is forced from the nozzle of the pipe by the mere contractive force of the gutta percha. This force is uniform until the air is very nearly exhausted. The current may be easily varied or entirely cut off by gently pressing the fingers upon the neck of the bladder above the nipple to which it is attached.

Price, Complete.....$5.00.

CALL AND EXAMINE SAMPLES.

Sent by mail, if desired. Address

DEWEY & CO.,

HANSCOM'S CRUSHERS,

Made in sizes suitable for Breaking Quartz for Batteries; Rock for macadamizing or concrete; Copper Ore for sacking, sampling, or concentrating; also, for crushing Quartz for Arastras and Orinders. The small sizes make a most efficient Crusher for Prospectors, and are arranged to be run by Hand, Horse, Water or Steam Power. For further information address W. W. HANSCOM.

1 Golden State Iron Works, San Francisco.

Hepburn & Peterson's AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

☞ This Amalgamator may be seen in operation at the European Metallurgical Works, Bryant St. bet. 3d and 4th. [Illustrated in the Mining and Scientific Press, April 9th, 1864.] HEPBURN & PETERSON.

nov8 3m*

NOTICE TO MINERS.

NEW QUARTZ MILL.

THE ATTENTION OF ALL ENGAGED IN MINING IS called to Fauchery's unrivaled Mining Machines, consisting of his celebrated Turbine Water Wheel, which took the First Premium at the Mechanics' Fair at San Francisco for 1864; his Crescelle Quartz Crusher; his Pulverizer; and his Improved Freiberg Amalgamating Barrel; altogether forming the most complete and effective Quartz Reducing and Amalgamating Mill now in use. This mill can be put up at less cost, run with less power, and accomplish more work, than any other now in use.

B. Fauchery and F. Genard

Having established a Quartz Mill and Metallurgical Works, are now prepared to crush, roast amalgamate, assort, cupelate, and give correct analysis of ores. We are also prepared to give our attention to the building and constructing of Quartz Mills and Furnaces, and give directions for working Mines; and also to instruct persons in all branches appertaining to Mining Works, at No. 23 Fremont street, near Market, Railroad Foundry building.

F. GENARD, Metallurgist. **B. FAUCHERY,** Engineer.

24v9

WM. BRUCKNER'S Furnace for Roasting Ores.

Now in Operation at 416 Market street.

This Furnace, which is portable, and can be carried on mule-back, undertakes to roast without employing any labor whatever for the operation of stirring, which is accomplished by machinery that may be driven by steam or any other motor. It consists of an iron cylinder, which, being suspended by chains, in rotating mixes and stirs the ore, by an internal apparatus, quicker and more perfectly than can be done in any other furnace hitherto known in metallurgy. It can be applied to any kind of ore, and the rapidity and perfectedness of its operation, the great saving in fuel, and the entire saving of the labor usually required for stirring the ore, together with the small cost of constructing it, renders this furnace a most

Economical and Practical Invention.

The Furnace may be had of two sizes—one being nine feet in length and holding fourteen hundred pounds, and the other six feet in length, and holding eight hundred pounds. One horse power is required to drive the machinery of the large sized furnace, and three-fourths of a horse-power for the smaller size. Parties wishing to erect such furnaces will please communicate to

W. BRUCKNER,

5v10 No. 416 Market street, San Francisco.

BLAKE'S QUARTZ BREAKER

Is now extensively used for breaking hard masses of

Quartz or Ores

To a size suitable for stamps. These machines are patented, and are in practical operation in

CALIFORNIA, AUSTRALIA, WASHOE, ENGLAND, FRANCE,

—AND—

THE ATLANTIC STATES.

These Machines, or circulars containing further information regarding them, may be obtained of the undersigned. Address,

Box 2077 San Francisco Post Office.

CHAS. T. BLAKE, Idaho City. E. TYLER, Michigan Bluff. WM. P. BLAKE, San Francisco.

4v10

VARNEY'S PATENT AMALGAMATOR.

These Machines Stand Unrivaled.

For rapidly pulverizing and amalgamating ores, they have no equal. No effort has been, or will be, spared to have them constructed in the most perfect manner, and of the great number now in operation, not one has ever required repairs. The constant and increasing demand for them is sufficient evidence of their merits.

They are constructed so as to apply steam directly into the pulp, or with steam bottoms, as desired.

This Amalgamator Operates as Follows:

The pan being filled, the motion of the muller forces the pulp to the center, where it is drawn down through the aperture and between the grinding surfaces. Thence it is thrown to the periphery into the quicksilver. The curved plates again draw it to the center, where it passes down, and to the circumference as before. Thus it is constantly passing in a regular flow between the grinding surfaces and into the quicksilver, until the ore is reduced to an impalpable powder, and the metal amalgamated.

Settlers made on the same principle excel all others.—They bring the pulp so constantly and perfectly in contact with quicksilver, that the particles are rapidly and completely absorbed.

Mill men are invited to examine these pans and settlers for themselves, at the **PACIFIC FOUNDRY,**

1v10 San Francisco.

THE HAMMER QUARTZ MILL.

[PATENT APPLIED FOR.]

This Machine is now complete and ready for sale. In constructing it, our aim has been to produce a light, cheap and economical Crusher—one adapted to mining on a small as well as on a large scale.

The elementary principle on which it operates is that of the stamp—the only one really reliable and economical.

But the stamp has many serious disadvantages, among which are its great weight and small velocity; the great power required to run it; difficulty in feeding properly; imperfect discharge, and the necessity of crushing wet, or the annoyance from dust in crushing dry.

All these difficulties are obviated in our machine, and the percussive blow of the stamp retained, with the further advantage of its being a drawing or grinding one.

We give to our hammers such absolute or relative weight and velocity as we choose—just such as to effect their purpose and no more—thus securing the qualities of the natural hammer blow.

The feed is self-adjusting and uniform, and as fast as the ore reaches the required degree of fineness (which depends upon the fineness of the screen or sieve used), it is instantly discharged, so that there is no packing of the ore under the hammers.

The mill crushes dry, with no more dust than that incident to feeding, which is trifling.

As the only support of the mortar is a single post set into the ground, the machine can be put in place at slight expense.

The size now being built weighs about 1,800 pounds complete; the heaviest piece not weighing over 275 pounds. It is driven by half a horse-power, and crushes from three to ten tons per day of twenty-four hours per day, according to the character of the rock and the fineness to which it is reduced.

PRICE,.....$800.

Larger ones will be furnished if desired.

We invite an inspection of the Mill now in operation adjoining the Foundry of DEVOE, DINSMORE & CO., on Fremont street, between Market and Mission, San Francisco.

Office, No. 11 Court Block, San Francisco, Cal.

21v10 **RIX & LOGAN.**

ATWOOD'S Self-Regulating Windmill.

This Windmill is the most perfect self-regulator yet invented, and is capable of being adjusted to any desired speed. Manufactured at

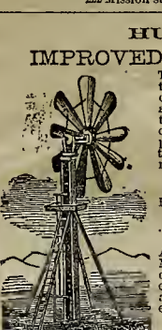
222 Mission Street, North side, below Beale,

SAN FRANCISCO.

N. B.—We also manufacture DICKERSON'S SELF-REGULATING MILLS; also, Rotary and Stationary Mills of different styles and prices, varying from $50 to $500 each; also round and square Water Tanks made to order.

222 Mission street, below Beale. 5

HUNT'S IMPROVED WIND-MILL.



THIS WIND-MILL IS RAPIDLY taking the place of all other Mills on the Pacific Coast. These Mills are so simple in their construction, that when once built, they can be put in order by almost any person; and when once in order they will run for years without repairs.

Prices, from $50 to $1,000.

ROUND AND SQUARE WATER TANKS BUILT TO ORDER.

HUNT'S PUMPS

Are admitted to be the best in the Market for Wind Mills, being built expressly for that purpose. They can be set, and taken apart with a common wrench, and are very easily repaired.

HUNT'S ENDLESS CHAIN

HORSE POWER

For Sawing Wood.

ALSO, THE

Self-Regulating Horse Power

Is so arranged as to give a steady motion, and is calculated to be used for turning Wood, Iron or Brass, also for Scroll or Circular Sawing, and is fully equal to Steam for any light work. The above Machines are built of the best materials, and made as Durable as Wood and Iron will make them.

ALL WORK WARRANTED.

☞ For further Particulars see small circulars. ☜

E. O. HUNT,

No. 28 Second Street, and 108 & 112 Jessie Street, San Francisco. 26-3m

HUNT'S PATENT Circular Sweep Horse-Powers,

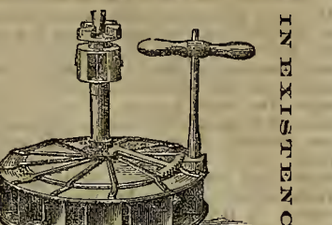
For running Churns, Washing Machines, Grindstones, pumping water, sawing wood, and other light machinery. Price, $100, at the Factory.

HUNT'S PATENT SELF-REGULATING TREAD HORSE-POWER is superior to any machine of the kind in the market. Price, with Governor, all complete to set to work, at the Factory, $300. Manufactured by

E. O. HUNT,

4v10 128 Second street, San Francisco.

Equal to the Best Overshot Wheel IN EXISTENCE.



LEFFEL'S AMERICAN DOUBLE TURBINE.

The DOUBLE TURBINES, so long expected, have arrived at last, and orders can now be filled. We have a large supply of the different sizes, from 40 inches to 20½. That we may know the proper sized Wheel you require, measure your water in the following way: Take the width of the stream, the average depth, and the distance it flows in a minute.

All the Wheels already in use give universal satisfaction. For particulars send for a Circular.

The above Wheel will be exhibited during the Fair of the Mechanics' Institute, where all may see it and hear its merits explained. This Wheel is especially adapted to mining purposes. It is light, and can be easily packed into the mountains. Wheels weighing from 400 to 600 pounds will yield from 10 to 400 horse-power under a head of 25 or 30 feet. They are the cheapest wheel to set up known, as they are so arranged as to produce the greatest power possible from the water used.

Come and see them, or send for a Circular to

LEFFEL & MYERS,

4v11-tf Care RICHARDS & MCCRACKEN, San Francisco.

TO QUARTZ MINERS.

Hinkle's Centrifugal Pulverizer and Amalgamator!

THE ATTENTION OF MINERS IS RESPECTFULLY requested to HINKLE'S CENTRIFUGAL PULVERIZER AND AMALGAMATOR, now manufactured and to be seen in operation at the NOVELTY IRON WORKS of Mr. E. T. Steen, Nos. 37 & 39 Fremont street, between Market and Mission streets.

This machine is the best in the State for the purpose of Pulverizing and Amalgamating ORES. The whole machine, made entirely of Iron, will not exceed One Ton, and no piece of it will exceed 200 pounds, which makes it very convenient for transportation to remote districts. It will work Two Tons of Rock per day.

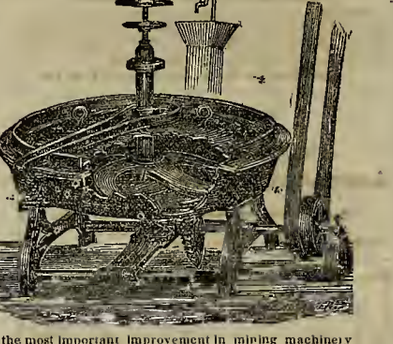
Mr. Hanson, who is running one of the machines, is an experienced Amalgamator, and will receive Ores at the above named place, and extract the metals and furnish assays for all persons wishing the same. The Subscriber manufactures a HAND MACHINE for Miners engaged in prospecting, which will work 50 pounds of ROCK at a time, and which will weigh about 175 pounds.

The Pulverizer and Amalgamator works Rock of the size of a grain of corn to an impalpable powder. Apply to

PHILIP HINKLE,

At the Novelty Iron Works, Nos. 37 & 39 Fremont street. 15-1m

BAUX & GUIOD'S Separator & Amalgamator



Is the most important improvement in mining machinery ever introduced. It was awarded the FIRST PREMIUM at the San Francisco Mechanics' Fair for 1864, where it proved itself to be the best Separator and Amalgamator among all the competitors. Constructed on principles which combine SCIENTIFIC KNOWLEDGE WITH PRACTICAL EXPERIENCE, these Pans extract more gold and silver from their ores than any others in use, as a few hours trial will demonstrate. Mill men will find it to their advantage to employ these pans as Separators, in addition to the ordinary Amalgators now in use, and to re-work their old tailings.

The cost of these pans is inconsiderable, and their structure is such that they can be readily separated in parts convenient for packing on mules. Among the many advantages possessed by BAUX & GUIOD'S Pan, are the following: The trifling cost for attendance; Its small cost; Its portability; The large quantity of pulp it can operate upon in a given time; It may be worked even weeks without stopping, as it is constructed to work continuously; The complete thoroughness of the separation of the rock from the metals and the milling power required to work them; They can be attached to any ordinary crushing apparatus.

Lapidaries' refuse, Refiners' ashes, Jewelers' sweepings, purchased or worked for a percentage. Ores and tailings worked or assayed at reasonable rates.

Manufactured at the Vulcan Iron Works, Miners' Foundry and San Francisco Foundry, San Francisco, and at Heugh & Thom's Foundry, Nevada City.

For further particulars, or to see this Pan in operation, call on or address

J. B. BAUX,

Fremont Street, near Mission, adjoining the San Francisco Iron Works, San Francisco. 4v8

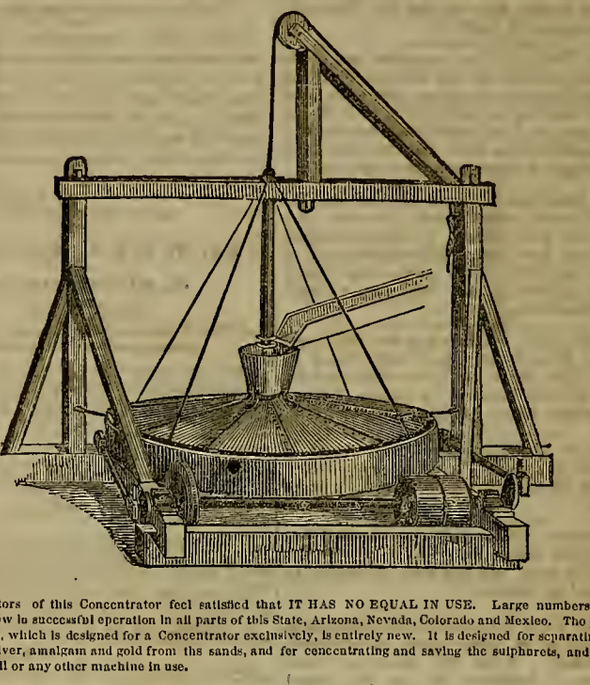
GOLD AND SILVER ORES.

UNDENIABLE FACTS FOR THE MINING PUBLIC.

At the Exhibition in the Fall of 1864, the Mechanics' Institute awarded a Premium to

E B. PRATER,

FOR THE BEST CONCENTRATOR.



The proprietors of this Concentrator feel satisfied that IT HAS NO EQUAL IN USE. Large numbers of these Machines are now in successful operation in all parts of this State, Arizona, Nevada, Colorado and Mexico. The principle of this machine, which is designed for a Concentrator exclusively, is entirely new. It is designed for separating finely divided quicksilver, amalgam and gold from the sands, and for concentrating and saving the sulphurets, and is to be placed behind all or any other machine in use.

One of these Concentrators can be seen in operation at Messrs. Kimbis & Murphy's Metallurgical Works, Bryant street, between Third and Fourth, San Francisco.

Circulars sent free, giving description and reference as to working, etc., on application to

Steamers now run about once a day to Europe, on an avarage, and yet of these forty and more there is not one belonging to an American company. The Collin's line (American) lost three steamers, while the Cunard line never lost any. American enterprise ought to remedy this unnational conditiou of affairs.

An old grave was recently opened at the Isle of Shoals, off the coast of New Hampshire, and from the contents of a bottle in which was a strip of parchment; it was found to contain the body of one of the attendants of John Smith, who was the first discoverer of the region, in 1603.

The Portland *Press* says that one of the physicians of that city had amputated the leg of a girl fourteen years of age, where the lower portion including the ankle joint, with all the fleshy parts, even to the skin, had been changed or transformed to n solid rock-like substance, and enlarged to three times its natural size.

Two Chinamen, who have been at work on Perkin's ranch, near Oakland, for some years past, have just returned to China, carrying with them some eighty different varieties of garden vegetable seeds, which they intend planting in Celestial soil. Who says "John" is not progressing.

Failed Again.—The jury in the Ophir and Burning Moscow case has again failed to agree. They stood six for the Ophir and six for the Burning Moscow. A change of venue to Esmeralda county has been granted.

A flash of lightning entered a store in Rockville, Conn., and lit an oil lamp, which remained burning, leaving no other mark of its course.

A starving laboror in Vienna lately killed his two little daughters in his frenzy at their prayers for bread, and has been sentenced to be hanged for the deed.

Henry Ward Beecher's congregation have contracted for an organ worth twenty thousand dollars. What will those poor little heathens of Timbuctoo do for red flannel shirts?

OIL WELL BORING.

J. SEVENOAKS,

Contractor

For Well Boring and Erecting all kinds of Machinery connected therewith.

Having had extensive experience in boring for oil in Pennsylvania, Canada and elsewhere, I feel confident of being able to give entire satisfaction. Persons desirous of making contracts as above, or wishing information with regard to oil indications, etc., will please address me at the office of the "Mining and Scientific Press," San Francisco, or to my personal address, Santa Cruz, Cal. 2v11

"Say, why should man for thirst he given
If not for wine bestowed by Heaven
To quench such drought as mine?
Without it, I'm a fish on land,
A barren heap of parching sand—
Then give me joyous wine."—*Trinklied.*

Delicacy of flavor, exhilaration without intoxication, and every other desirable property belonging to the rightly fermented Juice of the Grape, are to be found in the "Gerke Wine," from the celebrated Bosquejo Vineyard, Tehama county.

There is no wine produced in California that can bear comparison with this, and it would be difficult to find a European wine, of the same class, that can surpass it.

The vintage of 1862 is now offered for sale, in quantities to suit, by the Agent of the vineyard,

A. S. LOWNDES,

Basement of the New York Hotel, southwest corner Battery and Commercial streets, San Francisco. 20v10-ly

By order of the Board of Trustees.

N. C. FASSETT, Secretary.

Office, 402 Front street (up stairs), San Francisco. jy22

Wisconsin Gold and Silver Mining Company, Silver Mountain District, Alpine county, California

ASSESSMENT No. 4.

Notice is hereby given, that at a meeting of the Board of Trustees of said company, held on the 12th day of July, 1865, an assessment of one ($1) dollar per share was levied upon the capital stock of said company, payable immediately, in United States gold and silver coin, to the Secretary, at the office of the company, or to R. H. FORD, at Silver Mountain.

Any stock upon which said assessment shall remain unpaid on Saturday, the 19th day of August, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 2d day of September, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

J. WARREN CLARK, Secretary.

Office, No. 410 Montgomery street, San Francisco.

NOTICE.—At the above meeting, assessment No. 1, of 8 cents, levied July 8th, 1863, assessment No. 2, of 10 cents, levied September 19th, 1865, and assessment No. 3, of 50 cents per share, levied June 3d, 1851, were rescinded, and stockholders having paid the same, or any portion, will be credited on above assessment, No. 4 accordingly.

Constitution and By-Laws
—OF—
Mining and Prospecting Companies

Elegantly printed, with care and dispatch, at the office of the **Mining and Scientific Press.**

☞ Orders from the interior faithfully attended to. Packages which can be judiciously sent by mail will be prepaid our expense.

U. S. 7-30 LOAN.

By authority of the Secretary of the Treasury, the undersigned has assumed the General Subscription Agency for the sale of United States Treasury Notes, bearing seven and three-tenths per cent. interest per annum, known as the

SEVEN-THIRTY LOAN.

These Notes are issued under date June 15th, 1865, and are payable three years from that time in currency, or are convertible, at the option of tha holder, into

U. S. 5-20 Six Per Cent.

GOLD BEARING BONDS.

These Bonds are now worth a premium of nine per cent. including gold interest from November, which makes the actual profit on the 7-30 loan, at current rates, including interest, about ten per cent. per annum, besides its EXEMPTION FROM STATE AND MUNICIPAL TAXATION, WHICH ANNS FROM ONE TO THREE PER CENT. MORE, according to the rate levied on other property. The interest is payable in currency, semi-annually, by coupons attached to each note, which may be cut off and sold to any bank or banker.

The interest amounts to

One cent per day on a $50 note,
Two cents per day on a $100 note,
Ten cents per day on a $500 note,
Twenty cents per day on a $1,000 nota,
One dollar per day on a $5,000 note.

Notes of all the denominations named will ba promptly furnished upon receipt of subscription. This is

The only Loan in Market

now offered by the Goverument, and it is confidently expected that its superior advantages will make it

THE GREAT POPULAR LOAN OF THE PEOPLE.

Less than $300,000,000 of the loan authorized by the last Congress is now on the markct.

This amount, at tha rate at which it is being absorbed, will all be subscribed for within four months, when the notes will undoubtedly command a premium, as has uniformly been the case on closing the subscriptions to other Loans.

In order that citizens of every town and section of the country may be afforded facilities for taking the Loan, the National Bank, State Banks, and Private Bankers throughout the country have generally agreed to receive subscriptions at par. Subscribers will select their own agents, in whom they have confidence, and who only are to be responsible for the delivery of the notes for which they receive orders.

JAY COOKE,
Subscription Agent, Philadelphia.

March 25, 1865. 17v1 -3m

ADDENDUM.

PER OVERLAND TELEGRAPH:

PHILADELPHIA, Mny 17, 1865

Second Series all sold. Commenced on Third Series. Two Hundred and Thirty Millions (230,000,000) precisely like other two Series, except dated 15th July, and Government reserves the right to pay six per cent. in Gold instead of 7-30 Currency. **JAY COOKE,**
Subscription Agent, Philadelpbia.

Metallurgy.

EUROPEAN
METALLURGICAL WORKS,
—AND—
Practical Mining School,

Bryant Street, Between Third and Fourth,

SAN FRANCISCO.

THE Proprietors are at all times prepared to work or test Ores sent to this establishment—either in large or small quantities—by such process as may be found best adapted to their chemical character, after a careful analysis has been made. Test lots of Ore adapted to the smelting process attended to. Sulphuret, pyritous, and the (so-called) "rebellious ores," are having especial attention paid to their successful treatment. Assaying in the humid and dry way. Also, refining by cupellation, done at moderate rates.

PRACTICAL MINING SCHOOL.

The proprietors—encouraged by numerous applications from gentlemen desirous of pursuing the study of practical metallurgy—have concluded to admit parties on reasonable terms. Having in their Mill all the necessary appliances for crushing, roasting, amalgamating, smelting, refining and assaying, as also a well extended Laboratory for the analysis of Ores and Minerals, a good opportunity is here offered to acquire a sound practical knowledge of the business.

HELMBOLD'S
FLUID EXTRACT BUCHU

For Non-Retention or Incontinence of Urine, Inflammation or Ulceration of the Bladder or Kidneys, Diseases of the Prostrate Gland, Gravel, Brick Dust Deposits, Dropsical Swellings, Orgauic Weakness, Debility, Female Complaints, Etc.

H

HELMBOLD'S

FLUID EXTRACT BUCHU

—AND—

Improved Rose Wash

Will radically exterminate from the system Diseases arising from Habits of Dissipation, *at little expense, little or no change of diet, no inconvenience or exposure*; completely superseding those *unpleasant and dangerous remedies, Copaiba and Mercury*, in curing these diseases.

E

USE HELMBOLD'S

FLUID EXTRACT BUCHU

In all Diseases of the Urinary Organs, whether existing in MALE OR FEMALE, *from whatever cause originating, and no matter of how long standing*. It is pleasant in its taste and odor. IMMEDIATE in action, and more strengthening than any of the preparations of *Bark or Iron*.

Those suffering from *Broken Down or Delicate Constitutions, procure the Remedy at once.*

The reader must be aware that however slight may be the attack of the above diseases, it is certain to affect his *Bodily Health, Mental Powers and Happiness*. If no treatment is submitted to, Consumption or Insanity may ensue.

All the above diseases require the aid of a diuretic.

Hembold's Extract Buchu

IS THE GREAT DIURETIC.

L

HELMBOLD'S

HIGHLY CONCENTRATED

Compound Fluid Extract Sarsaparilla,

For purifying the Blood, removing all diseases arising from excess and imprudence in life, chronic constitutional diseases arising from an impure state of the blood, and the only reliable and effectual known remedy for the cure of Scrofula, Scald Head, Salt Rheum, Pains and Swelling of the Bones, Ulcerations of the Throat and Legs, Blotches, Pimples on the Face, Tetter, Erysipelas, and all scaly eruptions of the skin, and beautifying the COMPLEXION.

M

NOT A FEW

Of the worst disorders that afflict mankind arise from the corruption that accumulates in the Blood. Of all the discoveries that have been made to purge it out, none can equal in effect HELMBOLD'S CONCENTRATED EXTRACT OF SARSAPARILLA. It cleanses and renovates the Blood, instills the vigor of health into the system, and purges out the humors which make disease. It stimulates the healthy functions of the body, and expels the disorders that grow and rankle in the Blood. Such a remedy, that could be relied on, has long been sought for, and now, for the first time, the public have one on which they can depend. Our space here does not admit of certificates to show its effects, but the trial of a single bottle will show to the sick that it has virtues surpassing anything they have ever taken.

B

Two tablespoonsful of the Extract of Sarsaparilla, added to a pint of water, is equal to the Lisbon Diet Drink, and one bottle is equal to a gallon of the Syrup of Sarsaparilla, or the decoction as usually made.

The above Extracts are prepared on purely scientific principles—in *Vacuo*—and embody the full strength of the ingredients entering into their composition. A ready and conclusive test will be a comparison of their properties with those set forth in the U. S. Dispensatory.

O

HOW TO USE THE REMEDIES.

In Diseases of the Blood, Humors on the Face, or any and every part of the body, use Extract of Sarsaparilla, applying to Pimples and all external Humors or Eruptions the Improved Rose Wash.

Use the Extract Buchu for all diseases requiring the aid of a diuretic, except those of the Urinary Organs, such as Gonorrhœa and Gleet; in these use the Extract Buchu, and inject with the Improved Rose Wash.

L

☞ THESE EXTRACTS HAVE BEEN ADMITTED TO USE IN THE UNITED STATES ARMY, and also are in very general use in all the STATE HOSPITALS AND PUBLIC INSTITUTIONS throughout the land, as well as in private practice, and are considered as invaluable remedies.

QUARTZ OPERATOR'S
HAND BOOK.

A Book for Every Intelligent Prospector, Shareholder, Miner and Machinist.

ZENAS WHEELER AND P. M. RANDALL,

Authors and Publishers.

BOUND IN CLOTH—144 PAGES, DUODECIMO.

THE QUARTZ OPERATOR'S HAND BOOK is presented to the public as a carefully prepared epitome of all that is valuable for the practical operator in the mine and mill. We have here all the most necessary hints and directions for testing and assaying the ores of the various minerals; an explanation of chemical terms; a brief and intelligible description of the numerous processes for roasting ores, and the extraction of metals from their ores by amalgamation and otherwise.

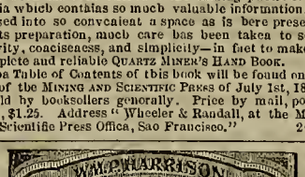
The work also contains an original and highly interesting discussion of the tractory and differently formed grinding plates, as applied to the reduction of ores—a subject not only of special interest to the scientific reader, but also practically of the highest importance to every quartz miner.

Professor Silliman, of Yale, and Hodgson, of the College of California, having examined this discussion, as submitted to them by its author, Mr. Randall, previous to the compilation of this work, speak of the same as not only mathematically correct, but also as of great practical value. Messrs W. R. Eckart, Jr., Engineer, (late of U. S. N.,) and W. M. Belshaw, assayer and superintendent of the S. T. M. Co., to whom the entire work was submitted while passing through the press, speak of the same as one of high practical importance to quartz miners and millmen generally.

No work has been offered to the mining public of California which contains so much valuable information, condensed into so convenient a space as is here presented. In its preparation, much care has been taken to secure brevity, conciseness, and simplicity—in fact to make it a complete and reliable QUARTZ MINER'S HAND BOOK.

The Table of Contents of this book will be found on page 415 of the MINING AND SCIENTIFIC PRESS of July 1st, 1865.

Sold by booksellers generally. Price by mail, postage paid, $1.25. Address "Wheeler & Randall, at the Mining and Scientific Press Office, San Francisco." 2v11



NEW DISCOVERY

FOR DESULPHURIZINO AND DECOMPOSINO

METALLIFEROUS ORES,

—SUCH AS—

Auriferous Sulphurets, Arsenites or Antimonial Telluric, Gold and Silver Ores.

By this new process, in a short space of time these ores are decomposed or disintegrated so that they may be easily ground in a common coffee or other hand-mill. A patent has been applied for. The right of using is now for sale by EDWARD ARNOLD, Monitor, Alpina county, Cal., or by

DANIEL ROSS,

Traveling Agent for the sale of the above mentioned discovery throughout the United States. All rights sold by him will be recognized by me.

Brandreth's Vegetable Pills.—This medicine, of enduring efficacy, is justly prized as a corrector of all disorders of the stomach and bowels, the common symptoms of which are costiveness, spasms, loss of appetite, sick headache, giddiness, sense of bloating after meals, dizziness of the eyes, drowsiness, and cramping in the stomach and and bowels. These symptoms being suffered to remain, a torpid state of the liver supervenes, and all the horrors of dyspepsia are experienced. Every function of the frame is to a certain extent prostrated; but a little perseverance in the use of BRANDRETH'S PILLS will ever restore the system from this state of misery. Two or three doses will convince the afflicted of their salutary influence. The stomach will speedily regain its strength, a healthy action of the liver will soon take place, and instead of listlessness, heat, pain, and jaundiced appearance, activity, strength and renewed health, will be the blessed result. Brandreth's Pills are sold at 25 cents per box, enveloped in full directions. Purchase none unless my private Government Stamp is on the box. See upon it "B. Brandreth" in white letters.

Mining and Scientific Press.

A Journal of Useful Arts, Science, and Mining and Mechanical Progress.

DEWEY & CO., PUBLISHERS And Patent Solicitors.

SAN FRANCISCO, SATURDAY, AUGUST 12, 1865.

VOLUME XI. Number 6.

During the Fair

We hope the readers of the MINING AND SCIENTIFIC PRESS will look with leniency upon any degression they may observe from the usual contents and make-up of our journal. Correspondents will also please bear patiently with the crowded state of our columns in giving full reports of the Exhibition.

OUR PAPER BY EXPRESS.—Owing to the fact of Wells Fargo & Co requiring publishers to pay 2½ cents per copy in advance on papers sent to subscribers in the interior we are obliged to make our subscription terms by express $3 50 per annum. Our recommendation to newspaper patrons is to patronize the U. S. mail in all cases practical, as it is the cheapest and most reliable conveyance.

SPECTRUM ANALYSIS.

Of all the contributions made to science during the last five years, none have been more important or interesting than those which have resulted from the discovery and application of the "spectrum (or proto-chemical) analysis." Our attention has been more particularly called to this subject, at this time, from having recently for the first time seen and examined a "spectrum,"—the instrument by which this mode of analysis is accomplished—which has recently been received, in connection with an extensive assortment of other optical instruments, by the St. Ignatius College of this city. So far as we are aware, this is the only instrument of the kind on this coast; and after listening to a brief explanation of the process of manipulation involved in the use of the same from Prof. Chichi, of the above named institution, we were curious to learn more fully of its history and advantages. In seeking such information, we naturally dropped in at Bancroft & Co.'s, on Montgomery street, and in looking over their scientific department of books, we came across just what we desired, a work entitled "Researches on the Solar Spectrum, and the Spectra of the Chemical Elements: by G. Kirchhoff, Professor of Physics in the University of Heildelberg," translated by Henry E. Roscoe, of Owen's College, Manchester, England.

It is to Professors Kirchhoff and Bunsen that the world chiefly owes the foundation of an entirely new and interesting branch of chemical science—the application of spectrum observations to qualitative analysis; and the various scientific researches and important mechanical advantages which have been or may be derived therefrom. The work to which we refer contains a full description of the methods of experiment employed by Prof. Kirchhoff in his investigations, accompanied by engravings fully illustrative of the same. In the present article we have merely space to briefly allude to the additions to knowledge which have been made through these investigations.

It is well known that when a ray of sunlight is caused to pass through a prism and made to fall upon a wall or screen, a succession of colored lights is produced, known as the solar spectrum. It has also long been known that in carefully examining these lights or colors, numerous dark lines may be seen, having no apparent reference to the colors or the medium by which they are separated. It has only quite recently, however, been observed that the position, brilliancy and particular tint of these lines vary with the character of the light yielding the spectrum—the sun giving one class of lines, a candle another, and gas light a third, and so on, each artificial light, as well as the light of the sun, having its own peculiar and invariable system of lines. These phenomena were well known and commented on by the scientific world for nearly fifty years, without any satisfactory explanation of their philosophy being given. The lines had even been mapped out, colored and counted, to the extent of 2,000 in number.

It was at this point that the investigations of the eminent professor Kirchhoff, and his associate Bunsen, commenced. They observed that when different metallic substances were burned, or rather *evaporated* in gas flames, and the light of those flames passed through a prism to form a spectrum, these bright lines were varied by each different metal, and that the lines developed by any given metal were always uniform.

Just there was the discovery, which at once accounted for the phenomena of the "lines," and opened up to their delighted imagination a new and most important portal through which science might still further penetrate the *arcana* of nature. It required but a small additional amount of investigation, and some improvement in their apparatus, to prove to an almost mathematical demonstration that we can tell the character of the combustion which is going on in the sun, as well as that in the ordinary gas flame which lights our dwelling. It also confirms the idea that the further we penetrate into the secrets of nature, the more we find there remains to be learned.

It is difficult, without an illustration, to give the reader who has never seen an instrument employed for a spectrum analysis, any intelligible idea of the process. In the absence of any illustration we can merely say, that an ordinary gas lamp is placed upon a table, and a prism so arranged that the light from the lamp may be made to pass through it and fall upon a proper surface; the spectrum so formed is then examined with an eye-glass of suitable magnifying power, and the character of the lines developed thereon compared with a standard scale properly colored and noted. If any metal is burning in that flame, by finding the lines on the scale which correspond in color, intensity and relative position to those on the spectrum developed by the light employed, the character of that light may be read at once, and the metal which may be burning determined. The metal may be introduced into the flame in the form of a chloride, or in any other form in which it may be evaporated, or burned in the flame employed; it may be held, for convenience, on a piece of platinum wire. If a mineral is to be examined, it should be pulverized and digested in a proper acid, to dissolve the metal which it may contain, and a portion of the liquid evaporated by dipping therein a piece of platinum wire and transfering the same to the flame. When necessary an electric current may be employed to effect the fusion.

Of course nothing but a qualitative analysis can be obtained by this process; but experiments have fully proven that the peculiar lines developed by these spectrums may be regarded as absolute proof of the presence, in the flames, of certain metals corresponding to the lines. The spectrum analysis serves, therefore, as a re-agent, by means of which the presence of metals may be recognized with more certainty, greater celerity, and in far smaller quantities than can be determined by any other known method employed in chemistry or metallurgy.

As an evidence of the extreme minuteness in quantity of any metal which may be detected by the spectrum, it is stated, on the authority of both Bunsen and Kirchhoff, that they have obtained a bright and distinct sodium line by burning only forty-six one-thousandth (0.046 gr.) part of a grain of chloride of sodium (common table salt). As our article has already become quite lengthy we propose to continue it in a future number, in which we shall endeavor to detail some of the most important scientific and mechanical advantages which have already been derived from this wonderful discovery.

ELECTRICAL SCIENCE.—Among the many ingenious inventions which have been called into being by the necessities required in manufacturing and laying the Atlantic cable, none perhaps is more simple, beautiful and perfect, than the arrangement devised by Professor Thompson, the scientist of the telegraph company, for measuring the rate of leakage of the electric fluid from the charged cable. This is accomplished by what is known as a torsion balance, an instrument for estimating very minute forces by the motion of an index attached to the ends of two very fine wires on threads which twist around each other. The index in this case is a very minute steel needle, the slightest motion of which is exaggerated *ad libitum*, by the simple device of attaching to the needle a mirror, which reflects the light of the lamp on a scale placed at a distance, showing a little line of light, which traverses many inches, while the index needle makes a movement scarcely appreciable to the naked eye. The most trifling leakage, for hundreds of miles of cable, may be thus detected, and almost the precise point of escape indicated by the operator. So exquisitely delicate is this test, that while the cable was being manufactured a minute flaw in one of the four coatings of gutta-percha was detected, and its locality, within a few yards pointed out, so that the length within which it occurred was cut out. So intricate and multiform have the devices of the artisan become, in these modern times, that it is now almost a *sine qua non* that science should go hand in hand with art in nearly all our daily avocations.

THE REESE RIVER PEARL G. & S. M. Co. is the name of a New York organization recently formed to work several very valuable mines in the immediate vicinity of Austin, Reese River. The mines belonging to this company are known as the Pearl, the Russ and the Amelia. The first named of these mines was visited and carefully examined by Professor Silliman while that gentleman was in Reese River, last summer. He speaks of it as a very promising and valuable mine. The Trustees of this incorporation, with the exception of Mr. George Turin, the resident superintendent, are all well known merchants and brokers of New York city.

WE have received a long and interesting letter from Mr. H. Harding, of Visalia, giving much valuable information concerning the mines of Tulare county, which will appear as soon as we can afford it space.

A NEW ASTRONOMICAL THEORY.—A new English astronomer, Mr. R. Proctor, of St. John's College, Cambridge, who has just published an elaborate book on the planet Saturn, believes Saturn's rings not to be continuous bodies, either solid or fluid, but a multitude of loose planets, grouped like a bead necklace round his equatorial regions, just as if we were furnished not with one moon, but as many moons as would span the whole earth. Mr. Proctor asserts that this hypothesis explains more completely the whole phenomena of the case than any other. This supposition somehow gives a larger idea of the opulence of the universe in worlds than any other known fact. To have such a multitude of little worlds strung close together round one planet produces (illogically enough) a more vivid impression on the mind than many times the number of fixed stars distributed over the infinitude of space. *London Spectator.*

The idea of a planetary ring, surrounding a large body in space, is not new with Mr. Proctor, as intimated in the above extract from the London *Spectator*. The idea was first suggested by Sir John Herschel, in an article in the *London Quarterly Journal of Science*, in which he threw out the suggestion whether the original exciting cause of the spots on the sun might not be due to the circulation around that luminary of an eliptic ring of planetary matter in a state of division so minute as to elude telescopic vision — precisely the same idea as that suggested by Mr. Proctor, to account for the rings of Saturn.

A NEW FLY TRAP.—Mr. Horace Collier has shown us a novel and ingenious Fly Trap of his invention, which appears to be constructed more on reason and the known habits of the American house fly, than anything else of the kind we have ever seen. It is well known that a fly, after gorging himself, will always endeavor to ascend; he will go up to the top of the room, etc. Acting upon this hint, Mr. Collier has constructed a trap after the following manner: He makes a wire enclosure, much in the shape of an ordinary bird cage of fine woven wire. The bottom of this cage is made of tin, closely perforated with holes, just large enough to allow a fly to pass through from the smooth side upward. The roughness and protruding edges of the holes renders it impossible for him to return, even if he attempts to do so, which he seldom does. Beneath this bottom, about two inches, is suspended another false bottom, not perforated, and upon which is placed the bait—a little moist sugar, or any other suitable substance. Eight or ten short pieces of wicking, saturated in sweets, are drawn through as many holes in the perforated bottom and reaching down to the false bottom. The flies appear disposed, after eating awhile, to climb up these enticing ladders and pass from them through the openings, securely into the trap above; having entered which they are safe from any further mischief, and may be readily smoked to death, smothered by sulphur fumes, or disposed of in any other convenient manner. These traps may be seen at the book and stationery store of Messrs. Martinet & Schiley, 633 Market street.

OIL BORING IN HUMBOLDT.—The Humboldt *Times* says that there are probably twenty-five wells being bored for petroleum, at this time in Humboldt county.

OPENING ADDRESS

Of the Mechanics' Institute Industrial Exhibition, delivered at Platt's Hall, Wednesday Evening, August 9th, 1865.

BY HON. FRANK M. PIXLEY.

FROM THE DAILY AMERICAN FLAG, AUG. 10TH.

Thomas Carlyle, a distinguished English writer, has asked, with the illiberality which characterizes some Englishmen, "What great human soul? what great thought? what great noble thing, that one could worship or loyally admire, has yet been produced in America?"

May we not answer him this: We have elevated labor and made it honorable; we have established a commonwealth on a broad and durable base, recognizing the dignity of labor; we have builded a government for the people, laying its foundations deep and broad in the recognition of the great truth, "that all men are equal," and we have carried up the superstructure, preserving, in all its grand proportions, the symetrical beauty of the idea, that not birth, but merit, intelligence and virtue are the essentials of true greatness.

May we not answer this English writer that we have provided the means of education for all our youth; that we give all the honors and offices of our nation to those who strive for them; that we give the right of the elective franchise to all of our race, making every one a sovereign; clothing him with all the power, dignity and responsibility of a citizen.

If to-night I was reading an address to the mechanics of England, to what proportion could I direct my reflections upon political questions? How many of them might consider themselves interested in the discussion of great topics of national importance, which are so appropriate for you to understand?

How many of them would have any other interest than in the question of beef and beer? In the Kingdom of Great Britain there are five millions of white men of lawful age deprived of the right of the elective franchise, who can take no part and have no voice in the administration of the Government under which they live. In Ireland only one in eighty have a right to vote.

When we are asked, what great human soul we have produced? may we not point with pride to the birth, and life, and death of him, who led our armies of working men through the war of our Rebellion against England to victory. Who became the first of the great Republic which his sword had carved out; who ripe in years and full of honors claimed as his only reward for a life of patriotism the indulgence to retire from the service of his country. May we not claim a great human soul in George Washington, the Father of the Republic?

When asked what great thought have we developed? Have we not demonstrated the sublime idea that men are capable of self-government; and looking back through all the bright pages of English story, back through all their centuries of time, back to the twilight of their early civilization, do we find any great thought comparable to this?

When asked what great noble thing that one could worship or loyally admire, has yet been produced in America? May we not answer, we have produced the grandest commonwealth of freemen that the world has ever seen?

We have established a Government by the sacrifice of our sires, preserved by the blood of their sons for the refuge of the oppressed of all the world.

We have carried out a system of laws which afford protection alike to all.

We have laid firm and broad and deep the foundations of our Temple of Liberty in the education and intelligence of our masses.

We have builded up an altar to the worship of the ever living God, before which all creeds and forms and faiths may kneel in fearless freedom.

Discarding all privilege to class, all title to nobility, all preference to the eldest born, we have placed our soil, our social honors, and political ambitions within the reach of all.

And more than all this we have dignified labor and given to it the letters patent of true nobility.

May we not claim something more in the lessons taught by the stern and terrible trial through which our people have passed in the four years of war that has desolated our beautiful land?

England has produced her heroes on land and sea. Collingwood and Nelson have proudly fought their fleets to victory. Marlborough and Wellington waded through fields of blood to glory, but in all their galaxy of heroes, have they any brighter constellation of glorious names than Porter, Farragut, Sheridan, Sherman and Ulysses Grant? [Great applause.]

We may not be ashamed to compare with their grandest naval victories of the Nile and Trafalgar our exploits at New Orleans and Port Royal; their sternest fights, their grandest armies, their Agincourt and Waterloo, with the terrible encounters of our gallant boys in blue, our noble array of strong-armed men, whose many battle fields bewilder us in the recital of their names. [Applause.]

Has not this war demonstrated the strength of republican governments; that the ideas and theories of a free commonwealth can be protected on the battle field by the freemen who compose it; that it is not only strong in peace, and prosperous when under the sunshine of repose, but strong in war, and terrible when assailed, or its existence menaced by civil war?

The sublimest lesson taught in this conflict, and the one which most strikingly illustrates the ability of our people for self-government, was in the moderation and calmness with which was received the last, saddest and most terrible blow in this sad and terrible drama—the assassination of our Chief Magistrate, our loved and honored President; he who had so safely piloted us through this dark and fearful night of civil war; our noble Chieftain, whose great loving heart was capacious enough to have embraced all within its kindly sympathy. He was foully murdered, and yet the people obeyed the law; order, not chaos followed; sorrow, not anger ruled the Nation's heart; judgment, not revenge controlled the people's acts; and then was seen the grand and simple operation of our constitutional Government. "The President is dead, long live the President." One lay dead in his bloody vestments, the other placing his hand upon the word of God, with simple oath becomes Commander in Chief of the grandest army of the world; first magistrate of thirty millions of people. Have we not, indeed, made labor honorable, and given to it a just recognition, when the poor farmer's boy, the village attorney, the President of the United States dies, and is followed in his high office by a self-educated mechanic? There is great fitness in the fact of a mechanic being President of the Republic at this time. The war through which we have passed has shown that we live in an age of mechanics. We may not call ours the age of bronze or iron or gold, we may rather name it from the artificers in metal than from any of the metals themselves. In no other era of the world's history has mechanical art been brought to so much perfection, and no event could have illustrated the advancement of the mechanical sciences as has the giant struggle in which we have so recently engaged.

Let us for one moment consider the fearful engínery of war as compared with olden time. When a castle's walls of solid masonry was guarded by ditch and moat and drawbridge, impregnable to the attack of battering ram or taggot, its ramparts armed with stout men at arms, a seige was but a question of vigilance against surprise, water and food for long investiture. The lance, the bow, the bill and sling of the olden time wore innocent implements of war; after the invention of gunpowder the blundering arquebusse, the unweildly culverin were but little effectual in the art of death. Knights and horses armed in coat of mail and plate of glittering steel went forth with sword and lance to deeds of single combat; then the strong arm, the cool courage and the stout heart told in acts of personal valor. How different a field of battle now, with its cunning strategy, its terrible implements of death, its fearful machinery of war? No coat of linked-mail to guard the manly breast, no stout shield of brass or hide to cover the warrior's front, no trick of the wrist or art of defense may shun the deadly bullet from the unerring rifle; no personal valor or prudence may guard against the crushing cannon ball that ploughs its furrow of death through unresisting ranks. Now the mad maelstroom of battle is the swift clashing of material force, to be determined by the quality and effectiveness of the implements of destruction. Victory rest with the Minie rifle against the flint musket; with revolving barrels and repeating shot, against the single bullet; with the grooved chamber, against the smooth bore, the unfailing percussion cap, the self-adjusting cock, the breach loading gun, against the older and less successful experiments in arms. In the heavy ordnance war becomes but a contest in mechanics. Bursting shell, with their nice adjustment of fuse, the elevation scientifically calculated for distance, and taken by telescopic observation. Red-hot shell from heated ovens, loaded to the cannon's mouth with the levor and the inclined plane. The light artillery, on its mission of death flies across the ensanguined field, a failure if a linch-pin fails. Rifle cannon so nicely poised, so exactly adjusted, as to elevate or depress at the finger's touch upon the screw, and then hurling their three hundred pounds of solid steel against ship or fort or bastion. Ships, iron-plated, clad in chains and armor, with revolving turrets, hurling their fire against the enemy and guarding from assault, those within their protecting shields.

I fancy that even Thomas Carlysle would have admitted that if this last invention of the American mechanic was not a noble thing for him to worship or loyally admire, he would at least have looked upon it with some degree of respect; and when he thought of the boasted wooden walls of England, be might have trembled for them in prospect of any warlike encounter with the American Monitor. This war too has demonstrated that all the Americans are a mechanical as well as a warlike people.

It was a popular idea that all the inventive faculty lay within the limits of New England, and all the manufacturing genius belonged to the Northern States; that our Southern brethren possessed the accomplishment and gallantry of the cavalier, but none of the genius to create or discover. But, under the stern necessity of their position we find all kinds of war material and all the necessary requirements to maintain their armies and supply their people springing up under their hands; their foundries, powdor mills and ship-yards, turned out gunboats of formidable character, and though now in the day of peace, we may hope to see this people return to the arts of agriculture, the lesson may not be without importance in teaching them the capacity of their people and the resources of their land.

It has ever seemed to me, that the truest measure of a nation's prosperity and greatness was the character of her mechanics, simply because a nation whose mechanics excel in all the departments of their various pursuits, is independent and self-reliant. The mechanical art gives permanence to every other branch of industry.

Of the European Governments of modern times, England has attained the highest point in civilization, in moral and material progress. Her mechanics build the fleets which bear the products of her looms and forges, the handicraft of her skillful workmen to all parts of the world bringing in return the raw material which goes forth in exchange for everything which can enrich and exalt her realm. Thus, from her little island in the sea, has she carried her conquest, her commerce, her arts, her literature and her laws to all parts of the world.

Let us now consider some of the practical questions which touch the material interests of our coast and people. Adam Smith has put forth the axiom, "that labor is wealth." Labor is the source of wealth; every laborer who comes here bringing his muscle, his industry and his skill, brings capital to be added to the wealth of the State. This labor should find employment tor every man willing to work, if left unemployed, to that extent paralyzes and retards the advancement of the State. Our continued effort should be to encourage the immigration of working men and women, and check by every possible means in our power the importation of any article that we can ourselves produce. Every dollar that we send abroad for articles which could be produced or manufactured here, is a dollar worse than wasted.

This State can never be truly prosporous until we can manufacture for ourselves, and if one half the money which has been wasted in gambling ventures in search of the hidden treasure of our mines, had been expended in the legitimate business of manufacturing, we should have saved hundreds of millions of dollars to the aggregate wealth of the country.

Half the money which has been ventured in search of silver in Washoe; that has been wasted in bribes to prevent justice, in fees for the subornation of jurors and witnesses; that has gone to swindling corporations, to profligate mining secretaries and criminal treasurers; that has been paid for huncombe science and pretended experts, would have made every water course in our State vocal with the music of the clacking wheel as in merry industry it toiled—would have builded shops and factories in every county, giving employment to labor and wealth to the country.

Halt the money risked and lost by our people in their wild excitement for new diggings from the time of Gold Bluff to the last expedition in search of lost treasure on Cocos Island, would have given us railroads through every valley of our State.

Half the money risked and lost by our merchants in desperate commercial ventures would have builded ships to convey our commerce to every sea.

I speak now of gambling and speculative projects, not intending to discourage those legitimate enterprises which are calculated to develop the mineral resources of our State or open new avenues to wealth; for upon the prosperity of our mines in a great degree depends the prosperity of all other business; and it is a matter of congratulation, that while the gold products of our placers are diminishing, the skill of our mechanics is perfecting appliances which enable us to increase our gold products from our quartz and gravel mines. The report of the Patent Office discloses this fact: The inventions, improvements in mining processes, machinery which have been made in California, have grown out of our mining operations, are more numerous and perfect than all the previous inventions of similar character in the world; that during the last ten years, California has taken out more patents than any other State in the American Union, and especially in pumps, quartz machinery and chemical processes for extracting metals from ores, have our people been successful. We are discovering silver, coal, copper, quicksilver, borax, iron, marble, and other valuable minerals in such quantities and character of deposits as ensures the prosperity of mining interests for long years to come. And while we have not made as rapid advancement as would be desirable in manufacturing we have been by no means idle. I would have been glad to have gathered some statistical information touching these interests of our State, for I believe the figures would do us great credit, but the time afforded for this address was too limited for the attempt.

We are now manufacturing blankets and coarse woolen cloths, powder, paper, glass ware, shot, matches, brooms, tubs, pails, cabinet work, jewelry, soap, starch, maccaroni, bricks, marble, granite work, fire hose, carpets, and leather.

We are building ships, steamers, steam engines, boilers, railroad cars, carriages, wagons, producing machinery for quartz crushing, mill work and castings of every description and agricultural implements; our grains are floured in our own mills, or distilled; casks, barrels and lumber from our own forests; cider, and vinegar made from our own orchards; pickles and can fruit of our own raising; beet and pork packed for our own consumption; wine from our own vineyards. A cotton factory is in process of construction, which if successful, and shall encourage the cultivation of cotton upon the Pacific coast, will be worth to our State half a dozen silver mines. We are raising the cotton now; we are producing tobacco, and manufacturing large quantities of cigars; we are producing more whisky than is good for our people to drink; our wine product is in the millions of gallons already, though the vine culture is but in its infancy; we are packing onions and figs with success. There are doubtless many other sources of home wealth that I have overlooked, and I have named only a portion of our manufacturing and producing occupations; but even this glance will enable us to contrast the present with the time when we used to wonder if our mountain land would grow vegetables; when our onions and pototoes came from the Sandwich Islands, our soiled linen washed in China, our eggs and butter brought from Boston, our lumber from Australia, and our bricks from New York. This glance at our productions teaches us also how many other articles we ought to produce and manufacture, and which we will undoubtedly accomplish in the good time coming, when labor is plenty and money is cheap.

The question of currency is now claiming the attention of our people; let us briefly consider it. It is one of those questions in which we have all a common interest—we all desire the same result. We want cheap money and plenty of it. A thousand schemes of industry would be entered upon if money could be obtained at low rates of interest, and for want of which our State is now languishing. Gold and silver is our only circulating medium. Whether wisely or not, the Constitution of California prevented the establishment of banks for the issue of paper money, and for twelve years we operated with only gold and silver coin.

The war came, and the Government found it necessary to issue paper currency, and to declare that it should be Legal Tender for the payment of all debts. The people of the Eastern States had been in the use of paper money and they found the transition from the one kind of paper to the other easy. The substitution of the bills of National banks for the bills of private banks was not difficult. Nearly all the war expenditure was in the Eastern States and thus the people of those States become familiar with the National Currency. The substitution of paper money for coin was found more difficult. On this coast we were far removed from the scene of war and war money. Our capital was largely owned by foreigners, our home indebtedness had been created for gold, we were in danger of a financial crisis, the holders of capital began to draw in their money, to deny further accommodations unless they could have a guarantee that if they loaned gold they should be paid gold. If the merchant sold for a gold price and the mechanic manufactured for a gold value and the laborer worked for gold wages, these moral obligations should be legally enforced by payment in gold, and legislation wisely, I thought at the time, passed what is known as the Specific Contract Law, but which is simply an amendment to the Practice Act, providing that when contracts are made for the payment of gold, or silver, or paper, the courts shall enforce the obligation in the specific currency in which the contract is made. In other words, it extended the machinery of the law and the process of the courts to carry out the contracts which business men entered into with each other. The repeal of this law is now being agitated. It is hard to convince the working-man that a paper dollar at twenty-five cents below par, is equal in value to a gold dollar; but two paper dollars, worth seventy-five cents each, are worth just fifty cents more than the brightest gold dollar that ever left the mint. We need all the money we can get, still we must not confound cause with effect. It is said that the Specific Contract Law prevents paper money from coming to California—prevents the establishment of National Banks—that nearly a thousand millions of dollars of National Currency are floating in the Eastern States, seeking investment at low rates of interest, and that the repeal of the Specific Contract Law would encourage the introduction of that capital to our State, would aid to develop our resources, encourage our manufacturing interests, and build up internal improvements.

Now, we would all of us be glad to have more capital, and I do not believe there are any of us who are so prejudiced against paper money that we would not be glad to have our pockets full of it. We would be glad to see National Banks established in rivalry with our own banks for the reduction of rates of interest; we are all in favor of cheap money, and we are all patriotic enough to believe our Government is able and willing to pay her entire debt, gigantic though it be.

But is it not well to inquire whether the repeal of the Specific Contract Law will bring about all the improvement and benefit we desire; whether its repeal will ward off all the evils we deplore and all we anticipate?

It is a delicate matter to attempt to legislate upon questions of currency. Money is sensitive, timid, and easily disturbed; and unless we are very certain that the repeal of the Specific Contract clause will improve our financial condition and alleviate the monetary embarrassment, we had better leave the law undisturbed. Capital is the nursing mother of labor, and any legislation that disturbs the one destroys the other.

There is another question claiming public attention touching the interests of labor. I refer to the position of the Freedmen of the Nation.

Our war has happily terminated in the enfranchisement of four millions of people who were formerly slaves. Upon their labor depended the production of certain leading staples. They were the working force of a large section of our Union; whether this labor force shall be retained in the spot of their former employment, or shall invade the fields of industry now occupied by the white laborers of the North, involves the prosperity of both parts of our country.

Communications.

[Written for the Mining and Scientific Press.]

Mining at Reese River—The Mills about Austin, and their Management.

Messrs. Editors:—The mills in operation at present, are the Manhattan (late Oregon), Midas, California, Butte, Hildreth, and Buell's; all running on custom rock, with the exception of the Manhattan. The mills idle, are the Weire, Eagle, Union, Clilton, and the Pioneer. All of these have recently changed hands, and are now undergoing repairs and alterations, which will greatly increase their efficiency and capacity for the reduction of ores.

THE MILLS BUILDING

Are the Keystone, Confidence, an addition of twenty stamps and amalgamators in preparation to the present Manhattan mill, the Big Creek or Prescott mill, and another not yet named, the machinery of which arrived here last week, under the charge of Mr. Thurston, agent of New York capitalists. As my present letter is intended more to dwell on the mines and their management, I will defer a description of the mills to my next; but will say here, that it would dispel much of the mist from off the eyes of some of the "incredulous croakers" against the Reese River mines, were they here to witness the preparations and outlay that are being made to develop the mines of this place. When we find 16-stamp mills in active operation, five others increasing their capacity from ten to twenty stamps each, and five others building, of twenty to forty stamps each, all within one district, we must begin to think that there is something in the district that justifies this outlay.

THE LEDGES TURNING OUT PAY ORE

May be counted by hundreds; but the principal ones are in Upper Austin. Those of the Manhattan company, namely: the Oregon, North Star, and Southern Light; the Savage, North River, Diana, Morgan & Muacey, and Great Eastern; on Lander Hill, the Hooker, Scottish Chief, and Providential; at Yankee Blade, the Confidence, Whitlatch, Maggie, and the Midas. Now, as already stated, there are hundreds as good mines as these all over this district, and many that have proved themselves even better than those mentioned, but which are lying idle and undeveloped. Some of them are so because they have proved to be good, and of course they must be "spieed" with an application of Montgomery street, "shenanigan," or "freeze-out" game. The poor fellows who discovered them, and were fools enough to allow the controlling interest to pass from their hands, have no business to own rich mines! Oh, no, they must be got rid of. Mr. Secretary calls a meeting of trustees; they meet, the pleasing announcement of mine being rich is made. What is to be done? Pursue the usual course of San Francisco justice to the honest miner, of course, and levy an uncalled-for and exorbitant assessment. The Shylocks arrange with Mr. Secretary that their portion will be forthcoming(?) in due time. The poor miner's stock is seen in delinquent list; he hussels round to make the riffle, finds he can't "come to time," and is almost crazy at seeing such a sacrifice about being made, of what he stupidly considered was his "pile." He demands an explanation as to why such an enormous assessment should be levied, in view of the fact of plenty of rich ore being right in view, and the fact that several tons could be taken out daily, hauled to one of the many mills in the vicinity, and in quick time be converted into bullion. Mr. Secretary replies: "It has been ordered by the trustees." And here the matter ends, as the auctioneer's hammer drops for the "third and last time," knocking down the poor miner's stock to one of the Shylocks, or their friends, and his hopes into a "cocked-hat," and sending himself "kiting" once more up the mountain's side, with

Heavy heart and pockets light,
And a sage-brush for his couch at night—

Once more to make a "strike;" to dig and delve in its development, preparatory to his running the "gauntlet" again of the gentlemanly class(?) of the "stand and deliver" order. That this picture is but too true, and that it has done most serious injury to the advancement of this, as well as many of the surrounding districts, is too patent to all. However, the experience of the past may be of advantage in the future, and "honest miners" must console themselves with the recollection, that if they have not had profit, they have at least had insight. J. R. M.

Austin, Aug. 5, 1865.

[To be continued.]

A Baptism by Electricity.—During a drill of the cadets at West Point, a short time since, the battalion had an electrical baptism. A cadet communicates to the Hartford *Times* the following account of the singular occurrence:

The weather looked very much like a thunder shower, still not a drop of rain fell on the Point; we had just countermarched in column and the battalion was at a support arms—which you know, is with the gun resting on the hammer on the left arm, the muzzle pointing some distance above the body.

I happened to be looking up at the time, and saw a large, dense, black cloud hovering overhead, when suddenly there was a very vivid flash and a loud report at the same time, the report resembling that of a shell exploding, having none of that rumbling peculiar to distant thunder. My first impression was, as I knew they were firing across the river, that one of the guns had burst and the shell had taken a crooked path, as it often does under such circumstances, and had burst overhead. I involuntarily ducked my head for falling pieces. This all passed through my mind on the instant, and you know how quickly one thinks under such circumstances.

Of course, when I saw the guns flying out of the men's hands, and felt a numbness in my arms, I knew what was up, or rather what had come down. Quite a number of men were stunned so that they went reeling around for some minutes, and one man (a yearling) was knocked senseless. I thought at first he was a "goner," but they took him out on the plain, poured water on him, rubbed him, &c., and he came to in about fifteen minutes, when they took him to the hospital. Next day he was all right, except a little weak.

Col. Black was also struck, knocking his horse down on his knees, and frightening the "animile" somewhat. I suppose the reason the cloud discharged itself was that it was quite low down, and was strongly attracted by the conducting surface of about two hundred bright gun-barrels, all pointing vertically upwards. Had it been only a small body of men, say guard-mounting for instance, I suppose it would have been more destructive. As it was, it seemed to have diffused itself over the whole corps, as almost every one in the battalion felt it more or less, and in every company a dozen or more guns were knocked out of the hands of the owners. On the whole I think it was a pretty good little electric experiment, though I shouldn't care about trying it over again.

Will there be Winters in Heaven?—Without suffering and pain, we shall become acclimated in the new world to which our lifeboat is fast nearing; the hours will pass away without a Winter, I think. Nothing so earthy will have a part in the spiritual life.

We shall find an unchanging clime, where chilled forms never shiver in the cold and sleet, nor sad hearts freeze with inhumanity and contumely! No hungry beggar for bread or love will he found in the circles of Heaven; no friendless and forsaken being will wander alone in the crowd of the new life. The mornings will not be ushered in with gloomy skies, piercing winds, and damp mists; nor the evening creep toward us with cold fingers and wet eyelids. If there are dawnings and twilight hours, they will be radiant with pearly hues and softened lights peculiar to the spirit land, so beautiful, so rare, so delicate, human conception cannot picture it.

The Winters will leave us as we pass out of the Autumn of this life to the eternal summer of the next; and whatever the clime of Heaven, we are confident it will be without chill, cold, gloom and death.. No Winters in Heaven.

The Intemperate Soldier.—We would not cast a single shadow over the warm greetings which our returning soldiers deserve from their countrymen. Cold must be the heart that will not grow warm at the sight of those bronzed veterans; unworthy the hand that will not do good to them. But one way to do them good is to recover any who may have fallen, through the temptations of army life.

That reeling soldier, who went forth pure and innocent from his father's house, is no common drunkard. You who then said to him, "Go and God be with you," must not now "pass by on the other side," and say, "Oh, he is some drunken soldier!" Remember the wild excitement of battle; remember the "whisky-rations"; remember what you might have been; remember a country saved. If he staggers up to your door, it is your country pleading through him for efficient action in the cause of temperance.

Pompeii.—Some important discoveries have been lately made at Pompeii. Among others is a sun-dial, with numerous Greek inscriptions. A very valuable and rare cameo has also been found by a child, and placed in the collection of the Museum at Naples.

The First Printers.

The first printers were Titans, and they performed a Titanic work. They were not merely skilful mechanics, or plodding artisans; they were, indeed, what the exigencies of their task required them to be, scholars, patriots, philanthropists, the first of their age. They were men of large intelligence, with a right conception of the new power which printing had introduced into the world, and a clear consciousness that they were laboring for the illumination and improvement of the species. And they caught the inspiration of their lofty mission. They addressed themselves to their work with the hearts of heroes, and the spirit of martyrs. Their difficulties were enormous. The early printer had often himself to prepare the work he was to print, either of translation or by original authorship. He had to make his own printing press, to found his own types, and manufacture his own ink. He was compositor and pressman, and corrector of the Press. He had to bind his own book. He was his own editor, publisher, and bookseller. The outlay of money was necessarily great. Some embarked a small fortune in the enterprise, and were ruined. One, after laying out a large sum on apparatus and materials, and spending years at his task, died broken-hearted, probably, before he had finished the printing of one book, when his materials and unfinished work were sold for a trifle. Two German printers, who carried their presses to Rome, complained in a supplication addressed to the Pope, that at vast cost and labor they had printed twelve thousand volumes, but for want of buyers they were no longer able to bear the expense of housekeeping; their dwelling was full of printed books, but destitute of every necessity and comfort. Others encountered the active opposition of malignant despotism, and suffered death for their heroic efforts in the cause of human enlightenment. It was such struggles, sacrifices, and sufferings, that the Press conquered for itself, and so, for knowledge and for truth, a world-wide empire. These early printers were a noble race, and deserve to be held in veneration as among the first benefactors of mankind.

The Working World.—Work, of the muscles or the brain, is one of the conditions of human happiness. Without it there can be no wholesome enjoyment. The idle man seeks a substitute for the healthy excitement of labor in vicious indulgence, or degenerates into a being only a few degrees above the lower animal. His soul and mind, in the one case, become degraded and debased by false uses; in the other, they rust with him, and he is left to the government of the mere instincts which he possesses with the brute.

The truest life—that most accordant with our nature—is one in which physical as well as mental labor are judiciously mingled, alternating with such reaction as tends to refresh and renovate both. Neither constant toil nor incessant toil is advisable. When both head and hand are weary try a little amusement—light reading of a wholesome kind, a romp with your children, if you have any, a social evening with your neighbor—anything in fact, that may properly be warranted to wear well, and it will not be clouded with fits of the blues. He who lives it, will be younger in feeling at fifty than the fast man, whose career has been a gallop after excitement, at thirty-five.

If you belong to the working world, and eat your bread in the sweat of your brow, do not fancy, therefore, that you have no opportunity to enrich your mind. Labor, thank heaven, is not so ill paid in this country that the toiler cannot afford to throw down his tools now and then and cultivate his intellect. Two-thirds, at least, of our distinguished men have been farm laborers or handicrafts-men. Very few of them were "college bred." Our common schools impart all the instruction necessary to enable their pupils, in after life, to educate themselves thoroughly in the highest branches of knowledge which the human mind is capable of mastering. Moreover, let it never be forgotten that our greatest statesmen, discoverers, inventors, scholars, and artists, have sprung from the ranks of Labor, and not from the Silk Stocking classes.

Our Political Status.—There are now thirty-six States, of which only eleven (less than one-third), were in rebellion, and thus, the States that remained loyal have a majority of twenty-eight in the Senate. In the Lower House, the loyal States have 181 out of 242 Congressmen—a majority of 120 over the late rebel States. The preponderance of the loyal element appears to be sufficient to secure us against any return to the old subjection. The domination of the South grew up while the slave-aristocracy were in power and united, and while they had half of the Senate and nearly half of the House—a condition of affairs that cannot return again.

Checking Perspiration.—Edward Everett, the finished scholar, the accomplished diplomatist, the orator, the statesman, the patriot, became over-heated in testifying in a court room, on Monday morning went to Faneuil Hall, which was cold, sat in a draft of air until his turn came to speak; "but my hands and feet were ice, my lungs on fire. In this condition, I had to go and spend three hours in the court room." He died in less than a week from the checking of the perspiration. It was enough to kill any man.

Professor Mitchell, the gallant soldier, and the most eloquent astronomical lecturer that has ever lived, while in a state of perspiration in yellow fever, the certain sign of recovery, left his bed, went into another room, became chilled in a moment, and died the same night.

If while perspiring, or while something warmer than usual, from exercise or a heated room, there is a sudden exposure to a still, cold air, or to a raw, damp atmosphere, or to a draft, whether in an open window or door, or street corner, an inevitable result is a violent and instantaneous closing of the pores of the skin, by which waste and impure matters, which were making their way out of the system, are compelled to seek an exit through some other channel, and break through some weaker part, not the natural one, and harm to that part is the result. The idea is presented by saying that the cold is settled in that part. To illustrate:

A lady was about getting in a small boat to cross the Delaware; but wishing first to get an orange at a fruit stand, she ran up the bank of the river, and on her return to the boat found herself much heated, for it was summer; but there was a little wind on the water, and the clothing soon felt cold to her. The next morning she had a severe cold, which settled on her lungs, and within the year she died of consumption.

A stout, strong man was working in a garden, in May. Feeling a little tired about noon, he sat down in the shade of the house and fell asleep. He awoke chilly. Inflammation of the lungs followed, ending after two years of great suffering, in consumption. On opening his chest, there was such an extensive decay that the yellow matter was scooped out by the cupful.

Multitudes of women lose health and life every year in one of two ways: by busying themselves in a warm kitchen until weary, and then throwing themselves on a bed or sofa without covering, and perhaps in a room without fire; or by removing the outer clothing, and perhaps changing the dress for a more common one, as soon as they enter the house after a walk or a shopping. The rule should be invariable to go out at once to a warm room and keep on all the clothing at least for five or ten minutes, until the forehead is perfectly dry. In all weathers, if you have to walk or ride on any occasion, do the riding first.

How the Ladies are "Presented" to Victoria.—The etiquette observed on a lady being presented at the British Queen's drawing room is as follows: On getting out of the carriage, everything in the shape of a cloak, or scarf, even of lace, must be left behind; the train folded carefully over the left arm, and the wearer enters the long gallery at St. James, where she waits until her turn comes for presentation; she then proceeds to the Supreme Chamber, which is entered by two doors; she goes in by that indicated to her, and on finding herself in the Presence Chamber, lets down her train, which is instantly spread out by the lords-in-waiting with their wands, so that the lady easily walks forward to the Queen. The card on which the lady's name is inscribed is then handed to another lord in waiting, who reads the name aloud to the Queen. When she arrives just before Her Majesty she courtseys very low, so low almost, but not quite, to kneel before the Queen, who, if the lady presented be a peeress or a peer's daughter, kisses her forehead; if merely a commoner, holds out her hands to be kissed by the lady presented, who having done so, rises, and making another courtsey to any member of the royal family present, passes on, keeping her face toward the Queen, and backing out of the door appointed for those to go out of the Presence Chamber.

Recent Quartz Sales in Amador.—The *Union Advocate*, of Amador county, says that Messrs. Tullock & Co. have sold their quartz ledge, near Volcano, to a Sacramento company, for $12,000. The same company purchased the ledge of Eastman & Co., at Russell's diggings, paying therefor $10,000. Bids, at heavy figures, have also been made for some of the older established mines in that county, but the owners refuse to sell.

City Stock Reports---San Francisco Stock and Exchange Board.

From the "Weekly Stock Circular" of the Associated Brokers.

San Francisco, Saturday Morning, August 12th, 1865.

There is no appreat dimiautioa ia the amouat of capital offeriag for loan purposes, hut the demand on such securities as the baokers are williag to accept, is ligbter thaa for some time past. Business reqnirements are moderate, and good mercaatile paper passes readily at 1¼@1½ ₱ cent. per moath. The fluctuatiag character of many of the stock collaterals offered iaduces continued caution on the part of lenders, and more discrimination in tbe choice of aames, as well as secnrities. Ia the open market accommodations are obtained at 1½@2½ ₱ ceat. per montb.

The receipts of Treasare from the interior mining districts, during the week, amounted to $1,200,000, makiag aa aggregate siace the 1st inst. of $2,250,000. The yield of Nevada has shown a slight falliag off since July 1st, as compared with a correspondiag period last year.

Transactioas in Bullion bave beea ligbt siace last steamer-day, most of the receipts having goae into the Mint. Returas from tbat establishmeat are now made promptly in about three days, and depositors fiad it more profitable than to sell it at current market rates. Gold Bars will realize ahout 850@860 in the Mint, aad at tbe present moment are bought hy dealers at 825@830. Silver Bars are ruliag at ¼ ₱ ceat premium to 1 ₱ cent discount.

Legal Teader Notes have beea inactive at the Board, hut large sales were made oa tbe street within a range of 73¾@74½c. Considerable amouats have beea converted this week into 7-30 Government Bouds, and a good demaad has prevailed for other purposes. We are in receipt of ao later telegraphic advices from the East.

The Sbare Market since Saturday last has been somewbat variable aad irregular. Most leadiag stocks are stronger, aad have beea dealt in at eabanced rates, while others are in rather less favor, and inactive at lower figures. No iaportant developments have been made this week, but certaia iadications were met with of sufficient eacouragement to iaduce a little speculation in a few claims. Notwithstaadiag the appareat uaremunerativo character of most investmeats at this time, a aumber of operators seem to he eager to become buyers upoa the least show of aa advaace.

Gould & Curry was sold at $1,500@1,450, aad is now held at $1,500. The receipts of bullion from tbis miae for tbe month of July exceeded $175,000, and a surplus remaiaed at the credit of the company after the paymeat of tbe last dividead. It is estimated by those who appear to be well informed on the subject, that a reserve of at least 25,000 tons of good ore can yet be takea from the upper portion of the miae.

Alpha has met with no sale tbis week, and is freely offered at $1,450. The hoistiag works of tbis company are now in successful operation, and it is thought tbe product of tbe miae will bencefortb be largely increased.

Yellow Jacket has heen ia much hetter favor, and 137 feet were sold, advanciag from $1,200 to $1,350, receding to $1,295, rallyiag to $1,350, and chaagiag baads yesterday at $1,370@1,400. During tbe last week in July tbe product of tbis miae amounted to 1,381 toas of ore, averagiag $37.19 per ton, 302 tons of which were worked at tbe company's mills, and 1,088 tons at outside mills. A aew developmeat was made tbis week in the southern portion of tbe miae wbich is said to promise well for tbe future. Tbe actual reduction of the debt of this compaay amouated to $40,071.89 over and above extraordinary expenses, which exceeded $50,000.

Savage has been tolerahly well maintained withia a range of $1,200 @1,230, closing at $1,210 bid, $1,220 asked. There is ao material cbaage ia auy portioa of this mine.

Crowa Poiat is decidedly stroager, and 75 feet were sold, advancing from $950 to $990, recediug to $980, rallying to $1,070, and closing at $1,110. The main shaft is now down below the 300 feet statioa. Tbe nortbeast end of the 230 feet level is said to show a body of ore 25 feet wide.

Belcher is inactive but stronger. Trifling sales were made at $840@900, closing at $900 bid. Hale & Norcross was sold at $550.

Ophir opened at $415, rose to $425, fell to $395, aad sold at the close at $395@365.

Empire Mill & Miaing Compaay was sold at $425 ₱ share, ex-dividend of $20 ₱ share paid on the 10th iast. Tbe receipts of bullioa from this miae for the moath of July amounted to some $70,000. Some 3,000 tons of 2d aad 3d class ore were hoisted to the surface during this period, about oae-half of which was treated at tbe company's mill.

Chollar rose from $495 to $510, buyer 30, recediag to $475, seller 30, and $485 cash, and sold yesterday at $500. Within this range 278 feet were dealt ia. Tbe southera portioa of the miae is yieldiag about 50 tons of ore per day.

Potosi has been active, and 364 feet wero sold, opeaing at $480, dropping to $455, rallying to $470, then receding to $450, and closing at about $472. Tbere is said to be ao material chaage in tbe appearance of the lower level of this mine.

Uncle Sam, early in the week, was in more favor than at the close of last week, advaacing from $270 to $315; since then it declined to $215, rallied to $250, and closed yesterday at $240@230—ia all some 834 shares changiug hands.

Overman rose to $300, fell to $200, rallied to $240, aad sold yesterday at $235@230. From the 4th and 5th levels of this mine about 100 tons of ore are aow takea, but receat crushings are said to be uafavorable.

Imperial opened at $230, fell to $220, advanced to $227½, ex-dividend of $10 ₱ share paid on Thursday, tben sold at $230, aad closed at about $226. The first cleaa up this month from the company's mills is said to be very favorable, realizing over $30 per ton.

Minerva fell from $155 to $140—assessment unpaid—aud is now held at $140. Active operations are to be resumed by the aew incorporation in the 400 feet of ground adjoiaing the Alpha claim. The Exchequer company comprises 8,000 shares of stock, aad is inquired for at $30 per share.

Bullion is in rather less favor, and 126 shares were sold, declining from $172 to $157½, and closing at $150. Confidence fell from $135 per ₱ share to $120, and sold yesterday at $120.

Daney met with a decided improvement this week, and 600 feet were dealt in, steadily advaacing from $15 to $50, aad selling yesterday at $35@41. Advices from this claim are favorable. Ia drifting west, at a depth of 200 feet from the aew shaft, a body of good ore has beea disclosed, and in runniag from the 265 feet level, under the old works, some pay ore has also beea found. Developments in the prospecting shaft, sunk on the west end of the miae are said to promise well, and from this poiut ore coataining some gold is being hoisted to tbe sarface.

Sierra Nevada has been dealt ia to the exteat of 1,500 shares, decliaing from $29 to $20, and closing at $21. North American fell from $41½ to $30, and sold yesterday at $32. Lady Bryan was sold at $6½@6; Goldea Rule at $11, and Nevada, J. G., at $15@25.

Tbe total recorded sales of stocks aad Legal Tender notes, since Saturday last, amounted to $1,126,331.

works, was established the Mechanics' Institute of San Francisco, with its occasional exhibition of the products of the genius and handicraft of the mechanics of our State.

It is in comparison of results, that rivalry is encoursged. It is in the exhibition of modols snd improved machinery that invention is stimulated. It is healthful and pleasant to mingle together in social and intellectual companionship.

The occasional Fair and report is a milestone upon the road of progress, while the financial profits huy books for the library and turnishes reading room and club, where conversation, smusement aud recreation affords a relief from the weary tedium of constant lahor.

California hss made rapid and substantial progress in sll the practical and elegant arts, but still there is a wide field before us for further advancement.

It is but a brief period of time since this, our beautiful State, was almost unknown to tho civilization of the world. It lay like a white and glittering pearl upon the ocean's shore; valuelcss in its unnoticed heauty, till found and set with other jewels in our glorious diadem of States. Less than twonty yoars ago, where we now assemble, the coyote called his mate; and in the chspparel of the sand hills, the long-earcd rabbit found his home; in our harbor a single hide drogher swung lszily at anchor, awaiting its freight of skins and tallow. Now mark our great metropolis with its enterprize, its learning, and its wealth. Now mark our husy commerce, that plies to every ocoan; then our glorious valleys lay husking idly iu the sun; now, teeming with husy industry, ladón with hending grain, our hill-sides rosy with the fruitful vine. Then our mountain cavorns held enchanted wealth, till touched with the magic of industry, the spell wss hroken and poured their streains of golden plenty through the land.

I know it is a hackneyed theme to dilate upon the fertility, resources and greatness of our Stste; I know we aro accused of vanity and hoasting; when abroad we undertake to descrihe the marvels of our wondrous land, but who that hss lived famid its pleuty, and drank from its cup of bounty, who that has breathed its glorious stmosphere snd trod upon its fertile soil, that does not love this new home of our sdoption, nnd love it the more, hecause it is ours and new? Beoause hy our valor we conquored it; by our industry we created it; hy our enterprize we have developed it, and hy our loyalty we have aided to maintain it.

We are vain and proud, not only of what we are, hut for what we propose to become—first of the American States; first in morals, learning and wealth; first in agriculture, msuufactures and commerce; first in wine, and wool snd gold; first in industry, enterprize and genius; first in hrave and honorable men, as we are now first in beautiful and virtuous women.

The Lexington Oil Well, owned by the Santa Clara Petrolcum Co., and located near the Moody saw mill, in Santa Clara county, is now down 230 feet. This well is under contract to be hored to the depth of 400 feet. At the depth of 220 feet a seam was struck which it was estimated would yield about five barrels in twenty-four hours. That nmount would be largely increased by opening the seams which had been found above. All the seams nre now closed up by the tubing, and the contractors will continue boring until the depth of 400 fect is reached, unless a flowing stream should be found sooner, and the contractors released from their obligations. We have seen a series of samples of this oil, exhibiting it in its crude state, and also refined, showing the illuminating oil, the lubricating oil, the benzine and the tarry residuum. An assay, by Prof. Benoist, gives the following result: Burning oil, 55 per cent; lubricating, 25; benzine, 5, and tarry matter and water 15, much of which might be utilized by a more complete proccss. Much intercst is felt in the degreo of success which may attend the opcrations at this well, as they will be considered indicative of the value of the entire district.

Sound and Light.—Sound is thought to be produced by the vibrntion of gravitnting matter; whilst *light* is supposed to be produced by a similar vibration of the particles of a nongravitating matter, cnlled luminiferous (light-bearing) ether. It is a principle of resonance, that if we sound by voice or instrument a given note in the immediate vicinity of a pianoforte, the string which when struck gives out the vibrations due to that note, immediately takes it up, absorbs it, as it wore, and again gives it ont as an answering sound of slighter intensity; so the lumiuiferóns gases, as ether, are capable of absorhing a transmitted ray of light and emitting the same with a diminished intensity.

The tongue was intended for the divine organ, but the devil often plays upon it.

sort of an intangihle, vsgue helief that to drive them out would be in contravention of some treaty hetwoon the Empire of China snd the Government of the United States, or would come in conflict with some clause of the Constitution of the United States.

It seems very strsnge, that as a sovoreign State, we hsve not the right to abate this evil, and put an end to it. We have a right hy the enactmeut of qusrantine laws, to prevent the introduction of contagion and disease among us, yet we have not the right to prevent persons from coming to the State tainted with infectious diseases; laws may he enacted to prevent the spread of pestilence, and yet we. must, in order to encourage commerce and that we may not interfere with any laws of Congress for its regulation, suffer our State to ho inundated with this moral coutagion.

We pass laws preventing the introduction of licentious books, immoral paintings, srticles of gaming, tainted food, dangerous preparations of gunpowdor and all nuisances, and yet we may not he permitted, in the exercise of the same power, to exclude a class of humanity, who are licentious, immoral, gambling and dangerous.

We may, by State laws, throw overboard from any foreign ship, such goods as are hurtful to our health or destructivo to our morals, and yot a ship comes into our harbor loaded down with Chinese prostitutes, reeking with filth, stinking with strange odors, rotting with strange diseases, and tbey must be admitted as part and parcel of the community; wo must mix and mingle with them; eat from the same markets, traverse the same streets, and hreathe the same atmosphere.

I do not concede that hy it the Chinese are not equally taxed, that in the compact between the State and themselves they aro not fairly treated and honorably dealt with. The State says to the citizens of the Empire of China, we know your exclusive laws, we know your peculiar vices, your contagious diseases; you wish to come to our country, dig our gold and temporarily remain here till you can accumulate enough to make you independent on your return. You will not bring your families, you will not seek homesteads among us, you will not even bring your virtuous women to the State. You will bring your prostitutes to minister to your lusts and scatter disease and death among our dissolute snd depraved, you will not acquire property that we may tax, you cannot hecomo citizens; we will exact from you neither jury duty nor require you to perform military service. You may not organize yourselves into fire companies, nor shall any public service he required of you. We will send our ships for you and bring you here at a low price of passage. We will settle your disputes in our Courts, we will protect your trade by our laws, we will guard you by our police, we will maintain your sick in our hospitals, we will guard your criminals in our prisons and our jails; you shall go to our mines and dig our gold and take it home with you to China without stamps on your hills of lading or tsx on your exports; worship Josh after tho dictates of your own stomachs, and in your pagan mummeries none shall molest or make you afraid; you shall feed your dead ou pork, and your living on fish caught from our waters, and rice of your own importation—and for all this you shall contribute to the support of our various governments, municipal, county and State, aud if you are not content to do this you may leave the country.

Perhaps a hroader humanity than mine would welcomo to our land and to the equality of our laws, all the tawny races of the world. And while I hope that my liberality is not hounded or circumscribed by sympathy for my own race snd color alone, I would still in my selfish love for the Saxon family save America for the Saxon rule. I would say to the descendants of Attila, Janghis Kahn and Tamerlane—to the worshipers of Josh and the diciples of Confucius, stay in your own rich and populous Empire—we want none of you. China is yours. Keep it. Let your people imitate the valor of their ancestry; let them perform their deeds of heroism in flinging stink-pots amid the clanging gongs of their own civil wars; let them pursue the crnft of their cunning toil, carvo their gaunt images for toys, and from ivory whittle their ingenious puzzles, raise their tea and rice; we will trade with you, and, in exchange of commodities, he ever civil. Your merchants may do business in our ports, and ours shall live in yours. We will maintain with you the faith of commercial treatios, hut our soil shall never hecome tho refuge of your redundant population. The Anglo Saxon rnce will carve out its own destiny, in its own way, will make its own laws, mould its own charactor on tbe continent where Providence has placed it.

I would enact laws to prevent their women and their gamblers from coming to our shore; and if for a time we permit their industrious laborers to find a home among us, it should only he hecause they are useful to us. With my consent none of tbe race should be horn upon our soil. Tbus, if their numhers ever hecome embarrassing, we could legislate against them, and the ovil would die with the generation.

The length of my manuscript admonishes me that I must not too far tax the patience of the institution, that has so honored me this evening. I have only heen able to glance at topics of interest, in every one of which there is material for profitable reflection.

For the purpose of making California truly great and truly prosperous, to contrihute towards the huilding up of a State upon this coast, that should become the admiration aud envy of all, and for the purpose of making the industrial interests to he known and sppreciated; for the purpose of aiding in these great gives Congress the power to regulate commerce with foreign nations—Judge Field dissenting.

The Court undertook to find nn analogy hetween this case and a law of New York and Massachusetts, which put a tax upon alien passengers arriving in the ports of New York and Boston. In the argument of that case it was my duty, as attorney for the State, to endeavor to sustain the law. One or two extracts from the brief filed at that time, express my unchanged opinion upon the propriety of inviting to our shores a race with which we can never assimilate.

In commenting upon the passenger laws I ssid New York aud Boston, the two great emporiums of American trade, the two grest entrepots of foreign commorce, sought to impose for the benefit of their respective localities (already grown rich and prosperous from this trade), a tax upon alien passengers. These aliens were tho sturdy, industrious immigrants of Christian Europe; they had duriug half a century and more huilt up the great empire of the Americon Union; they were then contributing to the settlement and development of the West. Before their sturdy march forests disappesred, the Indian retired, snd civilized States sprsng up in their path.

To secure this immigration had heen the chosen policy of tbe Government. Laws of naturalization were made for its encourssement. Immigration societies sent apostles to preach the inducemonts of American residence throughout Europe. Great political parties vied with eacb other in this hid for immigration, and then hid for proselytes to their political faith. It was not, therefore, strange that when two cities on the sea-coast sought to make their ports the golden gates through which this current of passengers should pay tributo, that every sentiment of fairness should array itself against this selfish extortion; that this sentiment penetrated within the sacred precincts of the Courts, and that even the Judges of the Supreme Court of the United States, always somewhat inclined to enbance their own dignity of position by taking power to tbe tribunal over which they presided, caught this opportunity of taking power from States and conferring it upon the United States.

But how would it have heen if, instead of the two cases from New York and Boston, where by State laws they sought to exact a tribute from the poor immigrant whom the whole nstion was coaxing to its shores, there had been presented the csse of the People of the Stste of California against Downer, in 7 California Reports, where the People of California had, for the purpose of discoursging Chinese immigration, imposed a tax of $50 upon their landing, and the argument had gone to them in this wise: The State of California had heen conquered from Mexico by tho hlood of our citizens, had heen settled by the enterprise of the young men of the American people; hore they had hrought their families and made their homes; here they had discovered inexhaustible rsources of mineral wealth—gold, silver, copper, quicksilver and coal. Geographically, we are on the very western verge of the coutinent, and this hrings us in vicinage with Asia and its redundaut millions of inhahitants, who possoss all the vices, follies and diseases incident to redundancy of population.

An avaricious people, they have been induced hy greed of gold to hreak down their harriers of prejudice, and withdrawing themselves from the isolation of centuries, they have overloaped their great wall of Chinese exclusiveness, and are, like the lice and frogs of Egypt, overrunning our people; they inundato our shores and hasten to our mines to rob us of the gold which is the inheritance of our miners; they bring their own supplies, that they may not enrich our merchants; they bring no wives or virtuous women to our land; tbey speak not our language and seek not to acquiro it; they do not attend our schools and hring none of their youth who might in time assimilate with our people; they are of a different race, lineage and tongue, and cannot mingle with us; tbey believo not in tbe Christian religion, worship not the Christian God, but bring with them the graven imsges of their idolatry, and avoiding our Christian churches huild their heathen temples, and practice their barbarous rites in our midst. By the laws of China, virtuous women are forbidden to immigrate, and in their place comes the most vile and ahandoned from their sea ports, with dresdful diseases that defy the skill of surgery and the art ot medicine; in the midst of our strcets, in the presence of our wives and daughters they practice with shameful impudence their hrazen arts of harlotry. Accompanying them is the gamhler, the opium eater, the debauchee, who live with and upon these abandoued women and make night hideous with the insane ravings of their intoxicated madness and the howlings of their strange excitement.

As an offset to this demoralization, they come in our ships, as they have none of their own; tbey huy boots which they have not the ingenuity to make, they consume some hraudy of most poisonous kind, they ride in our stage coaches from ono mine to another as they deplete our placers; they import and sell goods and trade with each other, to the injury of our merchants; they hring not here any part of the usoful industry of their country; they import their rice but make no effort to produce it from our tule lands, useless for other cultivation; they import their sugar, nor seek to ndd to Calbfornia's productions by attempting to raise it here. In a word they are a nuisance in socicty, are useless to the commerce of the State, are a curse in the community, and are only endured hy a patient people hecause there is a

I shall not disouss the question of slavery, it has had its day, it has performed its mission and slavery no longer exists in the land. But we have n duty to perform toward the emsncipated hlacks, from which we must not shrink nor turn back. They must not be imposed upon by their former masters; idleness and vagrancy must not he permitted, ignorance removed, industry euforecd, and justice, hetween master and servant, firmly administered.

The African wss born on Southern soil, and however hard may have been his lot, he is attached to that soil; to him the plantation is home, and the South his native land. It is his natural right to live whore he wss born; to die on the soil which gave him birth and on which long generations of his ancestors have toiled, is his legitimate heritage.

It is a remarkable fact, that during this long and hloody civil war, the issue of which involved the freedom of the slave, there was no slave insurrection, not an organized strike for liberty. Whether the negro was content with his lot, whether he wss hrutalized with long gonerations of servitude, whether he was ignorant of the principles at issue, or whether he reposed upon the conviction that his deliverance was in the hands of a highor and mightier authority, we know not; the fact is nevertheless a remarkable one, that within the sounding roar of artillery that thundered forth to him the hope of freedom, ho was content for four years to do his master's work; not from fear, because when on the hattle-field ho exhibited a courage equal to the nohlest race; not from ignorance, for wherever tho armies went, there had gone before them tho informstion of the war; not because the black lacked fidelity to the hope of their emancipstion, for the loyal fugitive could always depend upon the aid of the slave, to guide, and feed, and protect him. I account for this fact in no other way than this; the African loves the spot of his hirth; he is timid and not self-reliant; he loves his home; he is held hy the memories of childhood days; he is attached to his domestic hearth; he will not willingly sever the ties that hind him to home, and wife, and child, and mother, for the uncertain exporiment of freedom in a strange part. This element iu the uegro character, will, in my opinion, enter into and make easy tho establishment of new relations hetween the master and the slave. Mutusl interest will control, and I look forward to the speedy coming time, when in all the Southern States, the master sball become a paying employer, the negro a willing lahorer, with contentment and prosperity to hoth.

Let the Negro fill the position which God has given him. Let him he protected in his freedom; in bis domestic ties; let him be compensated for his labor; let him be educated to the extent of his capacity; let him he protected in his life and property; let him have freedom of religious worship, snd let him be content.

Either his race, or mine, is the superior. I think mine is, but whether it is or not, becsuso it is mine, I would have it retain all the political power; I would not invest the Negro with the privilege of the elective franchise; I would not qualify him as a juror or enable him to hold office or in any wsy seek to esta lish with him relations of social equality. From centuries of darkness he emerges to the light of a hrilliant day, and at a fearful cost to our country; after generations of ignorance and slavery, though not his fault, he must serve some time a pupilsge to intelligence and freedom. When, in later years he shall havo demonstrated his capacity for the responsible enjoyment of the electivo privilege, it will then be timo enough to consider it. I would rather limit the elective privilege, by taking it awsy from the ignorant, the vicious, and the disloyal of my own race, than by indiscriminate extension to tho Africau aud Mongolian.

In reference to the Chinese: It must be ad mitted that there are some present nnd immediate henefits attending the presence among us of the industrious working male; they work exhausted placers, content with smaller gains than the white laborer, and it is undoubtedly desirable to extract this gold and give it circulation, although but even a small percentage inures to the benefit of the country, rather than have it buried in our hills. The Chinese do much of the menial work, and are employed in certain classes of manufacturing with profit, doing that lighter work which in Europe is performed by women and children, and thus perhaps, enabling manufacturés to employ white laborers in greater number by reason of their profits from the Asiatic.

But, in my opinion, the evils to be anticipated from Chinese immigration outweigh all the henefits, and that it is not wise or prudent to advance our national interests at the expense of the moral welfare of our people. While therefore, I am prepared to concede the desirableness of certain classes of tho Chinese, their merchants, and industrious laborers, and concede that they are innoffensive and law-abiding, I must not omit tbis opportunity to denounce as hurtful and destructive, the immigration of their women, their gamhlers and opium eaters, whose presence in our towns aud villages is most demoralizing and whose existence in the very heart of the city of San Francisco, is an offeusive sight.

Our Supreme Court in the caso of Lin Sing against Washburn, has determined that the Act of 1862: "*An Act to protect free white labor against the competition with Chinese Coolie labor and discourage the immigration of the Chinese into the Stote of Californio,*" was an violation of the Constitution of the United States, which

It is Impossible for editors to know ALL the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides and the evidence of any error which may appear will be received in friendship and treated with respect.

American and Foreign Patents.—Letters Patent for inventions can be secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past two years.

Favorable to Inventors.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

Payment in Advance.—This paper will not be sent to subscribers beyond the term paid for. The publishers well know that a good journal cannot be sustained on the credit system.

San Francisco:

Saturday Morning, Aug. 12, 1865.

Removal.

The Office of the MINING AND SCIENTIFIC PRESS has been removed to the old printing stand known as Waters Bros. & Co., southwest corner of Clay and Sansome streets, opposite the Niantic Hotel (being one block south of our former location), where we may now be found, with more commodious apartments and an extensive JOB PRINTING OFFICE.

San Francisco, April 10th, 1865.

Canvassing Agents.

We would call attention to the following named agents of the MINING AND SCIENTIFIC PRESS as gentleman worthy of the countenance of any community which they may visit, and assistance rendered them in their efforts, by friends and old patrons, or our brethren of the PRESS, will be acknowledged as a personal favor to us:—

Mr. Robert Lattimore—Amador and Alpine counties and the State of Nevada.

Thos. Poyzer, of Orass Valley, for Nevada, Yuba and Sierra counties.

NEWSPAPORIAL.—The Red Bluff *Independent* has come to hand enlnrged and otherwise improved. It has jnst entered upon its sixth volume. The Napa *Register* has entered npon its third volume, and is doing yeoman service for its locality. The Folsom *Telegraph* commenced n new volnme with its issne of the 5th instant, and looks hright nnd new as ever. Thnt sterling journal, the Stockton *Independent*, one of the ahlest pnpers on the Pacific coast, has jnst entered upon the fifth year of its existence. The California *Rural Home Journal* has completed its first half-yenrly volume, and is one of the nentest and best agricultural journals published.

HEAVY RAILROAD TRANSACTIONS.—It is said thnt the Californin Steam Navigation Company has purchnsed the Onkland Ferry nnd Railroad line, and thnt the railroad is to he extended to Goat Island. It is also rumored that the Almeda Railroad is to he consolidated with the Oakland road. If the consolidation is effected, it is said that the preseut route of the Alameda rond, from High street station to Snn Leandro, will be nbnndoned, and a new route for the consolidated compnny located east of tho telegraph road. It is also stated that George F. Bragg, President of the Snramento Valley Railroad Company, in hehalf of himself and severnl capitalists of this city, has purchased the interest of Pioche, Bayerque & Co., and L. L. Robinson, in that road, amounting to nearly one-half of the stock.

VERY PROPER.—It is proposed to erect a magnificent hridge over the Potomac at Washington, as a monument to the late President. It is to he called "Lincoln Bridge," nud n colossal statue of Mr. Lincoln is to ho placed in the center, or nt one end of the structure. Such monuments are far more appropriate than piles of marhle or grnnite designed for show only.

A HUGE LOAD.—Mr. Samuel Corrington recently hauled a little over *ten tons* from Placerville to Gold Hill, Nev., in one wagon, drawn by ten mules.

EXPERIMENTS WITH GUN-COTTON.

Some time ago we called the public attention to the experiments with gun-cotton in blasting, which were then in progress in several of our principal mines. We are now able to lay before our readers the results of what appears to have been a very thorough investigation.

Many years have elapsed since gun-cotton was first manufactured. In 1846 it was confidently predicted that the material would supercede gun powder, both for artillery and blasting, but owing to the occurrence of several disastrous explosions, which were ascribed to the spontaneous ignition of the gun-cotton, its manufacture, in any considerable quantities, was not, until recently, undertaken. The new process, invented by Baron Lenk, an Austrian, was patented, and extensive works for the manufacture of the gun-cotton were erected by Messrs. Thomas Prentice & Co., of Stowmarket, England—men of great enterprise and large means. The shipment of their patent gun-cotton to California was, we believe, the first attempt made to introduce it on this continent (although its stability and value had already been thoroughly demonstrated) and we doubt not that intelligence of the results of the experiments here, is awaited with interest. Before we proceed to show these results, we will give a brief summary of the advantages which such men as Professor Abell, F. R. S., Professor E. A. Hadow, F. G. S., and John Scott Russell, F. R. S., the civil engineer, maintain in favor of gun-cotton:

1. There is no smoke from the explosion of gun-cotton.

2. Time, damp and exposure do not alter the qualities of gun-cotton. It has already been preserved ten years without injury or decay.

3. It can be transported through fire without danger, by simply being wetted, and when dried in the open air it becomes as good as before. In case of a building or a city being on fire, this quality may he of the greatest valae.

4. It is much safer than gun-powder, owing to its being manufactured in the shape of rope or yarn. Loose gun-powder escaping from its package, or spilled by accident, is a constant danger or cause of explosion, from which manufactured gun-cotton is free.

5. The manufactured gun-cotton has the peculiarity of being entirely free from the danger of spontaneous combustion, and it is constant and unalterable in its nature.

6. In driving tunnels through hard rock, a charge of gun-cotton of given *size* exerts double the explosive power of gun-powder, so as to render a smaller number of holes necessary.

7. Gnn-cotton also may be so used as, in its explosion, to reduce the rock to much smaller pieces than gun-powder, and so facilitate its removal.

8. As gun-cotton produces no smoke, tho work can proceed much more rapidly, and with less injury to the health of the miners.

9. In working coal mines the advantages of bringing down much larger quantities of material with a given charge, and the absence of smoke in the explosion, enahle a much larger quantity of work to he dono in a given time at a given cost.

10. The weight of gun-cotton required to produce a given effect in mining is only one-sixth part the weight of gun-powder. By the purchase of gun-cotton the miner economizes greatly in the cost of freight.

In regard to the relative power of gun-cotton and gun-powder, Mr. Scott Russell, in a recent address, said:

> The next application made during the past year was to the driving of tunnels, shafts and drifts, in connection with engineering applications. It was stated by the committee that one-sixth of the weight of the charge of cotton was equal in blasting effect to gunpowder, and this had been proved in practise in a number of instances. At Wingerworth colliery one-thirteenth of the weight of gun-cotton, as compared to gun-powder; in the slate quarries at Llanberis, at Allen-Heads, one-seventh was required. At Allen-Heads, at some lead mines, a canal was being driven seven miles long. The drift was seven feet by five in the hardest limestone. Both ends were worked by gun-cotton fired by an electric battery. The great advantage experienced was that the air was not contaminated by smoke, and that the work could be carried on more rapidly. The next application had been made to the detaching of large masses of rock. This had been tried in several places, and it was found that one pound of gun-cotton was able to detach from thirty to sixty tons of rock.

Now, then, we come to the experiments to test the valno of gun-cotton which have been made in our own State. After an investigation extending through tho period of two weeks, at the New Almaden Quicksilver Mines. Tho eminent mining engineer, C. E. Hawley, Esq., reports as follows:

> QUICKSILVER MINING COMPANY,
> NEW ALMADEN MINE, Cal., July 12, 1865.
>
> During the past fortnight we have been using at these mines the gun-cotton furnished by you. At first the experiments were made under my own supervision, and I can bear witness, from my own observation, to the value of this explosive agent in mining.
>
> The gangue rock of the Almaden vein is very hard magnesian lime-stone, in many places worth thirty dollars per foot (lineal) to work in ordinary drifts of six feet by five. In other parts of the mine the rock is partially decomposed and easy to work. To my surprise, the miners in soft rock are more desirous, than any others, of using gun-cotton.
>
> In the hard rock the cotton is fully as effective as the ordinary blasting powder, with the material advantage over the latter of breaking the rock into smaller fragments. This would be an economy to us, both in handling in the mine and in cleaning the ore upon the plantilla.
>
> Its strength, when compared with an equal weight of gun-powder, appears to be much greater than the latter.
>
> But the most valuable quality it possesses for our use is its freedom from smoke. This vein is extremely irregular, and its workings of great extent. Good ventilation cannot be maintained everywhere, and some of the richest "lahores" in the mines are now seriously delayed by the smoke of blasting powder. The perfect freedom from smoke, of the gun cotton, would warrant us in using a limited quantity at considerable greater cost than blasting powder.
>
> I have looked carefully for evidence of danger in tamping, and have had it tested by various means, but so far as my limited experience of it goes, it is quite as safe as powder.
>
> A longer acquaintance with it will probably develop new features which I do not now see. A brief experience has much surprised and pleased me.
>
> I return to you herewith the two pamphlets upon gun-cotton which you loaned me. When you receive others, will you be so kind as to let me have one of each? Also, permit me to suggest the advantage of making the gun-cotton better known in the mines of the Eastern States. If you can forward pamphlets to Mr. Thomas Phillips, Scranton, Luzerne county, Pa., and to Hon. H. B. Wright, Wilkes-Barre, Pa., these gentlemen being engaged in the most extensive coal operations of the United States, would probably be benefitted themselves and influential in behalf of your trade.
>
> I send an order to-day, etc.
>
> Yours, truly,
> C. E. HAWLEY,
> Mining Engineer.

In the county of Nevada the material was tested in the hard rock of the famous quartz mines of that region. The Superintendent of the New York Company reports:

> NEVADA CITY, Cal., July 24, 1865.
>
> I take pleasure in stating to you that the experiment in the Sneath & Clay mine, of gun-cotton for blasting, was a perfect success. The charge ignited quickly, exploded clearly, and broke the rock fully as much as a larger charge of powder could have done. There was no smoke attending the discharge.
>
> Dry or wet blasting, I think it is superior to powder, and can be used with more safety.
>
> Yours, truly, STEPHEN P. LEEDS,
> Superintendent N. Y. & G. V. M. Co.

And Captain G. W. Kidd, who is well known everywhere to Californians, writes:

> NEVADA CITY, August 1, 1865.
>
> We have tried the gun-cotton charges you left with our superintendent of the mine, and find the gun-cotton gives entire satisfaction. It certainly is preferable to powder in a mine. All we regret is, you have not yet a supply for us.
>
> We are, yours, truly,
> S. S. B. G. & S. M. CO.
> Per GEO. W. KIDD, Sup't,

Further, the gun-cotton has been introduced to the copper miners of Calaveras, and they add their testimony of the valuc of the material. The superintendent of the "Napoleon" says:

> NAPOLEON MINE, June 16, 1865.
>
> I have, by your request, made a trial of Baron Lenk's gun-cotton. The result has been very flattering. Of its power, execution, economy and safety, there can be no donht. It makes (in blasting) but *very* little smoke, being a great advantage in a mine.*
>
> Very respectfully, yours, etc.,
> JOHN A. STEINBERGER,
> Superintendent Napoleon Mine.

And Mr. Miller, of the Live Oak, certifies:

> PHILADELPHIA & PACIFIC COPPER MINING CO., Live Oak Mine.
>
> I have, at your request, made a trial of the Lenk gun-cotton. The result has been a thorough proof of its value. It makes no smoke, is of full power, and possesses every quality required for blasting purposes.
>
> JAMES MILLER,
> Captain of Mine.

The gun-cotton has been tried under the superintendence of Gen. Van Bokkelen, in the Alamance tunnel, Virginia City, with the same successful results. Tho Virginia *Union*, in an editorial on the subject, predicts that gun-cotton will eventually he in universal use for mining.

Before we close this satisfactory testimony to the value of gun-cotton, we may properly add that the shipment which has thus been tested, came *via* Cape Horn, and the captain of the vessel in which it was brought, speaks thus of the comparative safety of gun-cotton as freight:

> SAN FRANCISCO, March 10, 1865.
>
> In reply to your enquiries as to gun-cotton, I have to say, that I should prefer to carry said article as freight (packed and boxed as the two cases shipped from London, per Bnn. bark "Hermine," under my command, were) than gun powder packed in the ordinary manner, i. e., wooden kegs.
>
> very respectfully, yours, T. H. BERRY,
> Master of the Bark "Hermine."

We might pnblish other testimonials, hut as the foregoing seem to cover the whole question, we will close hy saying that any further information which may he required, will be furnished hy Rockwell, Coye & Co., merchants, the sole agents for tho sale of the gun-cotton.

*The "little smoke" observed was made by the combustion of the fuse.

GENIUS AND LABOR.—Alexander Hamilton once said to nn intimnte friend:—Men give me some credit for genius. All the genius that I have lies just in this: When I have a subject in hnud, I study it profoundly. Day and night it is before me. I explore it in all its hearings. My mind becomes pervnded with it. Then the effort which I make is what the people arc pleased to cnll the fruits of genius. It is the fruits of labor and thought."

THE NICHOLSON PAVEMENT.—Measures are in progress which will probably resnlt in having nearly the entire length of Montgomery street laid down with the new Nicholsou pavement. The recent test of a section of this pavement in having thirty-five tons' weight pass over it on four wheels, without producing the lenst disturbing effect, while the cobble stones were repeatedly crnshed down so as to require the nid of n jack-screw to get the wheels out, appears to have pretty effectually settled the strength and endurance of this pavement.

CANNON AT RICHMOND.—Government is rnpidly dismantling the fortifications at Richmond and Petersburg, and shipping the cannon, etc., to the Washington and other Northern nnvy-yards and arsenals. The number of cannon of all kinds, siege and field, is much larger than was originally snpposed. At Petersburg, just hefore its evacuation, many cannon were buried and head-boards put up nt each end, to resemble soldiers' graves. The negroes, always loyal to the North, immediately revealed the trick, and upwards of one-hundred field-pieces have already been exhumed. The nmount of war material now necumulnted hy government, both of its own manufacture nnd captured from the rebels, is almost incredible.

THE profits of quicksilver mining may he inferred from the stntement, which appears to be rcliable, that the New Almaden mine is now prodncing fivo thousand flasks of quicksilver per month, worth forty dollars per flask, or two hundred thousand dollars per month, while the cost of production is set down at not far from fifty thousnnd dollars the five thousand flasks, leaving the magnificent profit of one hnndred nnd fifty thonsand dollars per month.

NOW WORKING.—From a private letter received in this city by the Del Norte, on Wednesday, we learn that work is heing actively pushed on the Paragon Compnny's claims, adjoining the Union Mattole Company, in Humholdt county. The Superintendent, Mr. T. G. Duff, expresses stronger faith than ever that an equal, if not better, showing of oil will be made within sixty days in the Paragon well than has yet been developed in the district.

CALIFORNIA ANNUAL FAIRS.—The Fifth Industrial Fair of the Mechanics' Institnte commenced on the 10th instnnt, and will probably continne ahout four weeks.

The State Fair at Sacramento will open on Monday, the 11th of Septemher, nnd continue through the week.

The Snn Jonquin District Fair, at Stockton, commences September 26th, and will continue five days.

The Fifth Annunl Fair of the Contra Costa Agricultural Society, commences on the 19th of Septemher, and continnes four days.

The Northern District Agricultural Society meets nt Marysville, August 28th, and continues five days.

THE French Academy of scienccs is [this year to designate, in accordance with the decree of the 22d of Novemher, 1860, the work of discovery of the greatest importance meriting the hiennial prize of 20,000 francs, founded by the Emperor.

BURSTING OF A RETORT.—On Tuesdny of last week, says the Nevnda *Transcript*, while Jos Cook was retorting ahout two thousand dollnrs worth of amalgam in n hlacksmith shop, the pipe hecame choked, the retort hnrsted, and the amalgam flew ahout the shop. Mr. Cook was slightly injured. The amalgam was a clean-up from ten days' washing in the Gold Bluff Company's ground on Mnzanita Hill, just below San Juan.

DIVIDENDS.—The Petaluma Mill and Mining Company, nnd the Imperial Silver Mining Company, each declared, on the 5th inst., a dividend—the former of five per cent., or five dollars per share, and the latter of ten dollars per share on the capital stock.

From the Daily Fair Press.

THE MECHANICS' INSTITUTE OF SAN FRANCISCO.

Never, since first the Star of Empire westward took its way, has there been devised any plan of association which has accomplished so much for the advancement of civilization and material progress, as that which is now so generally employed to bring together for mutual aid, assistance and improvement, the mechanics and working people of our land. The "Mechanics' Institute" is now an organization which is to be found, under that or some similar name, in almost every important city throughout the Union. The sons of Vulcan, of Archimides, of Fulton, of Arkwright, of Faust, and of Raphael, have, in these latter days, done more honor to themselves and their respective heads, in the quiet walks of peace, than have ever the followers of the proudest emperors or titled lords in all the grandest wars which history can produce. The footprints in the history of civilization and progress, which have been made within the present century, by the genius and handiwork of our artificers in wood, iron and brass, will tell more in coming events than all the great marches and brilliant victories which have been made and won since man first raised his hand against his fellow-man. Who, since the close of the late terrible strife of luxurious ease against honest toil, which has so recently drenched our own land in blood, is so base as to look with scorn upon the laborer or the mechanic? "What do we know of the infinite Creator, than that he is an infinite mechanic?" When are men most god-like, except when most active, and creating rather than destroying? Let, then, the practical mechanic bear ever in mind that no more ennobling activity can be his, than assiduous, intelligent efforts to convert the inanimate elements of nature into servants for himself and his fellow-men. "Thus," to use the language of another, "he will become a more valuable workman, and rising in the scale of intelligence, he may set up a model of practice which may stimulate to farther and higher improvements. Following up the sleepless principle of his nature, he stamps upon his art the impress of his intellect, and takes his place as a benefactor of his race."

We have been led into these reflections by considering the origin and history of the institution under whose auspices we are now assembled in this spacious temple of Art and Industry—this magnificent casket, containing such a vast collection of the gems of human thought, so curiously wrought into these multidiuudinous forms of power, utility and beauty—forms of far more real value than all the diamonds and rubies and pearls ever produced by Orient and Occident combined.

The "Mechanics' Institute" of the city of San Francisco, was organized on the 29th day of March, 1855. The first annual report, made on the 5th day of March, 1855, showed—

Total receipts for the year	$1,106 86
The disbursements were	1,085 37
Leaving in the treasury	$21 49

The number of members then enrolled were 282, only 92 of whom had paid their quarterly dues. The Library contained only 487 volumes.

The second annual report, made February 4th, 1857, showed—

Total receipts for the year	$2,448 98
Disbursements for the year	2,121 50
Leaving a balance of	323 48

The Library had increased to 887 volumes. In May of that year, it was decided to give the first Exhibition of the Institute, the opening of which was set for the 7th of September. After vain efforts to find a suitable structure in which to hold the Exhibition, it was decided to erect a temporary one for the purpose. The free use of a lot was generously tendered by Mr. James Lick—the same on which the Lick House now stands.

The proceeds of that exhibition are given as follows:

Total receipts from all sources	$22,347 63
Total expenses	19,469 20
Leaving a net balance of	$ 2,878 43

The building in that case, as in the present, was allowed to stand until another year. The affairs of the Institute, at that time, were in a very favorable condition.

The second exhibition was opened in the same building September 1st, 1858, and continued fifteen days.

The receipts of the Exhibition were	$15,511 50
Expenses	13,569 43
Net balance	$ 1,972 07

The list of membership at this time had increased to 452. From this time the records of the Institute present nothing of special interest, until the summer of 1860, when a proposition was made and carried to give a third Exhibition, for which a second structure was finally erected on the same ground as the first.

The cost of this building was $8,450. The Exhibition was opened September 3d, 1860, and, notwithstanding the hopes of success which attended the opening, and the creditable display of skill and industry, the Exhibition nevertheless resulted in a financial failure—the receipts falling some $3,000 short of expenses. From this time to the winter of 1863 may be looked upon as the dark days of the Institute. About that time, a large number of our leading and influential citizens, having determined that such a laudable institution should not be suffered to decline, took hold of its affairs with an earnestness with which we are all familiar, and the result of their labors was the erection of the noble edifice which still stands.

The fourth Exhibition of the Institute was opened on Saturday evening, September 3d, 1864. By the report of the executive committee, it appears that the cost of the present structure was $21,986.46.

Total receipts from Exhibition	$42,579 55
Total expenses	38,737 64
Leaving a net balance in cash	2,841 91

The total number of double season tickets sold for the Exhibition was 2,491; single season tickets, 592; boys' season tickets, 78; single admission tickets, 45,134. Total amount of money received on account of tickets, $36,716. When the amount of rent received for the Pavilion during the past season is taken into account, and the use of the building for the present Exhibition, and the amount which must be realized from its final sale, after the close thereof, all added to the cash profit of $2,841.91, it will be apparent that the Exhibition of 1864 was a most splendid success, alike gratifying to the members of the Institute, and to our citizens generally. Quite a full history of the Institute, from its organization, was given in the Daily Fair Press of 1864, and also in the Mining and Scientific Press of September 10th of the same year.

The last annual election of the Institute, which took place on the 7th of March, 1865, resulted in the election of the following officers for the current year: Charles M. Plum, President; Josiah Moulton, Vice President; P. B. Dexter, Recording Secretary; C. S. Higgins, Corresponding Secretary; Edward Nunan, Treasurer; and A. A. Snyder, H. K. Cummings, W. W. Hanscom, James R Deane, David Dwyer, D. A. Macdonald, and J. W. Reay, Directors.

The entire board of officers acts as an Executive Committee for making the necessary arrangements to inaugurate and carry forward to its completion the Fifth Exhibition of the Institute, which is now in successful progress. Mr. Gardiner Elliott has been appointed Special Superintendent of the Exhibition.

The first installment of books ordered for the Library last winter, has recently arrived, and the second installment is expected on the next steamer, which will add something over 500 volumes to the Library. The Librarian has been directed to forward another order for 2,000 volumes, which will probably go forward on the next steamer.

The Profit of Petroleum.—The expense attending the production of petroleum is so trifling that the nation profits by it more than from any mining or railway operations. The income of $75,000,000 will not cost probably over $2.000,000 in expenses. Gold, silver and coal mining costs about sixty to seventy per cent. for working purposes. The petroleum product of the United States promises to rival in amount the whole cotton crop of the South.

OPENING OF THE FIFTH INDUSTRIAL EXHIBITION OF THE SAN FRANCISCO MECHANICS' INSTITUTE.

Notwithstanding the backwardness manifested by exhibitors in introducing their goods and machinery into the pavilion, the managers of the Institute have done as they expressly advertised they would do—opened promptly upon the day and hour fixed upon. The delay upon the part of exhibitors has been as annoying to the managers as to the public; as it was desirous on the part of all that the exhibition should be as full and complete as possible at the opening. Had the managers yielded to the wishes of many, as they did a year ago, and postponed the time of opening, it would have been doing injustice to those who were prompt, and a giving way to a mischievous habit of procrastination, which is quite too prevalent in every community. The public, though disappointed in finding the Exhibition so incomplete at the opening, will doubtless fully approve of the promptness of the Executive Committee, and find the amplest satisfaction in the really fine display which will be made when everything is fully complete.

THE OPENING ADDRESS.

A large audience assembled at Platt's Hall on Wednesday evening last, to listen to the opening address, from the Hon. Frank M. Pixley. This address will be found entire in our columns to-day. It is quite lengthy, but not more so than demanded by the subject and the occasion. It is eminently practical in character, and like all the efforts of Mr. Pixley, is one which comes fully up to public expectation.

THE OPENING OF THE PAVILION

Took place on Thursday evening, and was preceded by a very fine display of fire-works, after which a large crowd soon collected under the rotunda, and in front the statue of Lincoln, which, after a brief address from Judge E. D. Sawyer, was for the first time uncovered to the public gaze. This statue, somewhat larger than life, stands upon a pedestal springing from the center of the fountain, and raised some ten feet above the level of the floor. The attendance was quite large, and from the beginning thus made, the managers feel very sanguine of a successful and useful Exhibition. The crowded state of our columns to-day prevents any extended notice, either general or in particular, of the articles on exhibition. We shall endeavor to do justice to all as the Exhibition progresses.

THE UNION MATTOLE OIL WELL.

We have taken pains to thoroughly inform ourselves with regard to the recent operations and actual *status* of this well, at last accounts from Humboldt. The following facts can be relied on: On the 31st of July commenced to clear out the well of saud, etc., which done, it was sunk five feet deeper, making 130 feet in all, and tubed to within seventeen feet of the bottom. By some mistake in making up the order for tubing in this city, it was found on arrival there that it was twenty-two feet short of the order, and lacked seventeen feet of reaching the bottom of the shaft. The pump was then put in, but soon got out of order. On taking the pump out to examine, the valves were found to have been made of gutta percha, which had become partially dissolved by the action of the oil—a result which might have been expected. Brass valves were substituted, the pump again started, and the well soon exhausted of oil; immediately after which there came a rush upwards of oil and gas, forcing up the pump valves, and throwing the oil several feet above the top of the well! This continued for a few minutes only, when it subsided, leaving the well full of oil. The flow was estimated at the rate of thirty barrels of oil per hour for the time it lasted. The well was again pumped out the next day (August 4th), with a repetition of the same rush. This was repeated on the 5th and 6th instants, when it was found that the flow of oil carried so much sand that the pump would not work, and operations were suspended until more tubing could be received, which will go up on the next trip of the Del Norte. In the meantime some twenty-five or thirty barrels of oil will arrive in this city by a sailing vessel. The question of a flowing well within 200 feet is now considered a matter almost beyond a doubt.

Letters from Mr. Duff, superintendent of the Paragon company, adjoining the Union Mattole, report the arrival on the ground, on the 3d of August, of all the tools, etc. The house and blacksmith shop was up, and the shaft was being put down, preparatory to the commencement of boring operations. The drill will be at work on or before the 15th instant. The success which has attended the Union, is looked upon as a guarantee for that of the Paragon.

At the low price of $1.25 per Acre. Terms; Twenty per cent in cash and the balance on a credit of several years.
7v9-tf Office, 328 Montgomery street.

MEMORY OF THE DEAD.—It is an exquisite and beautiful thing in our nature, that when the heart is touched and softened by some tranquil happiness of affectionate feeling, the memory of the dead comes over it most powerfully and irresistibly. It would seem almost as though our better thoughts and sympathies were charms, in virtue of which the soul is enabled to hold some vague and mysterious intercourse with the spirits of those whom we loved in life. Alas! how often and how long may these patient angels hover around us, watching for the spell which is so soon forgotten.

WHILE some of the oil enthusiasts were prospecting for petroleum in Venango county, Pa., they discovered the foundation of a house which must have been built there years ago by the French. Over the walls stood the stump of a chestnut tree, two feet in diameter. Near the house was a kettle cut of solid rock, which evidently had been used for smelting metals, either lead or silver, which is supposed to abound in that neighborhood.

THE South is now moving to the West, the North and East to the South. It is expected that the population will get mixed up, after a while; the farming population, we mean.

SANTA CLARA COLLEGE, S. J.,

SANTA CLARA, CAL.

Conducted by the Fathers of the Society of Jesus.

The FIFTEENTH ANNUAL SESSION of this College will commence on

Monday, August 28th, 1865.

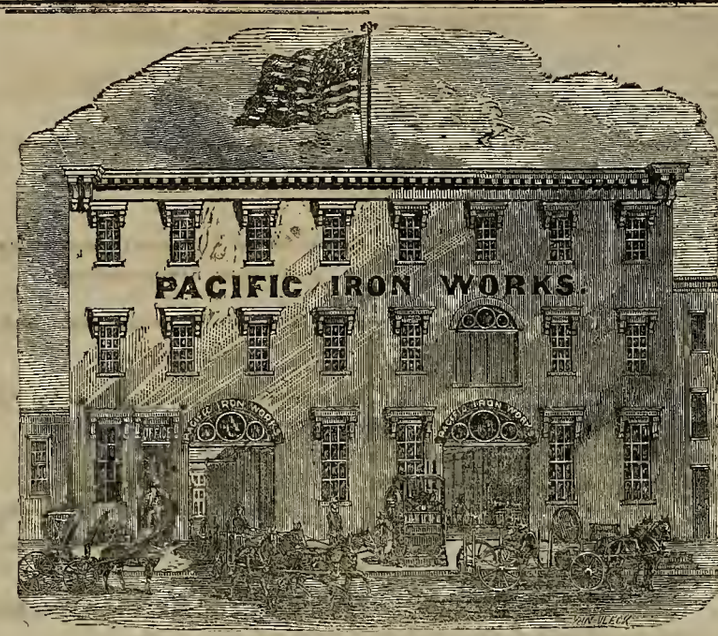
1st Premium, for Hygienic Bitters....1864

Awarded to

V. SQUARZA.



THE PACIFIC IRON WORKS,

First & Fremont Sts., between Mission & Howard, San Francisco.

The proprietors of the above Works invite the attention of all parties interested to their greatly improved and unequaled facilities for manufacturing Steam Engines and Boilers, both Marine and Stationary, of any required size and pattern, Quartz Mills, Amalgamating, Pumping and Hoisting machinery of the most approved construction, Flour, Saw and Sugar Mills, Water Wheels, &c., &c. Our pattern list is most complete and extensive, embracing the late improvements in all classes of machinery adapted to use on this coast. We would call especial attention to the fact that we have secured the exclusive right of manufacture for the Pacific Coast of the celebrated Greene Engine, conceded to be the most economical and perfect working Engine now in use. We are also exclusive manufacturers of the celebrated

Bryan Battery, Varney's Amalgamators and Separators, Ryerson's Superheated Steam Amalgamators and Rotary Crushers, Stone Breakers, &c. Orders respectfully solicited.

GODDARD & COMPANY.

Machinists and Foundries.

EARNESTNESS.—The man of life-long experience, and the little child—the man of cultivated intellect and the ignorant savage—can alike appreciate the earnest man. Some three years ago, three American missionaries were sent out to labor among a certain tribe of Indians. After hearing the first of the three, a council was called to decide whether the Great Spirit spoke to them through that man. They unanimously decided that He did not, because the man was less engaged in the delivery of his message than they were in their ordinary concerns. The second missionary addressed them in a very vehement manner, and the council decided that the Great Spirit could not have spoken through him because he was mad. The manner of the third was earnest and fervent. The council agreed that the Great Spirit might speak through him, because he was both earnest and affectionate, and he was therefore warmly received and kindly treated.

MINING LAWS AND FORMS.

NOTICE TO MINERS.

THE UNDERSIGNED WILL SELL

MINING STOCK

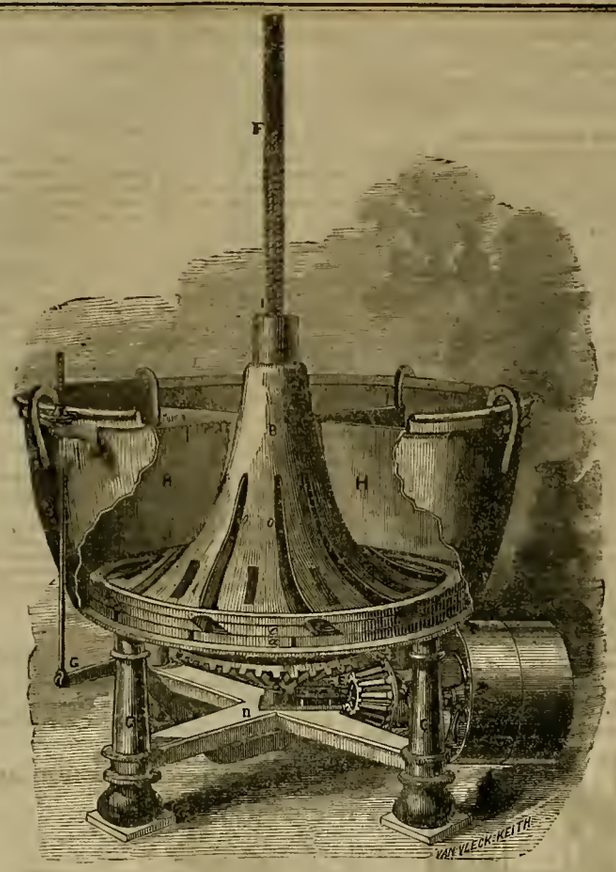
In Incorporated Companies and Unincorporated Mines, in San Francisco District and in El Dorado District, Arizona Territory. It is confidently asserted and believed by most practical miners that Arizona is the richest mining country in the world. Recent developments of these mines are now attracting the attention of capitalists, who have already erected several mills, and more are going there soon. Now is the time to invest to advantage, and obtain the rise that must soon follow. Those wishing to purchase soon can do so, on most liberal terms, by calling on MR. RODNEY CLARK, 338 Montgomery street (room No. 11), San Francisco, or on H. C. SKINNER, San Jose, California.

N. B.—Freight all the way by water at a cost of 4½ cents per pound.

H. C. SKINNER,

San Francisco, April 27, 1865. San Jose, California. 17q10

Postponements and Alterations.—Secretaries are requested to give notice of postponements, or alterations which they may desire made in their advertisements at their earliest convenience. New advertisements should be sent in as early as possible.



THE EXCELSIOR

GRINDER AND AMALGAMATOR.

In the engraving herewith presented, A represents the Rim of the Pan; B, Muller; C, Legs; D, Cross-Frame; E, Gearing; F, Screw; G, Lever; H, Dash-Boards; I, Key; *a*, Dies; *c*, Shoes, and *o*, Openings.

The relative grinding capacities of "The Excelsior" Grinder and Amalgamator, of the Flat Bottomed Pan, and of the Conical Pan *when properly constructed*, are respectively 177, 98 and 110.

That is, the respective mullers being of the same diameter, same weight, same hardness, and running at the same velocity, "The Excelsior Grinder and Amalgamator" will reduce one hundred and seventy-seven tons of ore, the Flat Bottomed Pan ninety-eight tons, and the Conical Pan one hundred and ten tons to the same degree of fineness in the same time.

The wear to the Shoes and Dies at their grinding surfaces in the Excelsior Grinder and Amalgamator, is perfectly uniform, thus securing evenness of reduction to the pulp, as well as steadiness of motion to the muller. Uniform wear of the grinding plates has been attained in no other than that of the Tractory form—nor can it be.

Another property of excellence in this machine is that the metal or substance to be amalgamated passes *direct* from the grinding surfaces into the quicksilver; thus excluding the possibility of its becoming coated with any foreign substances, after having been burnished. It is truthfully said "that the Tractory-formed Pan as a Grinder has no equal, and as an Amalgamator no superior."

As a whole, it is far superior to any other pan in use.

MANUFACTURED AT THE

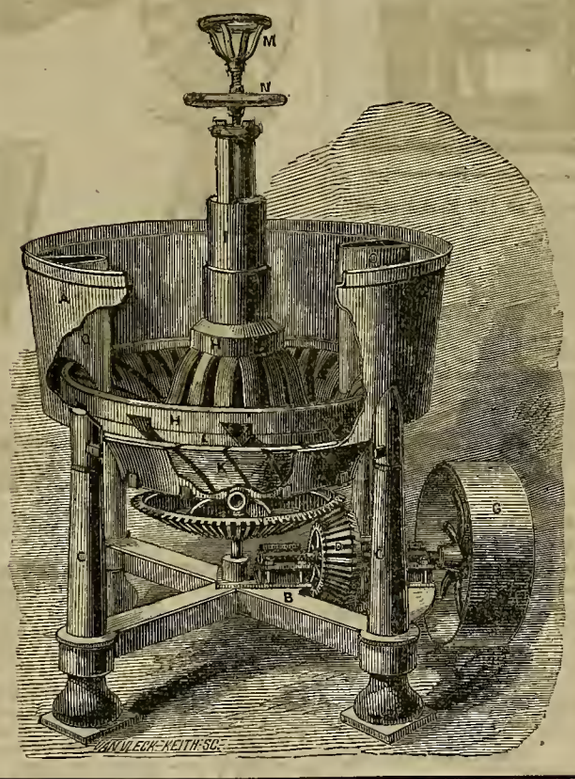
Union Iron Works and Golden State Iron Works,

WHEELER & RANDALL, Inventors.

The undersigned having had several years of experience in practical quartz mining operations, will ever take great pleasure in furnishing parties interested in mining and machinery any desired information which they may possess.

WHEELER & RANDALL.

SAN FRANCISCO, June 13, 1865.



THE

WHEELER & RANDALL

Grinder and Amalgamator.

In the engraving herewith exhibited, A represents the Rim of the Pan; B, Cross Frame; C, Legs; D, Gear; G, Driving Pulley; H, Muller; I, Driver; K, Dies; L, Shoes; M, Hand Wheel; N, Jam Nut, and O, Wings or Guide Plates.

The attention of the Public is respectfully called to these facts:

1st. That the Mechanical work accomplished by differently formed grinding plates, having the same diameter, weight, hardness, and revolving at the same velocity, is as follows, to wit:

The Mechanical Work of plane, circular plates of the usual ring form, is ninety-eight.....98

The Mechanical work of conical plates of the most approved form, is one hundred and ten.....110

The Mechanical work of Tractory-formed plates, as introduced in the invention of Wheeler & Randall, is one hundred and seventy-seven.....177

That is, the Tractory-formed grinding plates will reduce one hundred and seventy-seven tons of ore, the conical grinding plates one hundred and ten tons, and the plane circular grinding plates ninety-eight tons, to the same degree of fineness in the same time. Those using this invention certify that they thoroughly reduce five tons of ore, as it ordinarily comes from the wet battery, per day in each pan, four feet diameter, the muller making sixty-five revolutions per minute.

2d. That as a whole, the Wheeler & Randall Grinder and Amalgamator is one of the most simple, compact, substantial, convenient and efficient pans in use.

S. F. BUTTERWORTH,

Northwest cor. Battery and California sts.

v9-19 SAN FRANCISCO.

SAVE YOUR BOILERS AND FUEL.

ONE-EIGHTH OF AN INCH OF DEPOSIT ON THE fire surface of a boiler takes THIRTY PER CENT. of the steam generating power from that boiler, and, of course, wastes thirty per cent. of the fuel; and, what is a greater misfortune, it keeps the water from the plates and flues, causing them to scorch, blister and burn, destroying the boiler, and too often human lives.

I Have a Compound For Sale

That I have used with complete success in every instance, and without delaying the running of machinery, or injuring the boilers in any manner, and at a cost of five dollars the boilers can be made as clean as when they were new.

ATTENTION, MINERS!

LINSCOTT'S PATENT

CHAMBER DRILL.

Great Improving in Blasting.

W. B. LAKE

Has taken the sole agency for the manufacture and sale upon the Pacific Coast of this valuable article, the object of which is to cut a chamber at the bottom of an ordinary drill-hole (as will be understood on reference to explanation of cut), giving more than double the effect in blasting.

D is the shaft of drill, forty-five inches in length. B represents the cutters extended after a blow has been given. The lower portion of B is a guide plate ¼ inch thick, holding the cutters in place and allowing them to glide in and out freely, the surface of the rock preventing their falling out and securing their return. When closed the edges of the cutters protrude about 1.16 inch only. As the drill descends the force slide A strikes the bottom of the hole and a slight blow drives its wedged shaped head, C, upward, forcing the cutters upward and outward by double acting wedge power. Face of the cutters 1¾ inches in length, diamond edged. There are but four pieces in all, two of which, the cutters, are detached.

Price of one drill with two sets of cutters, $35. Extra cutters, $5 per set.

Persons wishing further information about the working of this labor and money saving article, will please send for circulars containing full particulars, which will be furnished gratuitously upon addressing W. B. LAKE, General Purchasing and Advertising Agent, Room 28 Government House, San Francisco. 2v11

HANSCOM'S CRUSHERS,

Made in sizes suitable for Breaking Quartz for Batteries; Rock for macadamizing or concrete; Copper Ore for sacking, sampling, or concentrating; also, for crushing Quartz for Arastras and Grinders. The small sizes make a most efficient Crusher for Prospectors, and are arranged to be run by Hand, Horse, Water or Steam Power. For further information address W. W. HANSCOM.

1 Golden State Iron Works, San Francisco.

Hepburn & Peterson's

AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

☞ This Amalgamator may be seen in operation at the European Metallurgical Works, Bryant St. bet. 3d and 4th.

[Illustrated in the Mining and Scientific Press, April 9th, 864.] HEPBURN & PETERSON.

nov8 3m*

NOTICE TO MINERS.

NEW QUARTZ MILL.

THE ATTENTION OF ALL ENGAGED IN MINING IS called to Fauchery's unrivaled Mining Machines, consisting of his celebrated Turbine Water Wheel, which took the First Premium at the Mechanics' Fair at San Francisco for 1864; his Crocodile Quartz Crusher; his Pulverizer; and his Improved Perforated Amalgamating Barrel; altogether forming the most complete and effective Quartz Reducing and Amalgamating Mill now in use. This mill can be put up at less cost, run with less power, and accomplish more work, than any other now in use.

B. Fauchery and F. Genard

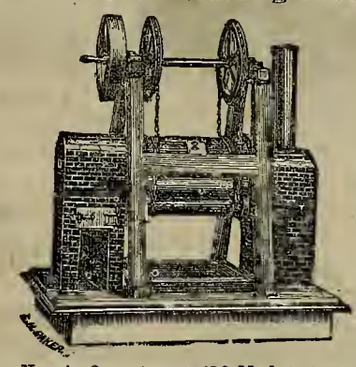
Having established a Quartz Mill and Metallurgical Works, are now prepared to crush, roast amalgamate, assort, cupelate, and give correct analysis of ores. We are also prepared to give our attention to the building and constructing of Quartz Mills and Furnaces, and give directions for working Mines; and also to instruct persons in all branches appertaining to Mining Works, at No. 23 Fremont street, near Market, Railroad Foundry building.

F. GENARD, Metallurgist. B. FAUCHERY, Engineer,

24v9

WM. BRUCKNER'S

Furnace for Roasting Ores.



Now in Operation at 416 Market street.

This Furnace, which is portable, and can be carried on mulcback, undertakes to roast without employing any labor whatever for the operation of stirring, which is accomplished by machinery that may be driven by steam or any other motor. It consists of an iron cylinder, which, being suspended by chains, in rotating mixes and stirs the ore, by an internal apparatus, quicker and more perfectly than can be done in any other furnace hitherto known in metallurgy. It can be applied to any kind of ore, and the rapidity and perfectedness of its operation, the great saving in fuel, and the entire saving of the labor usually required for stirring the ore, together with the small cost of constructing it, renders this furnace a most

Economical and Practical Invention.

The Furnace may be had of two sizes—one being nine feet in length and holding fourteen hundred pounds, and the other six feet in length, and holding eight hundred pounds. One horse power is required to drive the machinery of the larger sized furnace, and three-fourths of a horse-power for the smaller size. Parties wishing to erect such furnaces will please communicate to

W. BRUCKNER,

5v10 No. 416 Market street, San Francisco.

BLAKE'S

QUARTZ BREAKER

Is now extensively used for breaking hard masses of

Quartz or Ores

To a size suitable for stamps. These machines are patented, and are in practical operation in

CALIFORNIA, AUSTRALIA, WASHOE, ENGLAND, FRANCE,

—AND—

THE ATLANTIC STATES.

These Machines, or circulars containing further information regarding them, may be obtained of the undersigned.

Address,

BLAKE & TYLER,

Box 2077 San Francisco Post Office.

CHAS. T. BLAKE, Idaho City. E. TYLER, Michigan Bluff. WM. P. BLAKE, San Francisco.

4v10

VARNEY'S

PATENT AMALGAMATOR.

These Machines Stand Unrivaled.

For rapidly pulverizing and amalgamating ores, they have no equal. No effort has been, or will be, spared to have them constructed in the most perfect manner, and of the great number now in operation not one has ever required repairs. The constant and increasing demand for them is sufficient evidence of their merits.

They are constructed so as to apply steam directly into the pulp, or with steam bottoms, as desired.

This Amalgamator Operates as Follows:

The pan being filled, the motion of the muller forces the pulp to the center, where it is drawn down through the aperture and between the grinding surfaces. Thence it is thrown to the periphery into the quicksilver. The curved plates again draw it to the center, where it passes down, and to the circumference as before. Thus it is constantly passing in a regular flow between the grinding surfaces and into the quicksilver, until the ore is reduced to an impalpable powder, and the metal amalgamated.

Setlers made on the same principle excel all others.—They bring the pulp so constantly and perfectly in contact with quicksilver, that the particles are rapidly and completely absorbed.

Mill men are invited to examine these pans and setlers for themselves, at the

PACIFIC FOUNDRY,

1v10 San Francisco.

THE HAMMER QUARTZ MILL.

[PATENT APPLIED FOR.]

This Machine is now complete and ready for sale. In constructing it, our aim has been to produce a light, cheap and economical Crusher—one adapted to mining on a small as well as on a large scale.

The elementary principle on which it operates is that of the stamp—the only one really reliable and economical.

But the stamp has many serious disadvantages, among which are its great weight and small velocity; the great power required to run it; difficulty in feeding properly; imperfect discharge, and the necessity of crushing wet, or the annoyance from dust in crushing dry.

All these difficulties are obviated in our machine, and the percussive blow of the stamp retained, with the further advantage of its being a drawing or grinding one.

We give to our hammers such absolute or relative weight and velocity as we choose—just such as to effect their purpose and no more—thus securing the qualities of the natural hammer blow.

The feed is self-adjusting and uniform, and as fast as the ore reaches the required degree of fineness (which depends upon the fineness of the screen or sieve used), it is instantly discharged, so that there is no packing of the ore under the hammers.

The mill crushes dry, with no more dust than that incident to feeding, which is trifling.

As the only support of the mortar is a single post set into the ground, the machine can be put in place at slight expense.

The size now being built weighs about 1,800 pounds complete; the heaviest piece not weighing over 275 pounds. It is driven by half a horse-power, and crushes from three to ten tons per day of twenty-four hours per day, according to the character of the rock and the fineness to which it is reduced.

PRICE,.....$800.

Larger ones will be furnished if desired.

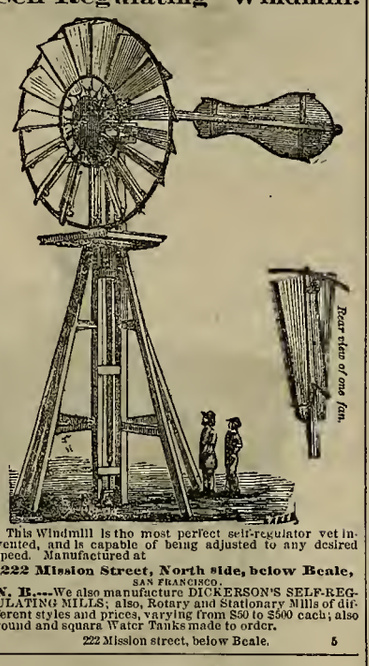
We invite an inspection of the Mill now in operation adjoining the Foundry of DEVOE, DINSMORE & CO., on Fremont street, between Market and Mission, San Francisco.

Office, No. 11 Court Block, San Francisco, Cal.

21v10 **RIX & LOGAN.**

ATWOOD'S

Self-Regulating Windmill.



Rear view of one fan.

This Windmill is the most perfect self-regulator yet invented, and is capable of being adjusted to any desired speed. Manufactured at

222 Mission Street, North side, below Beale,

SAN FRANCISCO.

N. B.—We also manufacture DICKERSON'S SELF-REGULATING MILLS; also, Rotary and Stationary Mills of different styles and prices, varying from $50 to $500 each; also round and square Water Tanks made to order.

222 Mission street, below Beale. 5

HUNT'S

IMPROVED WIND-MILL.

THIS WIND-MILL IS RAPIDLY taking the place of all other Mills on the Pacific Coast. These Mills are so simple in their construction, that when once built, they can be put in order by almost any person; and when once in order they will run for years without repairs.

Prices, from $50 to $1,000.

ROUND AND SQUARE WATER TANKS BUILT TO ORDER.

HUNT'S PUMPS

Are admitted to be the best in the Market for Wind Mills, being built expressly for that purpose. They can be set, and taken apart with a common wrench, and are very easily repaired.

HUNT'S ENDLESS CHAIN

HORSE POWER

For Sawing Wood,

ALSO, THE

Self-Regulating Horse Power

Is so arranged as to give a steady motion, and is calculated to be used for turning Wood, Iron or Brass, also for Scroll or Circular Sawing, and is fully equal to Steam for any light work. The above Machines are built of the best materials, and made as Durable as Wood and Iron will make them.

ALL WORK WARRANTED.

☞ For further Particulars see small circulars. ☜

E. O. HUNT,

No. 28 Second Street, and 108 & 112 Jessie Street, San Francisco. 26-3m

HUNT'S PATENT

Circular Sweep Horse-Powers,

For running Churns, Washing Machines, Grindstones, pumping water, sawing wood, and other light machinery. Price, $100, at the Factory.

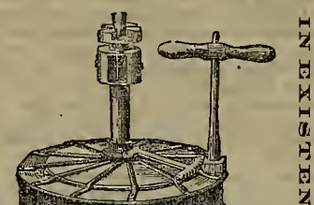
HUNT'S PATENT SELF-REGULATING TREAD HORSE-POWER is superior to any machine of the kind in the market. Price, with Governor, all complete to set to work, at the Factory, $300. Manufactured by

E. O. HUNT,

7v10 28 Second street, San Francisco.

Equal to the Best Overshot Wheel

POWER PLEDGED



IN EXISTENCE.

LEFFEL'S

AMERICAN DOUBLE TURBINE.

The DOUBLE TURBINES, so long expected, have arrived at last, and orders can now be filled. We have a large supply of the different sizes, from 20 inches to 30½. That we may know the proper sized Wheel you require, measure your water in the following way: Take the width of the stream, the average depth, and the distance it flows in a minute.

All the Wheels already in use give universal satisfaction. For particulars send for a Circular.

The above Wheel will be exhibited during the Fair of the Mechanics' Institute, where all may see it and hear its merits explained. This Wheel is especially adapted to mining purposes It is light, and can be easily packed into the mountains. Wheels weighing from 100 to 300 pounds will yield from 10 to 40 horse-power under a head of 25 or 30 feet. They are the cheapest wheel to set up known, as they are so arranged as to produce the greatest power possible from the water used.

Come and see them, or send for a Circular to

LEFFEL & MYERS,

4v11-tf Care RICHARDS & MCCROKEN, San Francisco.

TO QUARTZ MINERS.

Hinkle's Centrifugal Pulverizer and Amalgamator!

THE ATTENTION OF MINERS IS RESPECTFULLY requested to HINKLE'S CENTRIFUGAL PULVERIZER AND AMALGAMATOR, now manufactured and to be seen in operation at the NOVELTY IRON WORKS of Mr. E. T. Steen, Nos. 37 & 39 Fremont street, between Market and Mission streets.

This machine is the best in the State for the purpose of Pulverizing and Amalgamating ORES. The whole machine, made entirely of Iron, will not exceed One Ton, and no piece of it will exceed 200 pounds, which makes it very convenient for transportation to remote districts. It will work Two Tons of Rock per day.

Mr. Hanson, who is running one of the machines, is an experienced Amalgamator, and will receive Ores at the above named place, and extract the metals and furnish assays for all persons wishing the same. The Subscriber manufactures a HAND MACHINE for Miners engaged in prospecting, which will work 60 pounds of ROCK at a time, and which will weigh about 175 pounds.

The Pulverizer and Amalgamator works Rock of the size of a grain of corn to an impalpable powder. Apply to

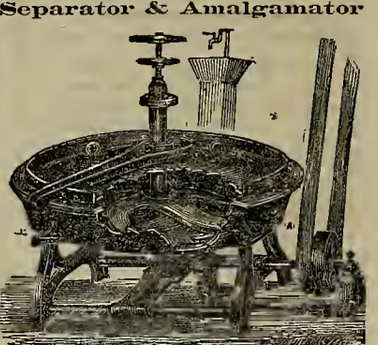
PHILIP HINKLE,

At the Novelty Iron Works, Nos. 37 & 39 Fremont street.

15-1m

BAUX & GUIOD'S

Separator & Amalgamator



Is the most important improvement in mining machinery ever introduced. It was awarded the FIRST PREMIUM at the San Francisco Mechanics' Fair for 1864, where it proved itself to be the best Separator and Amalgamator among all the competitors. Constructed on principles which combine SCIENTIFIC KNOWLEDGE WITH PRACTICAL EXPERIENCE, these Pans extract more gold and silver from their ores than any others in use, as a few hours trial will demonstrate. Mill men will find it to their advantage to employ these pans as Separators, in addition to the ordinary Amalgators now in use, and to re-work their old tailings.

The cost of these pans is inconsiderable, and their structure is such that they can be readily separated in parts convenient for packing on mules. Among the many advantages possessed by BAUX & GUIOD'S Pan, are the following: The trifling cost for attendance; Its small cost; Its portability; The large quantity of pulp it can operate upon in a given time; It may be worked even weeks without stopping, as it is constructed to work continuously; The complete thoroughness of the separation of the rock from the metals and the trifling power required to work them; They can be attached to any ordinary crushing apparatus.

Lapidaries' refuse, Refiners' ashes, Jewelers' sweepings, purchased or worked for a percentage. Ores and tailings worked or assayed at reasonable rates.

Manufactured at the Vulcan Iron Works, Miners' Foundry and San Francisco Foundry, San Francisco, and at Heugh & Thom's Foundry, Nevada City.

For further particulars, or to see this Pan in operation, call on or address

J. B. BAUX,

Fremont Street, near Mission, adjoining the San Francisco Iron Works, San Francisco. 4v8

Cabin passengers will be berthed for Atlantic steamer.

OLIVER ELDRIDGE, Agent.

Corner Sacramento and Leidesdorff sts.

"NOT A TREE IN SIGHT!"—There is much of human nature—much of what all have felt who have lived in grove-dotted lands—in the following story from the plains. An old gray-headed man, from the walnut-shaded streams of Iowa, was lying at the point of death in his wagon, which was then in the middle of what appeared a boundless desert. His friends felt it a duty to tell him that his end was near, that he might take leave of his family and arrange his affairs before Death, with icy clutch, seized upon him. The old man was told that he could not live through the day. "Lift me up, boys, and let me look out upon the country," said the patriarch. He was lifted up, and for a time his fast-glazing eyes were turned hither and thither, when he said: "Lay me down, boys; you must carry me on; I cannot die here; there is not a tree in sight!" The old man is yet alive, and is now "hale and hearty."

HOW RAPIDLY FISH CHANGE COLOR.—The change of color in fish is most remarkable, and takes place with great rapidity. Put a living trout from a black hurn into a white basin of water, and it becomes, within half an hour, of a light color. Keep the fish living in a white jar for some days, and it becomes absolutely white; hut put it then into a dark colored or black vessel, and although on first being placed there the white colored fish shows most conspicuously on the black ground, in a quarter of an hour it becomes as dark colored as the bottom of the jar, and consequently difficult to be seen. No doubt this facility of adapting its color to the bottom of the water in which it lives, is of the greatest service to the fish in protecting it from its numerous enemies. All anglers must have observed that in every stream the trout are very much the same color as the gravel or sand. Whether this change of color is a voluntary or involuntary act on the part of the fish, is a matter for scientific investigation and discussion.

WE have often formed the wish—and afterwards made a picture out of it—that we could he present at all the reconciliations in the world, because no love is so heautiful, or moves us so deeply, as returning love.

OIL WELL BORING.

J. SEVENOAKS,

Contractor

For Well Boring and Erecting all kinds of Machinery connected therewith.

Having had extensive experience in boring for oil in Penusylvania, Canada and elsewhere, I feel confident of being able to give entire satisfaction. Persons desirous of making contracts as above, or wishing information with regard to oil indications, etc., will please address me at the office of the "Mining and Scientific Press," San Francisco, or to my personal address, Santa Cruz, Cal. 2v11

"Say, why should man for thirst be given
If not for wine bestowed by Heaven
To quench such drought as mine?
Without it, I'm a fish on land,
A barren heap of parching sand—
Then give me joyous wine."—*Trinidad.*

Delicacy of flavor, exhilaration without intoxication, and every other desirable property belonging to the rightly fermented Juice of the Grape, are to be found in the "Gerke Wine," from the celebrated Bosquejo Vineyard, Tehama county.

There is no wine produced in California that can bear comparison with this, and it would be difficult to find a European wine, of the same class, that can surpass it.

The vintage of 1862 is now offered for sale, in quantities to suit, by the Agent of the vineyard,

A. S. LOWNDES,

Basement of the New York Hotel, southwest corner Battery and Commercial streets, San Francisco. 20v10-qy

Mosquito Quartz Mining Company, Calaveras County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 22d day of July, 1865, an assessment of five ($5) dollars per share (one dollar per foot), was levied upon the capital stock of said Company, payable on the 24th day of July, 1865, in United States gold coin, to the Secretary, at the office of the Company.

Any stock upon which said assessment shall remain unpaid on Saturday, the 26th day of August, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Friday, the 15th day of September, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

G. PARDOW, Secretary.

Office, 15 Montgomery Block, San Francisco. jy29

Napa Gold and Silver Mining Company, Silver Mountain District, Alpine county, California.

HELMBOLD'S

FLUID EXTRACT BUCHU

For Non-Retention or Incontinence of Urine, Inflammation or Ulceration of the Bladder or Kidneys, Diseases of the Prostrate Gland, Gravel, Brick Dust Deposits, Dropsical Swellings, Organic Weakness, Debility, Female Complaints, Etc.

H

HELMBOLD'S

FLUID EXTRACT BUCHU

—AND—

Improved Rose Wash

Will radically exterminate from the system Diseases arising from Habits of Dissipation, *at little expense, little or no change of diet, no inconvenience or exposure;* completely superseding those *unpleasant and dangerous remedies, Copaiba and Mercury,* in curing these diseases.

U

USE HEMBOLD'S

FLUID EXTRACT BUCHU

In all Diseases of the Urinary Organs, whether existing in MALE OR FEMALE, *from whatever cause originating, and no matter of how long standing.* It is pleasant in its taste and odor, IMMEDIATE in action, and more strengthening than any of the preparations of *Bark or Iron.*

Those suffering from *Broken Down or Delicate Constitutions, procure the Remedy at once.*

The reader must be aware that however slight may be the attack of the above diseases, it is certain to affect his *Bodily Health, Mental Powers and Happiness.* If no treatment is submitted to, Consumption or Insanity may ensue.

All the above diseases require the aid of a diuretic.

Hembold's Extract Buchu

IS THE GREAT DIURETIC.

L

HELMBOLD'S

HIGHLY CONCENTRATED

Compound Fluid Extract Sarsaparilla,

For purifying the Blood, removing all diseases arising from excess and imprudence in life, chronic constitutional diseases arising from an impure state of the blood, and the only reliable and effectual known remedy for the cure of Scrofula, Scald Head, Salt Rheum, Pains and Swelling of the Bones, Ulcerations of the Throat and Legs, Blotches, Pimples on the Face, Tetter, Erysipelas, and all scaly eruptions of the skin, and beautifying the COMPLEXION.

M

NOT A FEW

Of the worst disorders that afflict mankind arise from the corruption that accumulates in the Blood. Of all the discoveries that have been made to purge it out, none can equal in effect HELMBOLD'S CONCENTRATED EXTRACT OF SARSAPARILLA. It cleanses and renovates the Blood, instills the vigor of health into the system, and purges out the humors which make disease. It stimulates the healthy functions of the body, and expels the disorders that grow and rankle in the Blood. Such a remedy, that could be relied on, has long been sought for, and now, for the first time, the public have one on which they can depend. Our space here does not admit of certificates to show its effects, but the trial of a single bottle will show to the sick that it has virtues surpassing anything they have ever taken.

B

Two tablespoonsful of the Extract of Sarsaparilla, added to a pint of water, is equal to the Lisbon Diet Drink, and one bottle is equal to a gallon of the Syrup of Sarsaparilla, or the decoction as usually made.

The above Extracts are prepared on purely scientific principles—in *Vacuo*—and embody the full strength of the ingredients entering into their composition. A ready and conclusive test will be a comparison of their properties with those set forth in the U. S. Dispensatory.

O

HOW TO USE THE REMEDIES.

In Diseases of the Blood, Humors on the Face, or any and every part of the body, use Extract of Sarsaparilla, applying to Pimples and all external Humors or Eruptions the Improved Rose Wash.

Use the Extract Buchu for all diseases requiring the aid of a diuretic, except those of the Urinary Organs, such as Gonorrhœa and Gleet; in these use the Extract Buchu, and inject with the Improved Rose Wash.

L

☞ THESE EXTRACTS HAVE BEEN ADMITTED TO USE IN THE UNITED STATES ARMY, and also are in very general use in all the STATE HOSPITALS AND PUBLIC INSTITUTIONS throughout the land, as well as in private practice, and are considered as invaluable remedies.

EUROPEAN METALLURGICAL WORKS,

—AND—

Practical Mining School,

Bryant Street, Between Third and Fourth,

SAN FRANCISCO.

THE Proprietors are at all times prepared to work or test Ores sent to this establishment—either in large or small quantities—by such process as may be found best adapted to their chemical character, after a careful analysis has been made. Test lots of Ore adapted to the smelting process attended to. Sulphuret, pyritous, and the (so-called) "rebellious ores," are having especial attention paid to their successful treatment. Assaying in the humid and dry way. Also, refining by cupellation, done at moderate rates.

PRACTICAL MINING SCHOOL.

The proprietors—encouraged by numerous applications from gentlemen desirous of pursuing the study of practical metallurgy—have concluded to admit parties on reasonable terms. Having in their Mill all the necessary appliances for crushing, roasting, amalgamating, smelting, refining and assaying, as also a well extended Laboratory for the analysis of Ores and Minerals, a good opportunity is here offered to acquire a sound practical knowledge of the business.

S. P. KIMBALL, J. R. MURPHY.

ASSAYERS

Desirous to commence an ASSAY OFFICE in the mines may buy, at a very low figure, in a prosperous mining county, a complete set of Assaying Apparatus, Scales, Chemicals, and everything necessary to carry on said business. Apply to Lock Box No. 782, Postoffice, San Francisco, stating name and where an interview may be had. 17v10

Printer Boy Wanted.

An active and reliable boy, about sixteen years of age who wishes to learn the printing business thoroughly, in all its branches, can obtain a situation at this office upon presenting suitable recommendations.

Brandreth's Vegetable Pills.—This medicine, of enduring efficacy, is justly prized as a corrector of all disorders of the stomach and bowels, the common symptoms of which are costiveness, spasms, loss of appetite, sick headache, giddiness, sense of bloating after meals, dizziness of the eyes, drowsiness, and cramping in the stomach and and bowels. These symptoms being suffered to remain, a torpid state of the liver supervenes, and all the horrors of dyspepsia are experienced. Every function of the frame is to a certain extent prosirated; but a little perseverance in the use of BRANDRETH'S PILLS will ever restore the system from this state of misery. Two or three doses will convince the afflicted of their salutary influence. The stomach will speedily regain its strength, a healthy action of the liver will soon take place, and instead of listlessness, heat, pain, and jaundiced appearance, activity, strength and renewed health, will be the blessed result. Brandreth's Pills are sold at 25 cents per box, enveloped in full directions. Purchase none unless my private Government Stamp is on the box. See upon it "B. Brandreth" in white letters.

It is Impossible for editors to know ALL the merits and demerits of their correspondence, consequently the reader must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides and the evidence of any error which may appear will be received in friendship and treated with respect.

American and Foreign Patents.—Letters Patent for inventions can be secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past two years.

Favorable to Inventors.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

Payment in Advance.—This paper will not be sent to subscribers beyond the term paid for. The publishers well know that a good journal cannot be sustained on the credit system.

During the Fair

We hope the readers of the MINING AND SCIENTIFIC PRESS will look with leniency upon any deficiencies they may observe from the usual contents and make-up of our journal. Correspondents will also please bear patiently with the crowded state of our columns in giving full reports of the Exhibition.

OUR PAPER BY EXPRESS.—Owing to the fact of Wells Fargo & Co requiring publishers to pay 2½ cents per copy in advance on papers sent to subscribers in the interior we are obliged to make our subscription terms by express $6.50 per annum.

MINING AND SCIENTIFIC PRESS

PATENT AGENCY.

For the Pacific Coast.

OFFICE OF THE MINING AND SCIENTIFIC PRESS—No. 505 Clay street, corner of Sansome, San Francisco.

Information for Inventors!

Inventors on this coast having their applications for patents made out through our Agency can sign their papers at once, and thus secure their rights at least three months sooner than by trusting the same to distant agencies, situated in New York or Washington.

The Patent Law Amendment Act, of March 4th, 1861, and March 3d, 1863, now in force, introduces several important changes in our Patent System. The general practice of the Patent Office, however, in regard to the examination and issue of Letters Patent for new inventions, remains nearly the same as heretofore.

The amendment of 3d March, 1863, provides, in section 3, that every patent shall be dated as of a day not later than six months after the time at which it was passed and allowed, and notice thereof sent to the applicant or his agent. And if the final fee for such patent be not paid within the said six months, the patent shall be witheld, and the invention therein described shall become public property as against the applicant therefor: *Provided*, That in all cases where patents have been allowed previous to the passage of this act, the said six months shall be reckoned from the date of such passage.

The first question, therefore, that presents itself to the inventor, who desires to procure a patent, is: "Can I obtain a patent?" A positive answer to this question is only to be had by presenting a formal application for a patent to the Government, embracing a petition, specification, model, duplicate, drawings, and the payment of the prescribed official fees. Aside from these steps, all the inventor can do is, to submit his plans to persons experienced in the business of obtaining patents, and solicit their opinion and advice. If the parties consulted are honorable men, the inventor may safely confide his ideas to them, and they will inform him whether or not his invention is probably patentable.

Those who have made inventions and desire to consult with us respecting the same, are cordially invited to do so. We shall be happy to see them in person at our office, or to advise them by mail, or through the MINING AND SCIENTIFIC PRESS. In all cases they may expect from us an honest opinion. For these consultations, opinion and advice, we make no charge. A pen-and-ink sketch, and description of the invention should be sent, together with a stamp for return postage. Write plain; do not use pencil or pale ink; be brief.

Remember that all business committed to our care, and all consultations, are kept by us secret, and strictly confidential.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $30 to $20. The Government fee under the new law is reduced to ten dollars; and this sum does not apply, as heretofore, as part of the fee on presenting an application for a patent.

Inventors will oftimes find it very important to take advantage of the caveat system—the expense under the law being comparatively small.

To enable us to prepare caveat paper, we only require a sketch and description of the invention; no model being necessary.

Expense of Applying for a Patent, Rejections, etc.

Under the new law, the Government fee, on filing an application for a patent, is fifteen dollars; and if the patent is allowed, twenty dollars additional is required. If rejected, the first fee of fifteen dollars is all that is demanded. English, French, Austrian, Prussian Spanish, and inventors of every nationality, may now obtain patents in the United States upon the same terms as our own citizens. The only discrimination made is against subjects of government that discriminate against the inhabitants of the United States.

To the foregoing official fees must be added the Attorney's fees for preparing the various documents and drawings. Our charge for preparing a case, presenting it to the Government, and attending to all business connected with it, until a decision is given, is from $20 to $40. If the patent is granted no further agency expenses ensues. If the application is rejected, we cause a thorough investigation to be made into the reasons presented to the Commissioner for refusing the patent. In making this examination, we have access to all the drawings, models, books and specifications cited in reference, and we report the result as early as possible to our client.

If the rejection proves to be an unjust one—which sometimes happens—it can generally be reversed, and the patent obtained by contesting the case. For this prosecution we charge a fee proportionate to the extra labor involved, payable only on the issue of the patent; but our demand will be reasonable and satisfactory to our clients, and will be arranged beforehand by special agreement.

The system adopted by us works well, gives general satisfaction and presents to all applicants, rich or poor, an equal opportunity of having their patent cases prepared, conducted and prosecuted in the best manner, by experienced attorney's, upon the most moderate terms. Inventors who have rejected cases, prepared either by themselves, or for them by other agents, and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unequalled facilities in securing favorable results. We have been successful in securing Letters Patent in many cases of such a matter. Our terms for such cases are very moderate.

Models, Remittances, etc.

The law requires that the invention shall, in all cases, furnish a model, which must not exceed twelve inches in any of its dimentions; it should be neatly made, of hard wood or metal, or both, varnished or painted; the name of the inventor should be engraved or painted on it conspicuously.

When the invention consists of an improvement on some known machine, a full working model of the whole will not be necessary. It should be sufficiently perfect, however, to show, with clearness, the nature and operation of the invention.

As soon as the model is ready, it should be carefully boxed and shipped by express or otherwise, to our address, namely: DEWEY & Co., Mining and Scientific Press, No. 505 Clay Street, corner of Sansome, San Francisco, Cal. Prepay expenses and send express receipt to us by mail.

Simultaneously with the model, the inventor should send us the first installment of the Government fee, fifteen dollars. The money may be forwarded either by express with the model, or by mail. The safest way to remit is by draft on San Francisco, payable to our order. Always send a letter with the model, and also the remittance stating the name and address of the sender.

A full description should also be sent with the model, embodying all the ideas of the inventor respecting the improvement.

On the receipt of the model and Government fee, the case is duly registered upon our books, and the application proceeded with as fast as possible. When the documents are ready we send them to the inventor by mail, for his examination, signature and affidavit, with a letter of instruction, etc. One fee for preparing the case is then due and will be called for. The case will then be prescribed to the Patent Office, and as soon as the patent is ordered to be issued the Government fee, namely, twenty dollars.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so. We do not require the personal attendance of the inventor, unless it is one of great complication; the business can be well done by correspondence.

When the case consists of a new article of manufacture, or a new composition, samples of the separate ingredients, sufficient to make the experiment, and also of the manufactured article itself must be furnished.

The average time required to procure a patent, when the case is conducted at our agency, is three months. We frequently get them through in less time; but in other cases, owing to delay on the part of officials, the period is sometimes extended to four or five months, and even more. We make a special point to forward our cases as rapidly as possible.

Patent Office Fees, and How Payable.

Nearly all the fees payable to the Patent Office are positively required by law to be paid in advance. For the sake of uniformity and convenience, the remaining fees will be required to be paid in the same manner; that is to say, before the labor is performed for which they are to be received in payment.

The following is the Government tariff of fees established by law:

On every application for a design, for 3 y'rs and 6 mos...	$10
On every application for a design, for seven years.....	15
On every application for a design, for fourteen years.....	30
On every application for a patent, for seventeen years...	15
On every caveat.....	10
On issuing each original patent.....	20
On filing a disclaimer.....	10
On every application for a re-issue.....	30
On every additional patent granted on a re-issue.....	30
On every application for an extension.....	50
On the grant of every extension.....	50
On appeal to the Commissioner from Examiners-in-chief	20
On every appeal to the Judges of Circuit Court, D. C....	25

We have had successful experience in conducting these appeals and our services are rendered on moderate terms.

DEWEY & CO., Agents,

Mining and Scientific Press Office, No. 505 Clay street, corner of Sansome, San Francisco.

[Written for the Mining and Scientific Press.]

Mining at Reese River—The Mills about Austin, and their Management.

[Continued from last week.]

The next cause of the unproductiveness and temporary stoppage of work on many other really excellent mines in this district, is the fact that they belong to and are managed by incorporated companies, the officers of which are more interested in securing a "snug berth" for some one or more of their friends than in making the mine pay a dividend to the stockholders—some "Dandy Jim" from San Francisco, who jumps from behind the counter right down into the meanderings of Dame Nature's veins and arteries, demonstrating to a nicety how he would oblige the "old lady" to deliver up, at the touch of his "magic wand," (yard stick) the silvery streams circulating throughout her vast and complicated system. Of course, he could measure dry goods, vend cigars, gauge a barrel of chain-lightning, and compound it into the bargain. Wherefore, his activity as surveyor, engineer, gsologist, etc., etc. He passes muster, comes to the mountains, perhaps for the first time in his life, takes absoluts control of a mine; in many cases already well developed by the hard toil and well directed blows of the humble but practical and skillful miner. A change of operations must be had, the better to show his authority and—astuteness. He being mining engineer, by the grace and favor of his friends, cannot entertain suggestions from his subordinates, whose practical eye at once detects the error of the new-fangled innovation. His motto is, "Authority must and shall prevail," until the ledge is perhaps entirely lost, and the thousands of assessments also gone and literally "run into the ground." A grand collapse ensues—mine stopped—several of the hard working men are left unpaid, although the officials are paid in full. Superintendent declares the mine a humbug and a failure, and in many cases, to cover his own ignorance and shame, he takes especial pains to write down the whole district in which he figured, as a cheat and an imposition.

From such, no doubt, are manufactured many of the unfavorable reports regarding the mines of this place. But from such it has nothing to fear; its progress is marked and sure; of this proof, the most tangible, is to be seen and felt on every side. No apprehension need be felt of any serious consequences to the mining interests here from the temporary cessation of work on some of its most valuable ledges, which has been brought about by incompetent management. When we contrast the management of such mines as the Manhattan, Confidence, Midas, Whitlatch, Yankee Blade, Savage, North River, and many others I could name, with that of those "Jim-crack" institutions above described, and compare results, we should not wonder that the stockholders of the latter have come to a stand-still, and begin to inquire as to "what's the matter."

Take for instance the Manbattan mine, (late Oregan). It had nothing superior to those around it in its favor, either in its extent, richness of its ores, or in a geological or mineralogical point of view. It has always been subject to "nipping-out," breakages, and other disadvantages incident to all mineral veins; yet it has gone steadily on, enriching its fortunate owners, under the able but unpretending management of its worthy superintendent, Mr. John Frost. Mr. Frost has, by his sound practical knowledge of the business entrusted to him, not only filled the purses of himself and partners, but at the same time built the first really efficient mill in the town of Austin. And all this, by well applied means taken from their mines, while the "kid gloved gentry" were (instead of taking it from their mines) extracting it from the pockets of the unfortunate shareholders.

Another such example as that set by Mr. Frost may be found in the management of the Confidence mine, under the very excellent superintendence of Mr. Henry Newton. He, too, by unwavering perseverance and skill, succeeded in bringing the Confidence mine from comparative obscurity to a most enviable notoriety, being now, like the Manhattan, one of the leading claims in the district. Many others I might enumerate, but space will not admit at present.

I shall now close, by simply adding that it is fortunate for Reese River that there have been found at least a few of the right material among the worthy pioneers of the country, possessed of muscle, brains, energy and skill sufficient to enable them to lead the van in proving her merit to the title of being one of the richest mineral countries in the world.

J. R. M.

A BEAUTIFUL DISPLAY.—There are some articles in the Fair, very beautiful to be sure, but which are understood analytically at a glance; and there are others which constitute a study. They possess a world of interest, and are more attractive and instructive every time they are looked upon. Of such a character are those splendid gold, silver, copper, cinnabar, talc, sulphuret, mica, iron, hornblende, sand, agate, putrifaction, bark, wood, and other specimens exhibited at the Fair by Capt. J. M. Aiken. A more beautiful, elaborate or valuable mineralogical cabinet does not exist in the United States. It is the collection of years of patient toil and study—the classified arrangement of a gentleman deeply learned and attached to this particular branch of science; and, we are pleased to say, meets with that high appreciation which its rare merits so richly deserve. The affable courtesy and polite particularity with which Captain Aiken explains the especial features of the collection to visitors and inquirers, adds a charm to the department over which he presides.

WILLIS' BAND.—The music discoursed at the Pavilion is first class. Without it, the evenings would not be near so agreeably spent. With it, this brilliancy of everything is greatly hightened. When some favorite gem from the operas is discoursed, the eyes of the young ladies brighten and sparkle. The charming creatures trip over the floor with an elastic step and smile with a bewitchery that is "taking." The old folks sit down to listen to it; the poets, struck by some original idea under its ravishing influence, draw forth their note-books to make a memorandum; and the exhibitors become eloquent, hearing its strains, in describing the remarkable features of their different inventions.

FRUITS.—The collection of fruits was rather small at the opening of the Fair; but we observe that Mr. D. L. Perkins, the Golden Gate seed man, of Oakland, has spread a table of choice varieties from his gardens, which add materially to the interest of the horticultural department.

Descriptive Catalogue

—OF THE—

INDUSTRIAL EXHIBITION

Of the Mechanics' Institute, 1865.

1 Leffel & Meyers, Portland, Oregon: five Leffel's American Double Turbine Water Wheels, invented in Springfield, Ohio, 1862; four Leffel's Lever Jacks.

The smallest of the wheels on exhibition is a model; the next above is a brass wheel, six and five-eighths inches in size. This wheel, we are assured, has been in use eight months, at Spring Valley, Green county, Ohio, where it drove a woolen-mill of the following capacity: Three carding machines, thirty-six inches wide, with condensers; one spinning-jenny, 156 spindles, four broad power-looms, reels, pickers, etc., etc., under a twenty-five feet head with full power and entire satisfaction. It was then given to the Sanitary Fair, at Cincinnati, and bought by Chas. H. Gilgore, then given to the Sanitary Fair of Philadelphia, when it was purchased by Rev. A. Meyers, the present exhibitor. The next in size is a 10-inch wheel, and has been running at Mountain Spring, three miles east of Portland, Oregon, for six months. Under twenty-five feet head, it drove a 40 inch circular saw, cutting from 1,600 to 2,500 feet of lumber per day of ten hours. The two other wheels on exhibition are respectively seventeen and twenty-three inches in size, and of corresponding power. The Lever Jacks are calculated to raise with ease from six to forty tons each. The patent expired one year ago, but has been renewed, and a new patent obtained for improvements. They are now very generally used at the East.

2 Annie J. Columbet, Warm Springs: two Lamp mats; one Tidy.

3 B. F. Barker, 35 Webb street, San Francisco: Barker's Concealed Door Spring, with Door; one Model of same.

This door spring was invented by B. F. Barker, No. 36 Webb street, San Francisco; patent applied for in April, 1865. The manner in which it is applied does not tend to weaken the door or tear it from its hinges, but rather to keep it firm in its place and prevent it from sagging. When the door is opened to an angle of 45 degrees, the spring is nearly at its greatest expansion, so that on the last quarter of opening, the spring gradually loses its power upon the door, and the slightest obstruction will keep it open, if desired. The door closes without any dependence on the momentum. The cam, or lever, attached to the bracket, causes the spring to work in a parallel line, and its great length warrants it to work for years without relaxing in the least This spring may be applied to parlor or inside doors, for its working is so easy and silent that a mere child can open the door. And last, but not least, the door remains undefaced and without blemish, and the spring will work for years as perfectly as when put on. Most springs in use require great effort on account of increased strain on the last quarter of the opening of the doors; but this spring has its greatest tension at about half way open, and gradually relaxed in shutting. The spring after closing, still holds its grip, and keep the door snugly closed.

4 Dewey & Co., Patent Agents, Proprietors of the "Mining and Scientific Press," and Job Printers, 505 Clay street, San Francisco: The Daily Fair Press.

The above entry includes one new and improved Cordon Franklin Printing Press, largest size, with steam gearing apparatus; one fancy Cabinet Stand and Rack, containing 32 cases, and other Printing Materials. The Daily Fair Press is a sheet 23x32 inches in size, containing eight pages and thirty-two columns, and is circulated free to all visitors to the Fair. It will contain a full report of the Fair, and all interesting events and incidents connected with its progress.

7 A. Besson, 520 Merchant street, San Francisco: two dozen Cans, and two dozen bottles Preserved Milk.

8 C. Francois, agent, 605 Sansome street, San Francisco: one jar Cream Tartar; five bottles Cognac; manufactured by E. Vache Bros., Los Angeles.

The Cognac was distilled in April, 1865, from pure grape wines, raised at Los Angeles.

10 Leonard Dow, Sacramento: one Grain Separator.

This machine is quite peculiar in its construction, and consists in a series of sieves, placed one over the other, and arranged around a central shaft, in sets of from two to eight in number, as may be desired, and capable of cleaning from 50 to 250 bushels of grain per hour. The operation of the machine is very simple; the motion being imparted to the sieves by means of a shaft, on which there is a slide crank to regulate the length of the vibratory motion, and which may be readily adjusted. So small is the power required to drive the machine that a belt three-eighths of an inch in width will convey power sufficient to clean 7,000 pounds of wheat in an hour. The speed of the machine is regulated by cone pulleys. The wheat is placed in a hopper at the top, from which it is fed into the machine, automically, by means of a telescopic nozzle. Each machine is divided vertically into two or more compartments, called sets, into which the grain is fed equally by cross-bars dividing the flow. Each set may be comprised of a greater or less number of sieves in a set, as may be found necessary to perfect work. The mustard, chess, or other small grain, is first separated from the wheat and automically disposed of; the grain afterwards passes from sieve to sieve throughout the entire series, each sieve taking from the mass more or less of the imperfect grains, until the clean wheat is finally deposited in a proper reservoir at the bottom. There is also a convenient arrangement of raffers, by which the sieves may be simultaneously cleaned of anything choking them, by the simple pulling of a string, which operation may be performed as often as desired without stopping the machine. Handbills will soon be issued and obtainable at the machine more fully describing its working and advantages.

12 Paltenchi & Larsineur, 321 and 423 Jackson street, San Francisco: two Lions in Italian stone; four marble Vases; two marble Female Figures; one Eagle of Italian stone.

These works of art are placed at intervals around the rim of the fountain. The female figures and the eagle and the vases are quite artistic, and fine specimens of workmanship.

Charles Vallodien, San Francisco: one model of Brig Schooner.

e hull is planked in the same manner as ships of heavy onnage, every plank being separats and fastened in the usual way.

14 S. P. Taylor, agent Pioneer Paper Mill Clay street, San Francisco: sixteen bundles Wrapping Paper; three do. Butter Paper; six do. News Paper; four do. Fancy Wrapping Paper.

In addition to Mr. Taylor's show of paper, he also exhibits an entirely new material for making paper, which consists of the ordinary *malva* fibre, which grows so profusely about this vicinity. This tree, as it is sometimes called, is nothing more than a fibrous weed, which grows to a large size in this extremely productive region. A quantity of paper, the first experiment, and unbleached, is also exhibited by Mr. Taylor, from which it would appear that this material, so easily produced, might be utilized to a good purpose.

10. John Denn, 13 Moss street, San Francisco: one Wine and Cider Press, invented by Denn & Manrow, Sacramento, 1863.

This press consists of a compound of the lever and pulley, worked by a crank, with the aid of a pinion and spur gear. With the machine on exhibition, one pound of power applied to the crank will produce a pressure of 800 pounds upon the cheese or pulp. This machine is constructed double, forming two presses in one frame. An important peculiarity about this press is the oscilating falcrum, and the manner in which the lever is made to impinge upon the follower. The whole, to be fully understood, should be seen. A diploma was awarded to this machine by the last State Agricultural Fair, and by the Fair of the San Francisco Mechanics' Institute a year ago.

17 E. W. Walton, Drytown, Amador county, Cal.: one Wine and Cider Press.

This is a compound lever power mill, composed of a spur wheel and pinion; two pinions gearing into two racks attached to the follower. With this machine two men may cause a pressure of 35,000 pounds.

20 C. H. Harrison, 517 Front street, San Francisco: three Eccentric Steam Wrecking Pumps.

The value and efficiency of these powerful pumps are too well known to need any special notice. They have been repeatedly tested under the most severe and complicated trials, and for raising large volumes of water, with convenience and celerity, have never been equalled by any other pump on this coast.

21 E. Benoist, 643 Third street, San Francisco: three bottles Crude Oil; three do. Lubricating Oil; three do. Burning Oil; three do. Benzole Oil; one plan of Still, United States patent.

Plan of Still invented by A. Millock, New York. [See catalogue Minerals.]

22 J. O. Wright, 415 Pine street, San Francisco: one Patent Window Blind Hinge and Fastener.

This hinge is of a very simple construction and readily applied. With it a blind may be opened or shut, without raising the sash, by means of a crank on the inside of the window; it securely fastens the blind, whether open or shut, or holds it at any angle at which it may be left.

24 Joel Halsted, San Francisco: one Cider and Wine Mill.

This mill combines the grinder and press, and is capable of making five barrels of cider a day. For economy of room this is probably the best mill in the State. The press is capable of giving a pressure of fifteen tons, by means of a screw worked with a lever.

25 J. L. Moulthrope, Miners' Foundry, San Francisco: two Rope Coverings for Mining Hose, McAuley & Cheney's patent.

These coverings are designed to be placed on the outside of hydraulic hose, to strengthen the same. This covering, placed on a single hose, will make it as strong or stronger than a double or tripple hose, and can be made at a cost not much, if any, exceeding one-half the first cost of the single hose. The importance and advantages of such a protection, which can be furnished at so low a price, must be apparent to all persons interested in, or conversant with, hydraulic mining.

26 Mrs. E. Piper, formerly Mrs. Morris, 37 Sutter street, San Francisco: two Show Cases; one Table; one vase of Wax Flowers; one lot of Shirts, etc.

27 M. E. Traver & Brother: twelve Eureka Clothes Wringer.

These wringers may be seen in operation. There are no springs or thumb-screws about this machine to get broken or out of order, but by the use of elliptical steel springs it is rendered self-adjusting, convenient and durable; it is by the use of this clamp hinge made to fit a tub or washing machine equally well. The Examining Committee for the Mechanics' Institute Exhibition of 1864, under the head of "clothes wriagers," said: "A variety of these excellent household helps were found competing for popular favor. Though none of them are entitled to a premium [for the reason that the Institute awards nothing to articles of Eastern manufacture], we consider the Eureka, exhibited by M. E. Traver & Brother, worthy of honorable mention."

28 James Swett, San Francisco: three bottles Sonoma Red Wine; three do. White Wine.

Manufactured at Tokay Vineyard, and entered for competition; vintage 1863: by Csomorlanyi, Swett & Co.

29 James McCaffery, San Jose: one demijohn of Brandy; two do. Wine; one do. Usquebaugh.

32 E. Hawthorne, 638½ Mission street, San Francisco: one Model Life Raft.

This raft consists of a platform, resting on a series of air tubes, with a rail around the sides. It is calculated to be twenty feet long, and thirteen feet wide. The tubes to be made of galvanized iron twelve inches in diameter, and twelve feet long; sixteen of them to a raft. Such a raft can be placed on board of a ship, in sections, and in case of accident, put together in a very short time.

42 Dan'l & H. A. Winter, 620 Market street, San Francisco: one Broad Cast Seed Sower and Cultivator combined.

This machine was patented August 12th, 1862. It sows grain broadcast, and covers as it sows. It is claimed that with this machine the grain can be much more evenly spread over the field than it can be done by hand, and that by this evenness of sowing a very important increase per acre is made to the produce of the land—a most probable result. This seed planter is said to be in very general use, and exceedingly popular in the Mississippi Valley and grain-growing States.

46 N. S. Arnold, 306 Battery street, San Francisco: three Wringers; one Washing Machine; one Counter Scale; two Washing Machines

This wringing machine is known as the "Universal Clothes Wringer," and is said to be the original of the family of clothes' wringers. It is readily adjustable to a round or square vessel. The washing machine is that known as the "Little Giant." It is simple, compact, and cheap in construction, and works as a closed box. The balances work with a dial scale, and are neat and convenient, and much more ready in use than the ordinary lever balance.

47 S. W. H Ward & Son, 323 Montgomery street, San Francisco: Furnishing Goods.

This well known firm exhibits a show case filled with a very fine variety of Furnishing Goods.

49 Eureka Broom Factory, San Francisco: five Boxes Broom Brushes; one package Toy Brooms; three packages do. Wisp; two do. Brooms; five single Brooms.

50 Sheffield & Patterson, corner Battery and Jackson streets, San Francisco: two Mulay Saws; two Mill Saws; one Drag Saw; one Pit Saw; one Fellow Saw; four Cross-Cut Saws; seven Circular Saws; two Butcher Saws; six Butcher Blades; one Iron Saw; two Saw Sets.

The two mulay saws, two mill saws, and the six butcher blades or saws, are of California make. In this exhibition may be seen: 1st, a black plate of steel, as imported; 2d, a plate with the teeth cut and hammer hardened, but still black; 3d and 4th, one a mulay and the other a mill saw, both burnished and finished. There are two butcher blades or saws in frame and ready for work; there are six other blades wound up in circles and interlinked like a chain, to show the temper of the blades. The same blades will stand even a greater strain, to the extent of being brought into two or even three coils without breaking or losing their elasticity. The great difficulty heretofore encountered in making butcher blades has been to give them the right temper. Such is the nature of service required, so different from saws for wood, that if they are made a little too hard or too soft they are entirely worthless. To get them just right, and to bring them into that condition with unerring certainty has long been a mechanical desideratum. This thing, after long study and practice, Messrs. Sheffield & Patterson claim to have succeeded in accomplishing. Their method is a secret, known only to themselves. They have told us more about it than we deem proper to divulge, at least until they have obtained a suitable advantage from their discovery. Their work speaks for itself. Both members of the firm are experts at the business, and they propose to get out, at an early day, suitable machinery for going into the business of saw manufacturing on an extensive scale.

It is well known that the ancients possessed a knowledge of tempering metals, particularly sword blades, far beyond any knowledge of the present day. If we are allowed to guess, we would venture the assertion that Messrs. Sheffield & Patterson *have re-discovered that secret.* At all events, we have reason for believing that their process is something entirely different from any now employed by any other manufacturer. These gentlemen are also able to accomplish another thing which, we believe, no other mechanics have yet succeeded in doing. They will take any mill saw, circular or mulay, which has passed through a fire, sufficient to entirely destroy its temper, and restore it to its original quality; no matter how much bent and contorted it may be, provided it is not "burnt" so as to destroy the texture of the steel. The mill and mulay saws which they exhibit, of their own make, are, we believe, the first ever manufactured on the Pacific coast.

55 Mrs. I. J. Howard, corner Pine and Montgomery streets, San Francisco: three Abdominal Supporters for Ladies; one pair Improved Shoulder Braces; one Cigar Case; two Pencil Drawings; five Book Marks on Rice Paper.

57 John Daley, Second street Dry Dock, San Francisco: one Race Boat.

Designed for boat club, and to be manned by four men. Dimensions—36 feet 6 inches long; 2 feet 10½ inches wide, 13 inches deep.

58 J. H. Bibble, Santa Clara: two large Milk Cans, with planished tin.

62 Charles F. Boshew, San Francisco: twenty papers Warren's Lustrine; one specimen of Gold and Quartz from Isabella Mine; one specimen of Gold Quartz from Ninned mine; one specimen Gold Quartz from Gold Point Mine; one Shell with Lord's Prayer written upon it.

69 Abbott, Downing & Co., 618 Battery street, San Francisco: one Stage Coach.

72 Koenig Brothers, 608 Washington street, San Francisco: seven pairs Boots; one pair Shoes.

74 W. W. Walmsley, 112 Fourth street, San Francisco: five pieces Artesian Well Rope; two pieces Ventilators.

79 A. M. Stetson, 54 Third street, San Francisco: one Model Amalgamator.

This amalgamator has been in use in California some eight or ten years. It is self-operating, and is designed to be placed after the usual amalgamating arrangements. It consists of a series of boxes arranged one over another, after the manner of a case of drawers; these boxes or drawers are pierced with a number of hollow cylinders through which the pulp passes from the upper to the lower box, the cylinders being so arranged as to break joints, and cause the pulp to fall from the cylinders of one box upon the vacant spaces of the box below. The gold and amalgam is collected upon the principle of its specific gravity. These boxes can be arranged in an infinite series, governed only by the amount of fall at command, and forms the cheapest amalgamator in use, and one which requires the least amount of attention. It is applicable to placer as well as quartz mines, being used in the former in place of an under current sluice or riffle, when the finer portions of the gravel, which chiefly contains the gold, can be allowed to fall through the sluice bottom of the sluice, with but a small quantity of water.

80 A. Hunter, San Francisco: one Concentrator and Amalgamator; one Grain Separator.

Hunter's Concentrator for saving gold and amalgam, and for concentrating sulphurets, has been proven a most effective machine. It has been frequently described, and is now quite well known to the mining community; but has not been so extensively introduced as its merits would seem to warrant. It is constructed something on the principle of Bradford's separators, but is far more effectual and simple, and capable of doing many times as much work in a given time.

Hunter's Grain Separator was exhibited last year; but the present machine has been considerably improved over that heretofore used. It has been fully and thoroughly tested, to the satisfaction of numerous practical men, who have unhesitatingly accorded to it the highest meed of praise. Its construction is plain and simple; the grain is fed into the machine through a hopper, where the flow can be easily regulated, as it passes thence upon and through perforated zinc plates, the smaller grain, such as barley or wheat, passing through the openings, and the larger, such as oats, being conducted off into a proper receptacle. The full kernels of clean wheat are also separated from the broken, and each conducted automically to its proper receptacle. Any size machine can be manufactured, suited to the largest or smallest demand.

81 John Mason, San Francisco: one barrel Light Ale—one barrel Stock Ale; one barrel Porter.

82 Standard Soap Co., San Francisco: seventeen boxes Soap; two jars Soap, ten boxes Washing Powder.

The Standard Soap Company has been established in this city for the purpose of manufacturing regular and reliable qualities of washing soaps for family, laundry and toilet uses. They have introduced a very excellent and desirable article of Chemical Olive Soap, which has already gained a high position in this community. This company also manufacture a concentrated erasive washing powder, containing all the requisites for being readily converted into a fine soft soap, for immediate use. This powder is also adapted to hard and soft water.

84 A. B. Winegar, San Francisco; ten large bags Salt; ten small bags Salt; seven boxes Salt.

The table salt presented by this exhibitor, from the Union Salt Works, is white, dry and fine, and appears to be fully equal to the best imported article.

85 Rosenbaldt & Co., 123 & 125 Montgomery street, San Francisco: one show case with Real Laces and Fancy Goods.

91 A. Brown, 214 Third street, San Francisco: one Range and Fixtures and Boiler attached; one Chimney Top; one Ventilator; two Ten Gallon Milk Cans; one Three Gallon Milk Can; one Two Gallon Milk Can; one One Gallon Milk Can; one Half Gallon Milk Can; one One Quart Milk Can; one Milk Strainer; one boot with two Basins; three Scoops; one Beer Measure.

97 Bullard & Battles, 731 Harrison street, San Francisco: four Petroleum Stoves with Furniture.

This Stove (without a Radiator) is designed for all kinds of cooking and general housework. With a Radiator it will heat apartments, it burns neither wood or coal, but benzine; emits no smoke or odor; is portable, and does its work quick and well.

100 E. T. Barlow, San Francisco: two models of Cars and Couplings.

These are self-acting car couplings, with link and pin. The link is held in a parallel line by means of a series of plates within the "bumper head," at an expense of about three bits for each plate; the pin is held perpendicular by means of a light plate of iron laid lengthwise of the draw-bar. When the cars come together, the pin is let fall into its place by means of pressure exerted on the spring.

102 S. M. Sanborne: one frame Model of a Barn.

This is intended as a model barn for a large farm, and contains 920 pieces of timber, regularly framed with mortices and tenons, and held firmly in place with wooden pins. It was constructed by the exhibitor, who resides on First Avenue, near Mission Dolores, in this city.

105 W. T. Cutter, jr., San Francisco: thirteen cases of Whiskey; two Portable Cases of Liquors; two Kegs: one Frame.

108 J. & P. Medau, 1004 Dupont street, San Francisco: one case Meerschaum Pipes.

109 Morris & Co., San Francisco: one case Matches.

These matches are of San Francisco manufacture, and known as the Excelsior Match, J. S. Day & Co., sole agents.

110 Curry & Bro., 317 Battery street, San Francisco: one case Guns and Pistols.

Included in this collection may be seen an English pigeon gun, manufactured by Wm. Greener, of London, and a Henry's patent repeating rifle. Mr. Carry, the exhibitor, is the regularly appointed agent for the sale of the famous Derringer pistols.

111 J. A. Hobbart, Oakland, California: one Hutchinson's Wine and Cider Mill.

This is one of the combined mills in the Pavilion for grinding both apples and grapes. With it one man will grind from six to ten bushels an hour, without bruising a seed. The machine is a California invention, and is manufactured at the Golden State Iron Works, in this city. It is equally applicable for grinding all kinds of berries, rhubarb, etc.

113 B. H. Ramsdell, San Francisco: one piece Coal from Black Diamond Coal Mine.

This mammoth block of coal is about five feet long by four high, and over two feet in thickness. It will weigh over one ton. It is a fine sample of California coal, and well worthy the attention of those who take an interest in the development of this important branch of the mineral wealth of California.

115 G. Manning, 140 Fourth street, San Francisco: four pieces School Furniture.

116 California Borax Co., San Francisco: one case Borax.

110. Eastman & Brother, San Francisco: four pieces School Furniture.

These articles consist of movable school desks and seats, supported upon a light and tasteful iron frame-work.

120 Jarvis Jewett, San Francisco: one Palmer's Artificial Leg.

Palmer's artificial limbs are now manufactured in large numbers, to supply the losses occasioned by the casualties of the late terrible war. A large number of officers, who have lost *both* legs, have been supplied by Mr. Palmer with such perfect substitutes that the casual observer would scarcely notice but what they were walking upon their natural limbs. Mr. Jewett, the exhibitor of the one now in the Pavilion, is the sole agent for their sale in this city.

121 J. M. Aiken, Coulterville, Mariposa county, California: one case and cabinet Mineral Specimens. [See Mining and Scientific Press Catalogue of Mineral Collections, etc.

123 Tubbs & Co., San Francisco: seventeen coils Manilla Rope, entered for Premium.

Messrs. Tubbs & Co. are the pioneer rope makers on this coast. After a number of years of unremitting effort, and the outlay of a large amount of money, they have finally succeeded in placing the business on a permanent and paying basis. Their establishment, which is located upon the Potrero, is one of the most perfect and complete on the continent. They have facilities for the manufacture of the largest rope which is ever called for, and of almost any desired length. Some of the largest and longest ferry ropes ever manufactured are now in use on this coast, having been made at the rope-walk of this company.

124 Arizona Consolidated Mining Company: one bar of Lead and Silver; one Specimen Silver and Lead Ore. [See catalogue of minerals, etc.]

129 R. L. Solomon & Sons, San Francisco: one Glass Case of Upholstery Goods; four Chairs; and Outside Drapery

This collection of upholstery goods is really superb, and its collection and arrangement bespeak both judgment and taste.

133 F. Nehrnich, San Francisco: one 630 Gallon Cask.

136 Lewis Leland & Co., Occidental Hotel, San Francisco: two cases Confectionery; one case Minerals. [See catalogue of minerals.]

137 Blake & Co., 524 Montgomery street, San Francisco: one case Military Goods; one case containing Silk Hat.

This is one of the most elegant cases of goods in the Pavilion, and affords a most excellent opportunity for visitors to study into the mystery of the "stars and bars," which form such an important adjunct to the military ornamentation of an officer's wardrobe.

139 E. Randal, San Francisco: six Specimens Copper Ore from La Victoria mine, Mariposa county. [See catalogue of minerals.]

140 Zwick & Loeven, San Francisco: sixteen Boxes Extract of Coffee; forty-four bottles Mustard.

Messrs. Zwick & Loeven make a fine display in their line. They obtained a diploma from the Instituto last year for their extract of coffee.

141 J. L. Chase, San Francisco: one Washing Machine, New York manufacture.

The wash boards of this machine are constructed upon a principle quite novel. A circular board is made to revolve against a stationary one by means of a crank, whereby the clothes are rolled and pressed until free from dirt.

142 A. E. White, San Francisco: two Boot Blacking Machines.

These machines are quite a novelty, and answer a most useful purpose. Although they may not do their work quite as well as the hand, still the saving of time effected by them will soon come to be considered quite an object.

143 Meyer & Jonasson, 10 Montgomery street, San Francisco: nine Cloaks; two pieces cloth; one piece velvet.

Meyer & Jonasson exhibit a magnificent piece of Lyons' premium velvet, 2¼ yards wide, manufactured expressly for them. All the cloaks of this house are made under their personal supervision.

145 F. B. Lamb & Sons, Agents, 115 Jessie street, San Francisco: one Edson's Patent Washing Machine.

This machine is very simple, and consists of a tub and cover. The machinery, which is worked by means of a lever, is all connected with the cover, and gives a rotary motion to the clothes. It is very easily worked, and not liable to get out of order.

146 John Bohn, 1218 Dupont street, San Francisco: one Stove and Fixtures; six Articles Tin Ware.

147 J. C. Mayer & Sons, 5 Montgomery street, San Francisco: one lot of Furs, Robes, etc.

These robes and furs are all made in San Francisco, and special attention is called to the superior style of workmanship. This firm has had thirty years of experience in the business, and during that time has received many diplomas for superiority of work; several of which are exhibited.

149 Daniel Norcross, San Francisco: two cases Regalia and Military Goods.

We have here a very fine display of gold and silver embroidery on regalia and military goods.

150 M. Keller, 609 Front street, San Francisco: one stand with thirty one bottles of Wine and Bitters.

154 Misgill & Cooper, San Francisco: one case Horse Shoes, California manufacture.

155 F. F. Misgill, San Francisco: one pair Horse Shoe Pincers.

158 B. D. Wilson & Sons, San Francisco: sixty-two bottles Wines, from Los Angeles.

These wines and brandies are from the vineyards of D. B. Wilson, and are samples of vintages of the following years: 1858, 1859, 1860, 1861, 1862, 1863 and 1864.

159 P. Nolan, San Francisco: two pair Boots, and Glass Case.

160 Dr. H. A. Benton, 109 Montgomery street, San Francisco: one Electro Galvanic Battery, Dr. Kidder's patent.

163 C. A. Plummer & Co., San Francisco: three bottles of Salt.

This salt is manufactured in vats by the Crystal Salt Company, the only manufactory of the kind in California.

164 Johnston & Reay, San Francisco: one Range; one Stove; one Double-Action Force Pump; one Garden Engine; one Patent Ventilator

The ventilator is of the centrifugal pattern, invented and made by the exhibitors, who have applied for the patent. It is warranted to cure smoky chimneys in all cases. A premium was awarded for this chimney-top last year, after a practical test with two others.

166 Mrs. C. M. Chapman, 687 Market street, San Francisco: one case of Hair and Hair Coloring.

This article is claimed to be of a purely vegetable composition, and warranted not to injure, but to promote the growth and strength of the hair.

167 Wm. M. Butler & Geo. Bennett, 633 Clay street, San Francisco: one Dental Chair; one large Marble Vase; one piece Statuary.

This is one of the novelties as well as one of the most attractive objects of the exhibition. Numerous contrivances have been devised for preparing a dental chair in which the patient can be readily placed in various positions at once comfortable for himself and convenient for the operator. The ball and socket joint has heretofore been generally relied upon to procure the movements necessary to be accomplished in obtaining the end desired. The inventor of this chair, however, has adopted an entirely new complication of devices, which places the patient much more fully under the control of the operator, affording both a wider range of movement and requiring the outlay of less power in obtaining the same, than any other dental chair hitherto devised. The body of the chair rests upon an iron pedestal, which is shown in connection with the completed chair, and which by the operation of levers, cog-wheels and crank, all placed within the convenient reach of the operator, can be made to incline the chair backwards and sideways, to and from the operator to an angle of forty-five degrees. The foot-board and head-rest and seat of the chair are each arranged so that they can be adjusted to suit the stature and convenience of the patient, while the whole chair is arranged with an air and finish for comfort which almost takes away the idea of pain, in connection with its occupancy. An elegant and conveniently placed spittoon is attached to the chair, with which is connected an amalgamator for saving any pieces of gold which may be expectorated by the patient while undergoing the various operations connected with tooth-pulling or filling. The chairs on exhibition are of California make as well as invention, and present as elegant specimens of workmanship, whether in the wood work, or upholstery, as are often met with anywhere. We understand that a number of orders for their manufacture have already been received, and that measures are being taken to introduce them into Europe.

169 R. F. Rocchiccioli, 522 California street, San Francisco: four Coal Oil Lamps; two Candelabras; three Statues; ten Brackets; two Vases; one Pitcher; one set Grate Bars; one Bic Plate.

All the articles in this collection are made in San Francisco. Special attention is called to the samples of electrotyping. The lamps are gold and silver plated, and in style and finish challenge competition.

171 United Annaheim Wine Association, 321 Montgomery street, San Francisco: four dozen Wines and Brandies.

172 C. Kleinclaus & Fauss, Willows' Brewery, San Francisco: one barrel Ale.

174 H. M. Bernard, Sacramento City: one Track Sulky, weight 70 lbs.

175 Dannenbaum, Katzenstein & Co., 20 Montgomery street, San Francisco: one case Fancy Articles.

This case contains a very fine display of laces, nets, combs and pins for the hair, also samples of very fine embroidery.

178 W. S. Thompson, San Francisco: one Rockaway.

This carriage shows fine workmanship, combining neatness, lightness and strength.

180 Teuber & Hoffman, 431 Kearny street, San Francisco: one Show Case.

182 John Crocker, 744 Howard street, San Francisco: one Washing Machine; one George's Patent Wringer.

George's Patent Challenge Machine is constructed upon an entirely different plan from any other yet offered. By it the dirty parts of garments can be held in such a manner that they receive as much extra washing as necessary, without rubbing with the hands; it will wash either a single bed spread or handkerchief, and by means of the "regulator" may be made to wash the finest muslin without injury to the cloth.

185 E. F. Barlow, San Francisco: one Model Car Switch.

This, unlike ordinary switches, raises the track and lays it in position, instead of sliding it.

186 Mrs. Matilda Clements, San Francisco: one case Children's Fancy Clothing.

187 W. F. Burke, corner Pine and Montgomery streets San Francisco: one show case Ladies' Gaiters.

191 W. W. Hanscom, San Francisco: two Hanscom's Quartz Crushers, different sizes.

This quartz crusher, a model size of which is exhibited, has proven itself a most efficient machine for crushing rock. It combines strength with compactness, and offers the greatest facility for adjustment so as to reduce the ore or rock to the desired degree of fineness. It is especially adapted for reducing the low class of copper ores for concentrating, for breaking rock for road-making, and for reducing quartz to the degree of fineness required for subsequent trituration in pans. The advantages which it promises over stamps, grow out of the fact that it crushes the quartz dry, which may be subsequently ground to any degree of fineness in pans.

193 Brown & Wells, San Francisco: one Newell Post and specimen of Rail and Ballisters.

This finely carved and panel work post is made of black walnut, and is intended to support stair rails and lamps, or gas fixtures for lighting the halls or entries. The rail and ballisters are also made of black walnut.

195 Kirby & Co., Santa Cruz: two rolls Sole Leather; nine Sides assorted Leather.

This leather was made in Santa Cruz, and will compare favorably with any ever imported.

196 E. S. King, San Francisco: one Turnip.

This turnip was raised in a garden on McAllister street in this city. It measures thirty inches in circumference, and weighs six and a half pounds.

197 Mrs. I. C. Baldwin: one case Hair Work, made in Marysville

198 Dr. J. Strenzel, Alhambra Valley, Cal.: one lot of Wines.

202 W. R. Frink, San Francisco: one Improved Machine for manufacturing Soda, or proper Machinery.

203 Mrs. C. Cook, 645 Clay street, San Francisco: two cases Hair Jewelry; two frames Hair Work; one case Shell Work.

206 J. W. Van Zandt, San Francisco: one lot Perfumery.

208 G. H. Hitchcock & Co., San Francisco: one case Blank Books; one model Bottle Ink.

This is really a splendid collection of blank books for counting-room and bank use. They were manufactured in this city to the order of the exhibitors, and furnish as creditable a display in this branch of manufacture, for serviceable use, as can be produced in any city in the Union.

209 H. Wunnenberg & Co., New York Brewery, San Francisco: two and a half barrels Ale.

211 Dr. J. P. Van Iserburg, San Francisco: three bottles Tape Worms; three bottles Heads of Tape Worms; one bottle Nondescript; nine bottles Worm Syrup.

213 V. M. Foucault, Washington Territory: one case Geological specimens. [See cat. minerals.]

214 H. M. McCormick, Tulare county: one lot Silver Ore, from Kearsarge district. [See cat. minerals.]

216 J. H. Cbintz, San Francisco: one Artificial Leg in case.

This leg is made of light wood, covered with drum skin and enameled. It has as far as practicable all the movements of a natural limb, and has met, both here and on this coast, with marked success. For strength and durability it has no superior.

219 Pacific Straw Works, 603 Market street: one case Straw Hats and Bonnets; one Machine, Osborn's patent, for making Hat and Bonnet Frames.

The bonnets and hats here exhibited are all made in San Francisco, under Osborn's patent, for making seamless hat frames. The Pacific Straw Works have the sole right to manufacture these frames on the Pacific coast. The machine here exhibited may be seen in operation every evening. It is used for making the seamless hat frames. The models or dies used are manufactured by the exhibitors. The average work done by two of these machines is one frame per minute.

220 C. A. Plummer & Co., San Francisco: one jar Liverpool coarse Salt.

222 Rubber Clothing Co., San Francisco: one case Rubber fancy Articles and Jewelry.

Joseph Fraser, 642 Sacramento street, agent for the "Rubber Clothing Co." of New York, exhibits a very fine assortment of India rubber goods, embracing clothing, blankets and piece goods, together with a large and elegant assortment of fancy articles for almost every variety of domestic and general use. The great variety of uses to which this useful product of India rubber can be applied is quite fully illustrated by an examination of the articles of fancy and utility which are tastefully arranged in the show case connected with this exhibit.

224 John Martell, San Francisco: one case Silver Plated Goods, Couch and Carriage Trimmings.

226 P. Mulcahey, San Francisco: two boxes Cal. Soap.

227 Geo. C. Paine, San Francisco: one model Fence.

228 John Reed, San Francisco: one model Life Boat.

[*Continued on 4th Page.*]

An Invaluable Relic.—Mr. Scott Tidball, the artist, has in his possession, and will place on exhibition at the Fair, in a day or two, a camp pocket-knife, once owned by Gen. Washington. It is an ivory shaft, in the shape of a cannon, about five inches in length and three-fourths of an inch diameter at the breach. It is bound by three silver bands. The breach section unscrews and reveals two interior tubes or barrels, containing knife blades. These are alternately screwed into a small orifice at the breach end, when used. The small end contains the die or impress of a seal, and the center section a perpetual almanac. The knife was presented to Col. Wm. Thornton, on the eve of one of Washington's great battles, (Monmouth, Mr. Tidball thinks) in which the Father of his Country was afraid the issues might prove doubtful. There can be no question of the genuineness of the article, as Mr. T. has credentials in his possession to substantiate its authenticity.

North American Life Insurance Co.—A man's life is "of few days and full of trouble." This is the scriptural admonition, upon which we might without violence presume the insurance company above mentioned has been founded. Those who are engaged in hazardous pursuits, and possess only moderate means with a family depending upon them for support, cannot be too sensitively alive to the importance of taking out a policy of insurance. Should they lose their lives, something remains for those who were objects of endearment to lean upon. To insure is a good thing, an excellent thing, and the North American Company is a responsible and liberal institution, as we have already intimated, from which to receive a policy.

Japanese Collection.—Mr. E. M. Van Reed, recently from Japan, where he resided six years, and acquired a knowledge of the language of that semi-barbarous race of varlets, has introduced into the Pavilion of the Fair a collection of Japanese articles, belonging to his own private cabinet, which he secured only after great trouble and considerable expense. Our limited space will not at this time admit of a catalogue notice of the many curious articles composing his museum; but we would call the especial attention of naturalists to a book containing the Japanese zoology in art, and entomology in detail. The exact titude of the likenesses and the perfectness of the coloring, are pronounced by competent judges to be inimitable, even in this country, where art boasts its champions and masters. He exhibits a tortoise, cut from crystal, also a lot of swords, finer in the texture of their fabrication than the celebrated Damascus blades, and supposed to have been the product of an art now lost to the Japanese themselves; a thirteen-inch explosive shell, taken from one of the forts at Shimonoseki; two suits of armor, composed of iron and bone; a closely knit impervious chain coat of mail; and a large number of other interesting articles of various descriptions, amusing and otherwise, in the study of which the antiquary will find a world of delight. The owner of this cabinet holds it priceless in value, and wishes it to be understood that none of its curiosities are for sale. It has been introduced merely as an addition of attraction to the Fair.

The Art Gallery.—In the photographic department of the Art Gallery the display this year is very fine, and the local photographs pretty generally represented. But there is a falling off in the number of oil paintings. Only three or four artists have entered the field of competition. Why this is so, we can not say. It is much to be regretted, however; for no feature of the Exhibition, aside from late and useful inventions, is more attractive to visitors.

Mr. Speaker Colfax does not take his departure for the East until the steamer of the 3d of September. His speech to the ladies of the New England Kitchen will probably be delivered to-morrow night, although there is no certainty about it.

Lively Engagement.—The New England Kitchen, at the Pavilion, is having a lively run, to the credit of the fair managers and the benefit of the Sailors' Home fund. The receipts up to last night amounted to over $1,700.

Programme of the Kitchen.—The quilting frolic will last every evening in the New England Kitchen, until the quilt is completed, with an interlude each evening of dancing. When there is any change in the order it will be duly announced.

A Huge Blast.—Recently, in the claims of American Company, on Manzanita Hill, near North San Juan, a charge was put in consisting of three hundred and twenty-three kegs of powder. Its effect was immense, blowing down dirt enough to keep the company washing for three weeks. During this time they made two runs, cleaning up from the first run $10,000, and from the second $8,500.

Two Miners Killed by Foul Air.—The Copperopolis *Courier* says that John Mitchell and Jeff Cranmer were killed by foul air, in the Samson Tunnel, at Dry Creek, near Vallecito, on Wednesday last; and several men who went to the rescue narrowly escaped the same fate.

Several discoveries of petroleum had been made in New South Wales, and the subject was attracting the attention of Parliament and the manufacturers. Experiments were making at Sydney with a view to establishing a refinery.

Another Mammoth Yield.—Mons. Ripert, of the Eureka Company, Grass Valley, cleaned up on Monday, 2,000 ounces of amalgam, the result of a few days' crushing. The batteries of the mill were untouched.

Our Circulation.—The Mining and Scientific Press has a large and permanent subscription list, and enjoys a more universal circulation among stockholders and persons directly interested in mining than any other paper on this coast.

Descriptive Catalogue

—OF THE—

INDUSTRIAL EXHIBITION

Of the Mechanics' Institute, 1865.

CONTINUED.

228 John Reed, San Francisco: one model Life Boat.

This boat has very fine lines and bearings, with extensive air-chamber capacity, and is provided with valves so arranged that the buoyancy and motion will relieve the boat of any water which may be shipped. Boats were constructed upon this plan in Boston, by the exhibitors, and adopted by the Massachusetts Humane Society. This boat was upon exhibition last year, and awarded a premium by the committee on boats, ships and models.

229 S. F. Class Works: one Stand Fancy Articles in Class, Cal. Manufacture.

The exhibition of this company consists altogether of white flint glass. This is the second glass company established on the Pacific Coast, and is an individual enterprise. The wares exhibited are made from California materials exclusively. Even the clay from which the pots are constructed at this manufactory is from near the banks of the American river at Folsom. This clay has been thoroughly tested and pronounced fully equal to the best imported article. It has now been shown, by actual experiment, that California can produce, in its utmost perfection, every article needed for carrying on this already important and rapidly growing industrial enterprise. The quality of the glass exhibited is equal to the best imported. The lamp chimneys are pronounced superior to those brought from the East, which are chiefly manufactured at Brooklyn, New York. This may be set down as another important evidence of the progress that is constantly being made in this city in the development of the wonderful resources of California.

230 E. Mandeville, San Francisco: one Bellows, Cal. make.

These bellows are thoroughly made, of good material, and intended for use of blacksmiths.

232 A. S. Hallidie & Co., San Francisco: sample Cal. made Wire, Wire Rope and Cord.

This exhibition consists of fine drawn wire, and wire rope of all sizes, from a little twisted thread of fine wire not more than a twentieth of an inch in diameter, up to a cable of strength and size sufficient to hold the largest ship of war. These ropes are made round, or flat, according to the uses to which they are to be applied. The flat rope, is employed for windlasses used in mining shafts. All the articles in this exhibition are of California manufacture, and were produced at the works of Messrs. Hallidie & Co., located in the northern portion of this city. Wire rope possesses much advantage over hemp rope for various purposes, especially such as mining and bridge building. The same strength of rope made of wire represents only about 65 per cent. in weight of that made from hemp; and in mining uses, in the presence of water, this percentage of difference is greatly increased by a great absorption of water by the hemp rope, from which that made from wire is entirely free. For these reasons, wire rope is being quite extensively introduced into mining, and the establishment for its manufacture is one of great importance to the entire Pacific Coast.

233 Mr. Layne, Placer County: specimens Silver Ore. [See cat. Minerals.]

234 John B. Owens, 10 Third street: one case assorted Coal Oil Lamps; samples of Coal Oil Cook Stoves

The stoves are known as "Fish & Billings' Patent," and are designed for heating and nursery purposes.

235 J. A. Hobart, Oakland: one Mazana Plant of Italy, very rare.

236 J. Joseph & Co., Pine and Montgomery streets: samples of Boy's clothing, made out of Mission and Pioneer woolen goods.

These clothes are made in San Francisco, from cloth manufactured by the Mission and Pioneer Woolen Factory, from California grown wool.

237 J. Sajous, San Francisco: lot Half and Half in bottles.

239 Dell. Cranner & Co., Front street, San Francisco: one Coal Oil Cooking Stove; one piece of Paraffine; Six samples of Coal Oil; two samples fine Lubricating Oil

The stoves are called the "Portable Coal Oil Cooking Stoves." They are of a very simple arrangement, and as easily used as a common kerosene lamp; by the use of two or more burners sufficient heat is obtained for most family cooking; they do not heat a room in which they are used, and the cost per hour for two hours is only one cent. This firm have also cylinder stoves, expressly for heating, which, with a little alteration, may be used for cooking, taking the same furniture as the cooking stoves.

240 J. D. Arthur & Son, San Francisco: one New York Reaper and Mower combined; eight assorted Ploughs.

It is said that there are 1,000 of these machines in use on this coast, which, if the statement is correct, affords the best evidence of the value and efficiency of this useful machine. They are manufactured of a size to cut a swath six, six and a half and seven feet wide. The mode of construction and manner of working of these machines is quite familiar to all acquainted with agricultural machinery.

244 F. C. M. Fena, San Francisco: two cases Embroidery Stamps.

245 J. S. Fogg, Oakland: one Self Emptying Well Windlass.

This is a very simple and compact arrangement, by which the bucket, when it is raised to the proper position, comes automically in contact with a spout, which opens a valve in the bottom of the bucket, emptics the water from the same, and conducts it to any convenient receptacle upon the outside of the curb, thus obviating all necessity of raising the bucket by hand to pour it out. In drawing a bucket of water by this arrangement, and emptying the same into the vessel on the outside of the curb, there is no necessity of taking either hand off the crank handle. The entire apparatus is simple and cheap, costing but $25. It is a new invention, for which a patent has been applied for. It is made to order in Oakland, by the inventor.

246 Miss Maggie Coughlin, San Francisco: one tub Soft Soap, home made, from table scraps.

An important lesson of economy is taught in the exhibition of this homely but useful product of household industry. Many a dollar may be saved in this way, with a little care and attention, which would otherwise be thrown to waste. The contributor, it will be noticed, is yet a Miss; she will be pretty sure to make a prudent and economical housewife, one of these days.

247 J. B. Johnson, San Francisco: one Colburn's Patent Churn.

A neat and convenient machine for churning, which was examined and highly approved of by many of the best Western butter makers, at the last Ohio State Agricultural Fair, where it was successfully tested in competition with five other and different churns.

248 L. Hollaway, Gilroy, Alameda Co.: one Gang Plow.

This plow is a California invention, and was patented by the exhibitor March 21, 1865. The plows may be arranged in gangs of two or more, and are carried by an adjustable frame work behind the driver's seat, and under whose complete control they are placed by a convenient lever arrangement, which will carry them to any desired depth, or raise them entirely from the ground. The lever is worked like an ordinary wagon footbreak.

249 J. C. Couldio, San Francisco: four specimens Argentifernus Galena. [See cat. minerals.]

251 John Mallon & Co., San Francisco: one lot Ground and Cut Glass.

The specimens exhibited are highly creditable, showing ornamental gronps of flowers and various other devices, plain and colored, and all well executed and exceedingly neat and appropriate. They are fine exemplifications of the skill of the artist.

253 L. P. Collins, San Francisco: seven specimens Copper Ore, from Taylorsville, Plumas Co. [See cat. minerals.]

254 H. Schuman, San Francisco: one case Meerchaum Pipes and Fancy Articles; two cases Canes; one lot Tobacco and Cigars; one lot Canes.

256 Standard Soap Co., San Francisco: one box Medals.

257 William Saunders, San Francisco, sole agent for the Pacific coast: Patent "Pulley Evener," for two horse draft.

The pulley-evener does away with whiffle-trees entirely, for two horse draft, by the use of a chain or strap pressing half round an iron wheel on the centre pin for the inside tugs; it is lighter, very much stronger and easier on the horses, as by its use the collar is not kept constantly pressed to the shoulders, and the air keeps them from sweating and chafing; it is cheaper and more durable; has been tested in Michigan, giving entire satisfaction. For lead bars the pulley is attached in front of the evener and works equally as well.

260 J. R. Jewett, Petaluma: two Cheeses.

[To be Continued]

A Relic Preserved.—Capt. Moses Tucker of the whaling ship Sophia Thornton, relates that Wardell, the pirate commander of the corsair Shenandoah, took particular pleasure, in connection with his crew, to exhibit a spirit of vandalism whenever he boarded a Yankee prize. It is known to sea-faring men, that our whaling vessels are generally staunch craft, fitted up in fine style; although statements to the contrary have recently been made by persons ignorant of the facts. After bringing the ship of Capt. Tucker to, and boarding her with a party of his outlaws, the cabin was invaded, and its furniture composed of costly articles of ornament and utility, hacked, hewed and demolished, with their sabres, as had been their custom previous to applying the torch. Every article of value was defaced or destroyed, excepting only an engraving of Gen. Washington, which, owing to some pious or patriotic impulse, was spared. Observing their veneration for this relic, alike dear to all Americans, Capt. Tucker took it down and carried it under his arm to the boat which was in waiting to convey him from his own ship to the Milo. The pirates saw that he cherished it, but did not attempt to molest him in its possession. He carried it on board the Milo, brought it to this city and deposited it with his brother, Capt. Henry Tucker, by whom it has been placed on exhibition in the Pavilion of the Fair. The name of Washington is held sacred even among the Barolongs of South Africa; and it is something of a compliment to the scoundrel Wardell, that he is endowed at least with as much, if no more reverence than they would have entertained towards the same likeness.

New Volume
—OF THE—
Mining and Scientific Press
Issued every Saturday. Each number contains 16 pages and 64 columns (size of Harper's Weekly).

PUBLISHED BY
DEWEY & CO.,
Patent Agents, Publishers and Job Printers,
505 Clay Street, San Francisco.

THE ELEVENTH VOLUME

Of the Mining and Scientific Press commences under advantages most gratifying to its publishers, who assert, with pleasure, that a continued improvement in this journal may be anticipated by its numerous and rapidly increasing readers.

We shall continue to devote a large space in our columns to the various and best methods of treating ores and saving gold and other precious metals in every form, furnishing valuable hints to millmen, prospectors, ollworkers and miners generally, not to be found in any other publication.

New machinery, latest inventions and discoveries, and all matters pertaining to the mechanical, manufacturing and industrial resources of the Pacific States, will receive careful attention.

Stock market reports will be published as received from the official records. Our carefully compiled "Mining Shareholders' Directory" will prove a faithful monitor to parties holding stock, and a desirable record for reference to brokers.

Friends pleased with our efforts in the publication of the Press can render us essential aid by furnishing correspondence and all important information which may come under their observation, and by calling the attention of their neighbors to the commendable features of the paper; the appreciation of which favors will be duly manifested by the constant improvement of our journal.

Specimen copies will be sent free to those desiring to examine the paper before subscribing. Postmasters, Express Agents and News-dealers, acting as our agents, will receive liberal commissions.

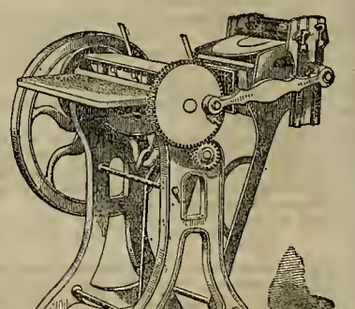
STILL PROGRESSING!

THE OFFICE OF THE
Mining and Scientific Press
was removed, April 8, to the old printing stand lately known as Waters Bros. & Co.'s, southwest corner of Clay and Sansome streets (one block south of our former location), where we have consolidated with a



JOB PRINTING OFFICE,

One of the oldest and best appointed establishments in the city for

CHEAP, RAPID AND FINE PRINTING.

We are well prepared to do good work, and as cheap as any prompt and reliable firm in San Francisco, and will guarantee entire satisfaction to every reasonable individual who may be kind enough to bestow upon us his patronage.

LAW BRIEFS,
MINING CERTIFICATES,
PETROLEUM CERTIFICATES,
BLANK BOOKS,
MINING BLANKS,
BOOKS,
PAMPHLETS,
CARDS,
CIRCULARS,
MINING REPORTS.

Orders from the Interior will receive prompt attention. We shall take care to secure correctness in all work executed for parties out of town. Small packages will be forwarded by mail at our expense.

City customers, or persons visiting San Francisco, are invited to call and examine our specimens, when they will be politely informed of our prices by the Proprietors.

E. D. WATERS, JR., C. W. M. SMITH, } Proprietors. { W. B. EWER; A. T. DEWEY,

Economy in Advertising.—The Mining and Scientific Press is the best and most economical mining advertising medium in this city. Our terms are less than one half the rates now charged by daily newspapers, and the mining community are beginning to appreciate our reasonable rates of advertising. The Press contains, proportionally, a larger amount of mining advertising than any other paper on the Pacific coast. Its character renders it the proper journal for the concentration of mining patronage.

From the Stock Circular of Associated Brokers of the S. F. Stock & Exchange Board.

SAN FRANCISCO, SATURDAY MORNING, August 19th, 1865.

The money market is characterized by great ease and abundance, and capital is readily accessible to borrowers in good credit, at 1¼@1½ ₱ cent. per month, the latter being the nominal bank rate. Some important loans, extending through a period of several years, were made this week upon first-class city property at 1 ₱ cent. per month. Great difficulty is now experienced in loaning funds to be employed for regular business purposes, and upon real estate and other collateral usually preferred by capitalists, and we are likely to witness an easy money market and low rates of interest for some time to come.

Receipts of treasure from the interior mining districts are lighter than usual, this month, and since Saturday last amounted to less than $700,000. The Branch Mint, thus far during the current month, has taken some $1,300,000 for coinage.

The supply of bullion on the market has been rather small, and a good demand prevailed for yesterday's steamer. Gold bars were sold at 830@840, and silver ranged at par to ¾ ₱ cent discount.

Legal Tender Notes continue without animation at the Board, but a fair business is being done all the time on the street at current quotations—74¼@74½c

The Mining Share market was devoid of life early in the week, and with unimportant exceptions nearly every stock was sold at a decline. Since Wednesday, however, a rather better feeling has prevailed, prices are higher, and stocks are less freely offered. A number of city shares have materially improved recently, and are now well held at the advance. Many of these incorporations are judiciously managed and promise so well in the future that no serious decline in the present market value of their stock is feared.

Pacific Insurance still further advanced to $155, at which rate sales were made. San Francisco Gas was sold at $92½@95 ₱ share, and is now held at $94. Spring Valley Water Company was dealt in to the extent of 400 shares at $51¼@51, closing at $51 bid. California Navigation Company rose to $780 ₱ share (ex-dividend), and is now inquired for at that figure.

Gould & Curry was sold at $1,500@1,475, and closed yesterday at $1,475, s 30. The receipts of bullion are fully up to the average of the past few months, and the ores sent to the company's mill are yielding as well as usual.

Yellow Jacket opened at $1,425, fell to $1,305, rallied to $1,330, and sold yesterday at $1,375@1,350; some 52 feet changing hands. During the week ending on the 7th instant, 811 tons of ore were extracted from the mine. About 700 tons were worked (330 tons at the company's mills, and 370 at outside mills), yielding $28,000, or an average of $40 per ton. The new shaft is now down some 285 feet, and at a depth of 290 feet a second station will be opened to correspond with the 360-feet level in the central works. From this latter point, 200 feet south, the winze discloses a face of ore 50 feet in sight. The west cross-cut from the west body, on the 280-feet level, has developed a deposit of red ore 10 feet wide, from which, it is said, 1,000 sacks of first-class ore can be taken this month. The total indebtedness of this company, as shown by their balance sheet on the 5th instant, amounted to $339,699.66, including about $32,000 due in April and July next.

Savage rose from $1,260 to $1,310, and sold yesterday at $1,400. Advices from this mine are more promising. A new body of ore, lying to the west, has been met with in drifting from the shaft in the 1st, 2d and 3d levels, and in the 5th station the ore is said to be improving in quality and to show a larger development. From the different levels some 80 tons of ore are now taken daily, averaging about $40 per ton. The present indebtedness of this company amounts to some $150,000, but the receipts of bullion the current month will probably exceed $100,000, and it is thought that their liabilities will soon be materially reduced.

Crown Point has continued to attract attention, and 150 feet were sold, advancing from $1,180 to $1,310, receding to $1,185, rallying to $1,270, and closing at $1,240@1230. Nevada advices speak highly of recent developments in the north end of the 230-feet level. The cross-cut has opened a vein of good ore, 30 feet in width at that point, and drifting has begun from the shaft in the new level, to strike this deposit at a depth of 300 feet.

Belcher is in less favor, and small sales were made, declining from $930 to $820, and closing at $840 bid. The cross-drifts from the new levels disclose nothing favorable as yet.

Ophir advanced from $370 to $400, fell to $360, rallied to $380, and sold yesterday at $390, at which rates 60 feet changed hands. It is stated that the ores between the 6th and 7th galleries are growing scarce and poorer, and that the cross-cut on the 7th indicates nothing new. A continuance of work in the north mine, between the 4th and 5th galleries, produces about 5 tons of rich ore per day, assaying some $500, and a large lot of waste rock in the old works, between the 4th and 5th stations in the south mine, assays some $65. These deposits, together with the dump pile, which yields a good supply daily, are all it is said, that can be relied upon at present. The present indebtedness of this company exceeds $90,000.

Chollar has been very steadily maintained this week at $510@552, closing at about $515. An assessment of $34 ₱ share was levied on the 15th instant, the payment of which will cancel all the liabilities of the old incorporation.

Potosi has not fluctuated materially, and 127 feet were dealt in within a range of $450@475, closing at $472½. Upon this stock an assessment of $50 ₱ foot was levied August 15th. It will require another of $15 ₱ foot to extinguish the entire indebtedness of the old company.

The debt of the Chollar-Potosi company now amounts to about $205,000, including $80,000 due some time hence on account of the Grass Valley purchase.

Uncle Sam receded from $230 to $190, rallied to $240, fell to $225, and sold yesterday at $215@217; within this range 600 shares were dealt in. Overman fell from $224 to $200, rallied to $235, and closes at about $215. Advices from these claims are meager, but it is expected that a recent crushing of some 60 tons of ore at the Vivian mill will show a better result.

Imperial has been in decided favor, and 850 shares were sold, steadily advancing from $229 to $260 ₱ share, and changing hands yesterday at $270@266. The receipts for the first half of this month from the company's two mills, are unusually large, and amounted to some $60,000 from less than 1,000 tons of ore. The drift east from the shaft (in the new level), at a depth of 600 feet, will, it is thought, reach the body of ore found in sinking from the present working level above, on or about the 1st of September.

Confidence declined from $130 $120, rose to $140, and sold yesterday at $139@140. At a depth of 540 feet the southeast drift has met with a body of rich ore some six feet wide.

Bullion rose to $160, fell to $155, rallied to $163, and closed at $174. North American fell from $31 to $27½, rose to $32½, and closes at $29½. Sierra Nevada was dealt in at $17½@19½, closing at $19. Exchequer was sold at $47½@42, and is now offered at $44. Burning Moscow was sold at $34½@35, and closes at $34.

Daney rose from $42½ to $62½, fell to $55, and sold yesterday at $55@62½. The ores found in the 200-feet level, east of the shaft, two weeks since, still hold out. The same deposit has also been met with during the week, in the 265-feet level, and the vein at that point is said to be six feet wide. It is expected that these ores will extend to the Caney line, some 170 feet east.

The recorded sales of Stocks, since last Saturday, amounted in the aggregate to $949,327.

[From the Daily Fair Press, Saturday, August 12.]

OUR SECOND VOLUME.

On this opening eve we herewith present to the mechanics and merchants of San Francisco, and to all visitors to the exhibition of Industry and Art, the first number of the second volume of the Mechanics' Fair Daily Press. We are under many obligations to our friends and patrons for the confidence they have manifested in our enterprise, as evidenced by the liberal manner with which they have extended to us their patronage. In no other city in the world has an enterprise of this kind been attempted on so large a scale; and yet here we are, on this distant Pacific slope, in a city but yet in the middle of its *teens*, presenting the first number of the second volume of a Daily Fair Press which would be considered respectable even as a commercial journal in any city. We take no credit therefor upon ourselves, but yield the entire meed of praise to the merchants, mechanics and manufacturers of California, who, considering their isolated position and brief term of associated existence, by the common consent of the world, stand unrivalled on the globe for enterprise, energy, liberality, and intelligence.

The paper will continue to be printed at the Pavilion daily, during the continuance of the Fair, and, as last year, will be gratuitously distributed to all visitors. It will be devoted mainly to descriptions of articles on exhibition, and we shall endeavor to make it to some extent a guide to the more interesting groups within the building, and an exemplifier of their peculiarities, whether natural or artificial. We intend that the Daily Fair Press, when completed, shall form as perfect and complete a description of the Exhibition as it is possible to collect within the time and space allotted therefor. Every care will be taken to render it a compilation worthy of preservation, and to that end we shall receive subscriptions for full sets of the volume, to be delivered after the close of the Exhibition, and to be bound as desired by the subscriber, either after the manner of the monthly series of the Mining and Scientific Press, or in the more substantial manner of the regular volumes of that paper, specimens of both of which may be seen at our stand in the Pavilion.

The advantages which the columns of the Daily Fair Press present as an advertising medium must be manifest to all. No other medium can be found in the city so well calculated to arrest the attention of the thousands of strangers who will visit the city and Fair during the continuance of the Exhibition.

[From the Daily Fair Press, Monday, Aug. 14.]

THE AWARD OF PREMIUMS.

There has been much inquiry as to how many premiums were to be offered to exhibitors at the Fair—their classes, kinds, and value; also what kinds of articles will be permitted to compete, and the highest degree of merit which they must possess to take a first premium; also whether the prizes are to be confined to any particular class of articles, to the exclusion of all others; and whether the awards will be made in a spirit of fairness and impartiality?

In answer to the last inquiry, we can answer, that it will be the intention of the Board of Directors to see that exact justice is done. Some of the other questions are answered in their circular, to wit:

First. The Executive Committee have provided gold medals, which will be given as special premiums, to be awarded to such inventions and manufactures of the Pacific coast as shall prove of great practical value to the mining, agricultural, and manufacturing interests thereof.

Second. Silver medals have been provided, which will be awarded as special premiums for domestic inventions and manufactures of superior merit.

Third. The Diploma will be awarded as first premium for superior skill in workmanship and finish of articles exhibited.

Fourth. The certificate of merit will be awarded as second premiums to such articles as show merit.

No premium to be awarded, unless two or more articles of a kind are exhibited for competition.

No premiums will be awarded on articles entered after the 14th inst.

Electricity as an Agent of Defense.—A letter from Toulon, published in a French paper, describes a recent discovery, by which electricity is made to subserve the purpose (but in a more effective manner), of forts and land batteries in defending marine harbors. The letter says: "If ever an enemy's squadron dare present itself before a French port it could easily be pulverized before it could have time to fire a shot. All present at the experiment were convinced of the fact when they saw an old ship-of-war thirty feet wide lifted out of the water, split and sunk in less than a minute at a signal from the inventor. The destructive effects of the machine were so startling that it became evident no iron-plated ship-of-war could resist such a shock. What is very remarkable in this new instrument of destruction is that it is not necessary to wait until the enemy's ship strikes the machine, as in case of the torpedoes invented by the Russians and Americans. The French system is said to be more certain and more expeditious. The electric spark reaches the enemy's ship, and destroys it with the rapidity of lightning."

"Sound!" la, la, fa, me, Sing!—Shakspeare, or somebody else, was right when he said,

> "Music hath charms to soothe a savage,
> Rend an ear or split a cabbage.

No sooner was the sweet nasal twang of maidenly voices heard last night, proceeding from the region of the New England Kitchen, than there was a grand rush for its precincts—for the time devoted to accoustics, in harmony with the fumes of gravy and sour kraut. Quarters rained upon the ticket keeper in astonishing profusion, and all other things were forgotten in the grand *squeeze* of the excited promenaders to gain admittance. The concert hall was a jam, and the entertainments sonorously rich. Those antiquated specimens of moving statuary are bound to succeed in their novel idea. Antiquated in *style*, only, ladies! We pray you, do not misunderstand us. We would not incur the displeasure of those bright eyes, beneath matronly *coiffuers*, for all the good things that are stowed away in your kitchen larder.

New England Kitchen.—To-night, at eight o'clock, the old folks will have a quilting frolic, with Mehitable, Prudence, Charity, Wealthy, Susy, Jemima, Jerusha, Abigail, and all the other charming "sisters" in attendance. After the jolities of this grand event have "subsided," the frames will be removed, and the young 'uns proceed to "shake a foot." Partners can be had for asking; and the fair ones of the short-waists and high combs, expect that visiting gents will not be backward.

The Attendance.—The attendance at the Fair on the opening night, was variously estimated at from fifteen hundred to two thousand persons. On Friday evening, the second night, there was considerable of falling off. But on Saturday night the number increased to a vast multitude—perhaps over three thousand persons.

[From the Daily Fair Press, Tuesday, August 15.]

"Call me Pet Names."—The darling creatures who preside over the *cusisine* of the "New England Kitchen," and receive their feminine prefixes from the delectable times of Cotton Mather, of blessed memory, (may his soul rest in peace!) exhibit in the "gorgeous array" of their persons, a punctilious observance of fashion truly admirable in damsels so young, graceful, modest and tender. The style of apparel which they have adopted, heightens and multiplies their charms. Those short waists—could anything be more conducive to a development of fine physiological points? Those carelessly depending skirts—how rapturously inviting for a contra dance or "pigeon-wing!" Those brogans, with pati-colored rosettes on the instep—observe the elegance they impart to the foot! And what shall not be said of *them* tortoise shell combs—rearing their elaborately carved backs into upper air, like the serrated ridges of timber-dotted mountains! And the prim looks, pinched noses, and scarlet-tinted foreheads—ahem! cheeks of the animated beauties—don't they tell, though, on the hearts of susceptible bachelors? But above all, the *sobriquets*, the "pet names," those are the things chiefly and particularly to admire. Aunt Susy wields the baton and the toasting fork; Cynthiana and Aunt Moy, spinsters, are the spinners; Charity, Abigail, Jerusha, Patience, Dorcas, Sally Ann, Jemima, Dolly, Thankful, Wealthy, Priscilla and Gloriana, make themselves useful as maids of all-work; waiting at table, washing dishes, ogling at the guests, ("want to know!") blushing at the wit-sallies with which they are saluted; ("get out!") and bustling around to make themselves agreeable as a "basket of chips;" ("den tell!") Where, short of the picture gallery, was ever such a galaxy of elegance and refinement in Yankee character to be found? "Call me pet names, dearest; call me pet names."

Frink's Improved Machine for Making Soda.—Visitors to the Fair cannot have failed to notice the highly polished copper cylinders, used as a fountain for making carbonated soda, which occupies a position at the corner near the Daily Fair Press publication office, in the Pavilion. Its beauty is an attraction, and the quality of the soda which it generates, is pronounced superior to all other kinds in healthfulness and flavor. Mr. Frink, by his invention, dispenses with the acid-globe and one fountain, using a generator and one fountain only, instead of a generator and two fountains, as in the ordinary machine, and avoiding all necessity for wasting gas. It has three pumps, and can make double the quantity of soda, and of a purer quality, at less cost than the old style. Its compact form is also an advantage. The entire machine takes up a space of only four square feet, and is portable at little cost and trouble. For saloons, drug stores, and private families it has advantages which must be greatly appreciated by those familiar with the trouble and expense heretofore attending the manufacture of soda. This elegant machine was manufactured in this city, by Graves & Smith, No. 522 Davis street.

Exhibitors, Please Notice.—The Press will be issued daily during the Fair. The advertisements and notices which appear in its columns will pass into those of the weekly Mining and Scientific Press, without additional charge. Exhibitors should notice this fact, and "pass in their checks." The editorial and publication office of the Daily Fair Press can easily be found, from the fact that Mr. Lincoln's statue is pointing directly at it! (*Inter nos.* The publishers had a private understanding with the sculptor *to shape it so*; and he did it!)

Note This Fact.—If an article is worthy of exhibition at the Fair, its peculiar advantages and virtues ought to be explained. The proper way to do this, is through the columns of the Daily Fair Press. Exhibitors and inventors are not always present to answer the inquiries of curious visitors; but a description given through the columns of the Press, satisfies not only those in attendance at the Pavilion, but goes out into the great world, and is seen and read by tens of thousands.

Bear this in mind, gentlemen. You have gone to considerable trouble and expense to place your articles in the Fair. A few dollars more paid for advertising them, will prove the *strength* of the whole game, for it has its return in a golden torrent.

Orders for Job Printing of every kind—hand-bills, cards, etc., if left at the stand of the Daily Fair Press, will be promptly attended to. A hand-bill description of a piece of machinery, or any other object on exhibition, is a great advantage to the exhibitor, a convenience to the visitor, and saves a vast amount of talking in the way of explanations, etc.

A Novel Invention.—A great deal of curiosity is manifested by visitors to the Fair, to know the uses of a large octagon drum, exhibited among the articles belonging to Mr. V. Squarza, of the "Symposium." We would enlighten them by stating, that it is a machine for puncturing the skins of all fruits of the citrous species—such as oranges, lemons, and limes, so as to obtain the essential oil contained in their rinds without piercing the inner pulpy membrane. It is claimed by Mr. Squarza, the inventor, that after the fruit has been so punctured, it will preserve much longer than otherwise. The quanity of oil obtained by this process is greater, and the quality much purer than that extracted by the modes at present adopted, which entirely destroy the fruit for other purposes. In this respect it will effect an immense saving to those who use largely of these essential oils for flavoring liquids. The invention is known as "Squarza's Esseutial Oil Extractor," and claims a San Francisco paternity.

Innocent Soul.—A lady not particularly well versed in mechanics, visited the boiler of the large engine at the Fair, the other evening, and observing the furnace door open, and a blazing fire inside, inquired "if that was the New England Kitchen?" Not quite, Miss Unsophisticated!

Not so Cheap.—In the machinery department of the Fair is a patent boot blacker, which operates with a crank. When the inventor wishes to "show it off," he invites some gentleman to present his foot, that he may give a practical example of its mode of operating. It so happens on such occasions that some officious fellow other than the person to whom the invitation is more particularly addressed, pushes forward and presents his *feet*, in the expectation that he will have his boots blacked for nothing. The inventor good naturedly proceeds to polish off one boot, and when the second is presented, informs the subject of the operation very politely that he is *through*. "But—but" stammers Mr. Officiousness, "how can I go into the Fair with one boot polished and the other dusty?" "Oh!" replies the inventor, "that is not my look-out. My vocation is exhibiting a machine—*not blacking boots!*" The point of the joke is beginning to be understood.

Slow in Motion.—Exhibitors are slow in bringing their goods to the Fair this year. Every day more or less entries are made; but still there is a great deal of space claimed which remains vacant in the Pavilion.

Propelling Machinery.—The two beautiful steam engines in the northeast wing of the Pavilion, intended for the propulsion of machinery, have been erected—the larger by H. J. Booth & Co., and the smaller by the proprietors of the Vulcan Foundry. It is believed that they will afford ample power for all purposes required by exhibitors in the heavier branches of the mechanical department.

Heavy Machinery.—The display of heavy machinery is not so great at the Fair this year as it was last. The number of inventions has not been so great. Another, and perhaps better reason is, that the expense attending such exhibitions is very great. The freighting and handling of large pieces of manufactured iron; their erection into a machine; the attention which such a machine requires in operation; the expense of pounding material, as in the case of a quartz crusher or saw mill for instance, with which to show the working power of the machine, etc., etc., are items of cost which proprietors are not willing to incur, supposing them even to possess the ability.

Lincoln's Statue.—The colossal statue of Mr. Lincoln is the subject of a great deal of criticism—in some cases amounting to uncerbated animadversion. One man finds nothing in it to admire; another, nothing to condemn. Most people think the position constrained; the dress to loose fitting and inappropriate in style; the gesture of the left arm unnatural and impossible; the whole physiology of the figure angular, skeleton-like and repulsive. This kind of criticism is unfair. Mr. Lincoln, it is well known, had no pretensions to beauty, His form was ungainly; his features harsh; his positions awkward. The sculptor never saw him, and performed his work entirely according to the crude ideas derived from photographs and engravings of the murdered President. In the evening, the light shows his statue to very bad advantage and many of those who pronounce against it when thus seen reverse their decision next day. In our opinion the work has its defects, particularly about the "apparel," but it is nevertheless a really creditable performance.

[From the Daily Fair Press, Wednesday, August 16.]

Pacific Straw Works.—Wherever a bevy of ladies is assembled together, manifesting an interest in any work of the mechanic arts, one may rest assured that something is there worthy to be seen. So it is nightly at the Pavilion of the Fair. Between two of the doors leading into the picture galleries, is the department of the Pacific Straw Works, whose place of business is at 603 Market street, opposite the mouth of Montgomery. A couple of gentlemen are in attendance with one of the dies of the establishment, to illustrate the manner in which the jaunty hats worn by the pretty girls, are stamped into shape. The operation is simple, but to the ladies highly interesting; and, indeed, somewhat marvellous even to the gentlemen, whose attention appears to be fully as much absorbed in the study of its manipulations.

A small piece of foundation muslin is taken, after having been saturated with water, spread over one of the iron models or dies, and stamped into a fashionable shape in a moment of time. The die being hollow, has a strong flood of gas-flame poured upon its under side, which dries the muslin, so that when it is taken off, it is patterned and ready for trimming.

The proprietors of the Pacific Straw Works manufacture every article connected with their establishment, and shape their models to suit the prevailing fashions of bonnets and hats, whatever those fashions may chance to be. They commenced business in this city in July, 1862, with some misgivings as to the success with which it would meet; but the demand for all work in their line became so great, and has ever since increased at so rapid a rate, that the works have become a permanency and a necessity to the female portion of community. Besides manufacturing, they bleach, color and finish straw and felt hats and bonnets, and keep constantly on hand an extensive supply of frames, like those we witness shaping in the Pavilion. Such an institution is not only a novelty in a Fair, but a source of pride and indispensable utility to the entire city.

Unmannerly Boys.—The bad boys were out in force last night at the Pavilion, and took very little pains to conceal their rudeness. They formed into bands, and passing through the avenues, robbed the different tables of the cards and circulars of advertisements which they contained, and used them for mischievous purposes. The cards they "shied" at each other, and at the faces of visitors; many of whom were struck, and if not wounded, at least very much annoyed. The attention of the Directors are called to this nuisance. Boys who practice such rude and unmannerly behavior, should either be accompanied by their parents or guardians, excluded altogether from the Fair, or watched, and their vicious conduct restrained, or they will drive off visitors, many of whom were last evening very much disgusted because the juvenile scamps were not checked in their ruffianly proceedings.

The Fountain.—Running water has ever been a symbol to enrich poetry. The mind associates it with green fields, fragrant flowers, shady aleoves, and all that kind of things. It is at least the antithesis of aridity. For this reason, we presume it is, that so many persons prefer to occupy the seats under President Lincoln's statue. There is a cooling influence about the sparkling showers that fall from the jets, and a music in their splashings that arrests the ear of the promenaders, and causes them to linger, and gaze, and become lost in a reflective train of thoughts.

Analysis of Petroleum from Mattole Valley.—The following is the analysis made by Professor Rowlandson of samples of petroleum obtained by the Allen and Sutter company, 145 feet in depth, alluded to in our last weekly number.

Good Burning Oil	77 ₱ cent
Amber Colored light Machine Oil	5 ₱ cent
Dark Colored Machine Oil	4 ₱ cent
Loss and Residue	14 ₱ cent
	100

The burning oil was of a character equal to the best imported, lasting as long and of equal photometric power.

A Large Audience.—The number of visitors to the Fair last night exceeded largely that of any previous evening. The young ladies with pretty faces and kiss-me-if-you-dare hats, are beginning to discover that it is a delightful place of promenade—to see and be seen; the middle-aged, to be amused and instructed; the old to note the many improvements in the arts and mechanics made in the last half century; and the juveniles to romp, and indulge their propensity for innocent mischief. Every one must be more or less profited. Sometimes, to be sure, a fellow runs plump against a creditor; but a little adroitness is sure to serve his turn. People don't go to such places to be dunned, and won't submit to it; that's more of it.

Delays are Dangerous.—A well-known merchant of this city was solicited by an agent to have his life insured, and at once admitted the policy of doing so, and made a promise to do so on his return from Oregon; but, alas! he deferred it too long, for he was on board the Brother Jonathan and met a watery grave. Profit by this sad warning, and insure your life. The advertisement of the North American Insurance Company may be found in another column. Mr. Eaton, who has charge of the business on this coast, will be glad to see you. Give him a call.

Gold Fish.—The fountain has received the addition of several gold fish. They are not so much of a novelty as formerly, on account of the vast number in the market. A few fish of species indigenous to our own waters, and larger in size, would increase the interest attaching to the fountain.

Those who wish to inspect the different articles on exhibition at the Fair, with a view to arrive at their intrinsic merits, should visit the Pavilion in the daytime, when the crowd is not so great.

There was another immense rush of visitors to the Fair last night; a larger multitude of people, we think, than has been present on any previous night.

[From the Daily Fair Press, Thursday, August 17.]

Rebecca, the Cider Tapster.—The 24th chapter of Genesis relates that Abraham, the patriarch, was much disturbed for fear, after his death, his son Isaac should choose a bride from among the Canaanites, where he then dwelt. He was very particular, therefore, in giving instructions to his chief servant to visit his own tribe, and to direct how, when with it, he should deport himself in selecting such valuable piece of "furniture" for the young rogue. In obedience to the oath, the servant took ten camels and proceeded to Nahor, in Mesopotamia. He stopped outside the walls of the city, on the evening of his arrival, near a well of water. It was there Rebecca, the daughter of Bethuel, son of Milcah, the wife of Nahor, Abraham's brother, came to fill her jars, as was the custom of the period, before jaunty hats and crinoline skirts were in fashion. She was "very fair," and not at all proud; for she carried her water jar on her head. After she had filled it, and was about to depart, the wary old fox who was acting as Abraham's emissary, having an eye to the damsel's charms, accosted her, and solicited a drink. Like a good girl, Rebecca let her jar down on her hand, and gave him as much of the aqueous element as his thirst demanded. Her kindness did not end here. She even volunteered to water the camels, and did water them—out of a trough. For these kind offices so generously bestowed, the servant was not ungrateful. He presented Rebecca with a golden ear-ring, half a shekel in weight (equal to four gerah, or twelve and a half cents, in coin; generous messenger!) and two bracelets, worth ten shekels in gold, or about a dollar and eighty cents in greenbacks After thus dipping into his treasury, the servant volunteered, with his suite, to lodge with Rebecca's father. They were kindly received and hospitably entertained. The servant told his story—in Abraham's name—got consent of Rebecca's parents that she should become a spouse to Isaac, and then became really prodigal in the distribution of his presents. (In the meantime he had probably had his "tod.") The upshot of the whole matter was, that he carried Rebecca off to his young master; who, happening at eventide to be loitering near the well Lahai-roi, in contemplative mood, lifted up his eyes, and seeing Rebecca's retinue exclaimed, "*the camels are coming!*" (This was the suggestive origin of the celebrated song of that title, by Bobby Burns—perhaps!)

Well, to illustrate: Rebecca, of the New England Kitchen, who is "exceeding fair to look upon," and Betty, her assistant tapster, "lustrious among the daughters of beauty," preside over the cider department, where pies and apples are also dispensed. They are symbols of the characters in the pleasant scriptnrs story we have been relating. Let them be well patronized; and although *our* Rebecca has already found her Isaac, the liquid she offers is a beverage nutritious in quality, delicious in flavor, and by no means inebriating in its effects.

Visitors! you who compassionate those who "go down to the sea in ships," and return invalids unable to perform manual labor, think of Rebecca at the Fair, and drop a quarter into her hand—for the benefit of the "true Yankee sailor."

The Fat Boy.—Have you seen "Jonathan," the Fat Boy of the New England Kitchen? He is not, like old Wardell's Fat Boy, a sleeper; but rather like Billy Birch's ghost, a "sprightly and healthy goblin;" full of merriment; prolific in antics; a very Puck in girdling the "strained vent of the imagination." You must see this indigenous specimen of a clown. He lacks only the cap and bells to be perfect in his vocation. His great forte is in the Jocko line; animated pantomime; expressive gyration; silent contortion. By all means see Jonathan, and thereby acquire a "memory" to be presented and reproduced whenever and wherever New England Kitchens are the order!

Zeke, a Character.—Dogberry says, that to be a well-favored man is the gift of Fortune; but that "readin' and writin' comes by nature." Now, Zeke, the clown, in the New England Kitchen, is a well-favored man. He is also a genius. No trumpeter of the "Invincible Dragoons" ever sounded a blast with a better echo. The renowned Anthony Van Corlear is eclipsed by Zeke. Even Rhoderick Dhu, of whom it was said

"One blast from out his bugle horn
Was worth a thousand men,"

becomes a second-rate personage when compared to the funny Zeke. He is so fresh, so bewitching, so irresistible! The little boys appreciate you; the ladies admire you; the gentlemen all say, "Bully for Zeke!" We say, "Go it, Zeke!"

A Curiosity.—A fragment of the original Plymouth rock is on exhibition in the New England Kitchen, contributed by Mr. E. I. Barra. The historic interest attaching to such a relic makes it indeed an object to be seen by the *savant* and antiquarian.

A "Down East" Party.—A party of eight couples, all original, dyed-in-the-wool Yankees, sat down in rows, the other evening, to supper in the New England Kitchen. The way the pork and beans were demolished was a "caution" to Moses! And as for pumpkin pies and apple "sass," Doreas, Jerusha, Jeminia and Abigail found their powers completely overtasked in carrying in such kinds of "fodder." If the funds of the Seaman's Aid Society were not particularly benefited on account of the weighty cargoes taken on board; there were some repleted stomachs in the party, and no mistake!

Storming the Kitchen.—If the patronage of the New England Kitchen continues to increase as it has done in the last three nights, Aunt Susan will be compelled to enlarge. The rush was so great last evening, that every available nook of standing room was occupied. As fast as people retired, their places were occupied by others squeezing in. There was an old-fashioned "shindy"—or as modern innovation has vulgarized it, "shin-dig." Zeke, Jonathan, Reuben, Softhead, Betty, Doreas, and others of the chosen brother and sisterhood, "sailed in steep," on the occasion.

1852. 1865.

Thirteenth Year of Publication.

THE GOLDEN ERA.

Founded in 1852.

The oldest Weekly Paper in the State, permanently established, and more widely circulated at home and abroad than any other on the Pacific Coast. In California, the Atlantic States, and throughout the entire field of its great and rapidly increasing circulation, The Golden Era is universally regarded as a Literary and Family Journal of unequalled excellence. Among its contributors are all the best writers on this side of the Continent, and correspondents of distinguished ability in New York, Paris and London.

Liberal Terms to Clubs.

The Golden Era is furnished to CLUBS at the following rates: Three Copies, one year, Ten Dollars; Five Copies, one year, Fifteen Dollars; Ten Copies, one year, Twenty five Dollars. An extra copy will be forwarded, free, for one year, to the person sending a club of five or ten subscribers.

The Golden Era is now enlarged by the addition of eight columns to its pages—and presents fifty-six columns, containing the greatest possible variety of Valuable and Entertaining, Original and Selected Matter, all combining to render The Golden Era a Literary and Family Journal of surpassing interest and attraction; a Welcome Guest in Cottage and Cabin; the favorite at the fireside in City and Country, the most useful, agreeable altogether desirable publication for California readers and their kindred and friends in the Atlantic States, Europe, and elsewhere. Every Household in the Mountains and Valleys, the Cities, Towns, and Mining Camps of California and throughout the Pacific States and Territories, should receive and welcome The Golden Era as a regular weekly visitor.

Serial Romances in The Golden Era.

The most popular Novels of the present day published as Serials, from week to week, in the Golden Era, from advance sheets, simultaneously with their appearance in the English and Atlantic Periodicals.

Among the contributors to the Golden Era are all the prominent writers of Literary Repute in California and on the Pacific Coast, also correspondents and contributors of distinguished ability in the Atlantic States and Europe, comprising an array of Talent and Genius unapproached by any Literary Journal in California, the Atlantic States, or Europe.

IN THE GOLDEN ERA,

"THE FAIR LILIAS;"

Or, "LIFE IN DEATH,"

A New Story, by Pierce Egan, Author of "The Poor Girl," "The Flower of the Flock," "Lady Maud," "The Snake in the Grass," "Such is Life," Etc.

PIERCE EGAN is undoubtedly the most fascinating and attractive Novelist of the age. His stories are eagerly sought for, read and admired by hundreds of thousands in England and America. "The Fair Lilias; or, Life in Death," surpasses, in exciting interest and thrilling situations, all of the productions of the celebrated author, and is Pierce Egan's masterpiece.

THE GREAT SERIAL,

"OUR MUTUAL FRIEND,".....By Charles Dickens.

TO ADVERTISERS.

Best Advertising Medium.—The Golden Era is the oldest Weekly Journal in California, and indisputably enjoys by far the largest circulation in the city of San Francisco and in the interior of the State.

THE GOLDEN ERA

Is universally read in every city, town, village and mining and agricultural precinct in California, and offers unique and unequalled advantages to those who desire to bring their business prominently before the community. Only a limited space is devoted to advertising. All advertising pages are also largely occupied with fresh and interesting reading matter, and no advertisement can escape attention. The charges for advertising are not so large, proportioned to the benefits derived, as those of other papers Liberal terms will be made with those who advertise for three or six months, or by the year.

BROOKS & LAWRENCE,

Golden Era Building,

No. 543 Clay street, near Montgomery, San Francisco.

[From the DAILY FAIR PRESS, Friday, August 18.]

LOW'S GRAIN SEPARATOR.

It is generally conceded that the American people are the most inventive in the world, particularly as relates to the origin of machinery for practical uses and its improvement. In this respect they are the benefactors of the nations, for the product of their genius enriches agriculture and simplifies the processes of labor. The Fair that is now being held, is designed to furnish ocular proof of the rapid strides daily making in this country toward the creation and perfection of everything that is valuable as an implement to develop and elevate the practical arts and sciences. As furnishing a case in point to illustrate this idea, we may refer to Mr. Leonard Low's Grain Separator, a Sacramento invention, and certainly one of the most useful as well as ingenious pieces of machinery in the Pavilion. It is an object of attraction to every one who understands its uses; and from the fact that it has been thoroughly tested, and proved more than adequate to the performance of all the duties for which it was intended, is looked upon as an established fact, only requiring to be well known, to become universally adopted.

The press has passed many deserved encomiums upon this invention, and the stamp of popular approbation has already made it a general favorite. It is quite peculiar in its construction, and consists in a series of sieves, placed one over the other, and arranged around a central shaft, in sets of from two to eight in number, as may be desired, and capable of cleaning from 50 to 250 bushels of grain per hour. The operation of the machine is very simple; the motion being imparted to the sieves by means of a shaft, on which there is a slide crank to regulate the length of the vibratory motion, and which may be readily adjusted. So small is the power required to drive the machine that a belt three-eights of an inch in width will convey power sufficient to clean 7,000 pounds of wheat in an hour. The speed of the machine is regulated by cone pulleys. The wheat is placed in a hopper at the top, from which it is fed into the machine, automically, by means of a telescopic nozzle. Each machine is divided vertically into two or more compartments, called sets, into which the grain is fed equally by cross-bars dividing the flow. Each set may be comprised of a greater or less number of sieves in a set, as may be found necessary to perfect work. The mustard, chess, or other small grain, is first separated from the wheat and automically disposed of; the grain afterwards passes from sieve to sieve throughout the entire series, each sieve taking from the mass more or less of the imperfect grains, until the clean wheat is finally deposited in a proper reservoir at the bottom. There is also a convenient arrangement of raffers, by which the sieves may be simultaneously cleaned of anything choking them, by the simple pulling of a string, which operation may be performed as often as desired without stopping the machine. The testimonials which Mr. Low exhibits are conclusive as to the merits of his separator. We think the invention worthy of their endorsement, and shall here re-produce a couple of certificates, one from Marysville, and the other from Sacramento. Mr A. D. Starr, of the "Buckeye Mills," in a letter dated from Marysville, August 12th, says:

"LEONARD LOW, ESQ—*Dear Sir*:—My flour is certainly worth twenty-five cents per barrel more by having grain cleaned by your machine than it would be by any other I have seen. I can truly say, also, that it is my candid opinion there is not of different make another Grain Separator in this State which can favorably compare or compete with yours. It separates barley and blue pod from wheat to perfection. In fact, to sum all up, it is a perfect Grain Separator, and just what all mills want in this State. This one of mine far exceeds my most sanguine expectations."

Over date of Sacramento, August 10th, 1865, Mr. S. H. Garfield, of the Pioneer Mills, certifies as follows:

"L. Low—*Dear Sir*:—In reply to your request respecting your Grain Separator, we would state that we have had one of them in use at our mill for the last twelve months. We have been to no expense for repairs on the Separator since we have had it in use. It will clean 125 bushels of wheat per hour, and clean it well. It requires but little power to run it, very little attendance, and the waste of grain is but trifling. No reasonable consideration would induce us to part with the machine provided we could not obtain another of the same kind. It works to our entire satisfaction, and we have no hesitation in recommending it to the public."

BROOKS' PATENT BUGGY SPRING.—Directly opposite the entrance to the Pavilion may be seen a small model buggy which is attracting much attention, and the peculiar features of which are connected with the springs upon which the body of the miniature vehicle rests. The eliptical and other steel springs generally used, are here substituted by a simple arrangement of wooden bars, connected with shackles and attached to light spiral springs upon which the weight of the buggy and its load rests, with a large amount of leverage, which gives it great strength and much more elasticity than can be obtained from the springs ordinarily in use. By this device the weight of the load is made to bear at the point where the least strain is brought upon the body of the vehicle, and where it will be found most easy and convenient for the occupant. The spring is entirely concealed from view, and placed so as to render it much less liable to get out of order than those in common use, where numberless small irons and bolts are employed to keep the several parts in place. An attachment of light scroll work may be made to the wood work or braces, giving the vehicle an airy and elegant appearance. The construction of these springs is such as to admit of their carrying great weight. Any further information can be obtained by calling upon the patentee, at 39 Webb street, in this city.

CHANGE OF TIME.—The time of holding the next State Fair, has been changed from the 11th to the 18th of September.

San Francisco Metal Market.

LIFE INSURANCE CO.,

No. 240 Montgomery Street,

SAN FRANCISCO.

The Most Liberal Company

IN THE UNITED STATES.

All Policies Non-forfeitable and Indisputable.

No Extra Charge for Residing in the Territories, or for Traveling to and from the Eastern States.

J. A. EATON & CO.,

Managers of the the Pacific Branch.

Canvassing Agents.

We would call attention to the following named agents of the MINING AND SCIENTIFIC PRESS as gentleman worthy of the countenance of any community which they may visit, and assistance rendered them in their efforts, by friends and old patrons, or our brethren of the PRESS, will be acknowledged as a personal favor to us:—

Mr. Robert Lattimore—Amador and Alpine counties and the State of Nevada.

Thos. Poyzer, of Grass Valley, for Nevada, Yuba and Sierra counties.

A MUSICAL TREAT.—Mr. Willis informs us that he will introduce some new and beautiful music on Saturday night. Among other things which are entirely new, will be a beautiful solo, played by Mr. James K. Kendall, the world renowned clarionet player, from Boston, the brother of Ned Kendall, the greatest bugle player that ever lived. Mr. Willis wishes the visitors to be seated, as many as can, and remain quiet for about five minutes, as a solo so rich and beautiful cannot be well played without perfect quiet. If order can be obtained, the solo will be played at half past nine o'clock.

And in accordance with law and an order of the Board of Trustees, made on the tenth day of July, 1865, so many shares of each parcel of said stock as may be necessary, will be sold at public auction, at the salesroom of Cobb & Sintoa, auctioneers, No. 405 Montgomery street, San Francisco, California, on the twenty-eighth (28th) day of August, 1865, at the hour of twelve o'clock, noon, of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

G. FRANCIS PETRARCHI, Secretary.

au19-td Office, No. 606 Merchant st.

Lancha Plana Copper Mining Company, Campo Seco District, Calaveras county, California.

The Annual Meeting of the stockholders of the above Company will be held on Wednesday, the 6th day of September, 1865, at 10 o'clock A. M., at the office of the Company, No. 326 Clay street, San Francisco.

au12 J. FULLER, Secretary.

Nevada Gold and Silver Mining Company Lander county, Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 16th day of August, 1865, an assessment of fifty cents per share, was levied upon the capital stock of said Company, payable on the 19th day of August, 1865, in United States gold and silver coin, to the Secretary, 402 Front street, San Francisco

Any stock upon which said Assessment shall remain unpaid on Saturday, the 16th day of September, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Friday, the 6th day of October, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

N. C. FASSETT, Secretary.

Office, 402 Front street (up stairs), San Francisco. au19

Santa Cruz Petroleum Oil Works Company—Location: Santa Cruz County, California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 15th day of August, 1865, an assessment (No. 13) of thirty (30) cents per share was levied upon the capital stock of said Company, payable immediately, in United States gold and silver coin, to the Secretary, R. WEGENER, 415 Montgomery street, San Francisco.

Any stock upon which said assessment shall remain unpaid on Saturday, the 16th day of September, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 30th day of September, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

R. WEGENER, Secretary.

Office, 415 Montgomery street, San Francisco, Cal. au19

Santa Cruz Petroleum Oil Works Company—Location: Santa Cruz county, California.

The third Annual Meeting of the stockholders of the above Company will be held at their office, 415 Montgomery street, San Francisco, California, on Tuesday, the 25th day of September, 1865, at 8 o'clock P. M., for the purpose of electing Trustees to serve for the ensuing year and such other business as may properly come before it.

LEANDER RANSOM, President.

R. WEGENER, Secretary.

N. B.—All stockholders who cannot be present are earnestly requested to file their proxies with the Secretary. au13

Southern Light Gold and Silver Mining Company, Reese River Mining District, Lauder County, Nevada.

NOTICE.—There are delinquent on the following described stock, on account of assessment (No. 8) of fifty cents per share, levied on the 15th of July, 1865, the several amounts set opposite the names of the respective shareholders, as follows:

NOTICE TO MINERS.

THE UNDERSIGNED WILL SELL

MINING STOCK

In Incorporated Companies and Unincorporated Mines, in San Francisco District and in El Dorado District, Arizona Territory. It is confidently asserted and believed by most practical miners that Arizona is the richest mining country in the world. Recent developments of these mines are now attracting the attention of capitalists, who have already erected several mills, and more are going there soon. Now is the time to invest to advantage, and obtain the rise that must soon follow. Those wishing to purchase soon can do so, on most liberal terms, by calling on MR. RODNEY CLARK, 338 Montgomery street (room No. 11), San Francisco, or on H. C. SKINNER, San Jose, California.

N. B.—Freight all the way by water at a cost of 4½ cents per pound.

H. C. SKINNER,

San Jose, California.

San Francisco, April 27, 1865. 17q10

Metallurgy.

EUROPEAN METALLURGICAL WORKS,

—AND—

Practical Mining School,

Bryant Street, Between Third and Fourth,

SAN FRANCISCO.

THE Proprietors are at all times prepared to work or test Ores sent to this establishment—either in large or small quantities—by such process as may be found best adapted to their chemical character, after a careful analysis has been made. Test lots of Ore adapted to the smelting process attended to. Sulphuret, pyritous, and the (so called) "rebellious ores," are having especial attention paid to their successful treatment. Assaying in the humid and dry way. Also, refining by cupellation, done at moderate rates.

PRACTICAL MINING SCHOOL.

The proprietors—encouraged by numerous applications from gentlemen desirous of pursuing the study of practical metallurgy—have concluded to admit parties on reasonable terms. Having in their Mill all the necessary appliances for crushing, roasting, amalgamating, smelting, refining and assaying, as also a well extended Laboratory for the analysis of Ores and Minerals, a good opportunity is here offered to acquire a sound practical knowledge of the business.

S. P. KIMBALL, J. R. MURPHY.

NEW USE FOR A SODA FOUNTAIN.—Mr. Frink has claimed for his recent improvement on the Soda fountain, that he could make it propel machiuery; and to redeem his word has introduced on his counter, in the Pavilion of the Fair, a neatly constructed miniature steam engine, with a pipe attachment to his apparatus, and when the gas is let into its cyl inder the motion of the machinery is rapid and perfect. The fountain itself has, from the beginning of the Fair, been a great object of attraction, which is now vastly increased by this new and novel feature.

Mining Notices--Continued.

Any stock upon which said assessment shall remain unpaid on Saturday, the 2d day of September, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 16th day of September, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of the sale. By order of the Board of Trustees.

AUGUST KUNAST, Secretary.

Office, 540 Washington Street, au5

Tip Top Gold and Silver Mining Company,
Silver Mountain District, Alpine county, California.

The Annual Meeting of the stockholders will be held at the office of the Company, No. 410 Montgomery street, San Francisco, on Monday, September 18th, 1865, at 12 M. of said day.

au12-4w J. WARREN CLARK, Secretary.

Office of the United States Gold and Silver Mining Company, San Francisco, Cal.—Location of Mines: in Santa Fe and Ravenswood, Mining Districts, Lander county, Nevada.

Notice is hereby given, that in accordance with a resolution of the Board of Trustees of the above named Company, passed on Wednesday, the fifth day of July, 1865, and in accordance with the by-laws of said Company, a meeting of the stockholders of the above named Company will be held at the office of the Company, No. 605 Clay street, in this city, on Thursday, the tenth day of August next, at 7½ o'clock P. M., for the purpose of authorizing and empowering the Trustees of said Company to sell on or more of the mines belonging to the said United States Gold and Silver Mining Company, and for the purpose of changing the by-laws of the same, and for the transaction of any and all business that may legally come before the meeting. By order of the Board of Trustees.

T. L. BIBBINS, Secretary.

San Francisco, July 5, 1865. jy8-5w

The above meeting is hereby adjourned to the 24th inst., at the same hour and 540 Clay street. By order of the Board of Trustees.

au 12 J. T. PENNELL, Secretary pro tem.

Delays are Dangerous.—Inventors on the Pacific Coast should bear in mind that by patronizing our Patent Agency they can sign all necessary papers for securing patents almost immediately, thereby avoiding the three month's delay requisite in transacting business through Easternagencies.

Union Copper Mining Co. No. 2, Ledge or Claim situated in Copper Canon District, county of Calaveras, State of California.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 5th day of August, 1865, an assessment of one dollar per share was levied upon the capital stock of said company, payable immediately, in gold coin of the United States of America, to the Secretary, at the office of the Company, California street, in the city of San Francisco.

Any stock upon which said assessment shall remain unpaid on the 4th day of September, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on the 23d day of September, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order at the Board of Trustees.

OVE. TOUCHARD, Secretary.

Office, 416 California street.
San Francisco, August 3, 1865. au12

Wisconsin Gold and Silver Mining Company, Silver Mountain District, Alpine county, Cal.

The Annual Meeting of the stockholders will be held at the office of the Company, No. 410 Montgomery street, San Francisco, on September 17th (Sunday)—changed to Monday, September 18th, 1865, at 10 A. M. of said day.

au12 4w J. WARREN CLARK, Secretary.

Whitton Gold and Silver Mining Company, Silver Mountain District, Alpine county, Cal.

The Annual Meeting of the stockholders will be held at the office of the Company, No. 410 Montgomery street, San Francisco, on Tuesday, September 5th, 1865, at 2 P. M of said day.

au12-4w J. WARREN CLARK, Secretary.

Wide West Gold and Silver Mining Company, Silver Mountain District Alpine county, Cal.

The Annual Meeting of the stockholders will be held at the office of the Company, No. 410 Montgomery street, San Francisco, on Thursday, September 7th, 1865, at 2 P. M. of said day.

au12-4w I. S. BROWN, Secretary.

Whitlach Yankee Blade Silver Mining Company, Lander county, Nevada.

Notice is hereby given, that at a meeting of the Board of Trustees of said Company, held on the 22d day of July, 1865, an assessment of ten dollars per share was levied upon the capital stock of said Company, payable immediately, in United States currency, to the Secretary, 402 Front street (up stairs), San Francisco.

Any stock upon which said assessment shall remain unpaid on Saturday, the 26th day of August, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Tuesday, the 12th day of September, 1865, to pay the delinquent assessment thereon, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

N. C. FASSETT, Secretary.

Office, 402 Front street (up stairs), San Francisco. jy22

Wisconsin Gold and Silver Mining Company, Silver Mountain District, Alpine county, California.
ASSESSMENT No. 4.

Notice is hereby given, that at a meeting of the Board of Trustees of said company, held on the 12th day of July, 1865, an assessment of one ($1) dollar per share was levied upon the capital stock of said company, payable immediately, in United States gold and silver coin, to the Secretary, at the office of the company, or to R. H. FOAD, at Silver Mountain.

Any stock upon which said assessment shall remain unpaid on Saturday, the 19th day of August, 1865, will be advertised on that day as delinquent, and unless payment shall be made before, will be sold on Saturday, the 2d day of September, 1865, to pay the delinquent assessment, together with costs of advertising and expenses of sale. By order of the Board of Trustees.

J. WARREN CLARK, Secretary.

Office, No. 410 Montgomery street, San Francisco.

NOTICE.—At the above meeting, assessment No. 1, of 8 cents, levied July 8th, 1863, assessment No. 2, of 10 cents, levied September 19th, 1863, and assessment No. 3, of 50 cents per share, levied June 3d, 1864, were rescinded, and stockholders having paid the same, or any portion, will be credited on above assessment, No. 4 accordingly.

jy22 J. WARREN CLARK, Secretary.

POSTPONEMENT.—The advertisement of stock delinquent on the above assessment is hereby postponed until Saturday, August 26th, 1865, and the sale thereof until Saturday, September 9th, 1865. By order of the Board of Trustees.

J. WARREN CLARK, Secretary.

Office, 410 Montgomery street, San Francisco. au19

Yosemite Mining Company, Oro Fino District, Humboldt county, Nevada.

NOTICE.—There are delinquent upon the following described stock, on account of assessment levied on the 3d day of July, 1865, the several amounts set opposite the names of the respective shareholders, as follows:

Names.	No. Certificate.	No. Shares.	Amount.
Bennett, E D	88	5	$6 25
Bennett, E D	89	5	6 25
Cathers, James	1	100	125 00
Cathers, James	2	50	62 50
Cathers, James	3	50	62 50
Catbers, James	6	10	12 50
Cathers, James	7	10	12 50
Folsom, A	70	25	31 25
Folsom, A	71	25	31 25
Folsom, Mrs R A	87	25	31 25
Hedges, Wm H	49	5	6 25
Hedges, Wm H	60	15	18 75
Hedges, N M	91	35	43 75
Hanson, Chas	86	50	62 50
Potter, Theron	111	5	6 25
Pottor, Theron	112	5	6 25

And in accordance with law, and an order of the Board of Trustees, made on the 3d day of July, 1865, so many shares of each parcel of said stock as may be necessary will be sold, at public auction, by Maurice Dore & Co., No. 327 Montgomery street, San Francisco, on the 19th day of August, 1865, at the hour of 1 o'clock P. M. of said day, to pay said delinquent assessment thereon, together with costs of advertising and expenses of sale.

S. O. PUTNAM, Secretary.

Office, No. 402 Front street (up stairs), San Francisco. au5-8w

"O. T. N."—These are the initials on the flag raised over the *Bulletin* publication office when the paper is receiving dispatches.

"What do they mean?" inquired a chap of a bystander, the other day, as he stood puzzling his brain for a correct interpretation.

"Why, the meaning is very obvious," replied the gentleman addressed, who is something of a wag, and felt a little piqued at the irregularities of the wires; "they mean *Overland Telegraph from Nevada, to be sure!*"

That was satisfactory. "Greeny" remembered that the line, for some time past, had not succeeded in getting dispatches much beyond that point.

THERE are three coal mines in the vicinity of Jackson, Michigan, one of which employs over 1,000 miners, and has five miles of drifts and galleries under ground.

"Say, why should man for thirst be given
If not for wine bestowed by Heaven
To quench such drought as mine?
Without it, I'm a fish on land,
A barren heap of parching sand—
Then give me joyous wine."—*Trinkkied.*

Delicacy of flavor, exhilaration without intoxication, and every other desirable property belonging to the richly fermented Juice of the Grape, are to be found in the "Gerke Wine," from the celebrated Bosquejo Vineyard, Tehama county.

There is no wine produced in California that can bear comparison with this, and it would be difficult to find a European wine, of the same class, that can surpass it.

The vintage of 1862 is now offered for sale, in quantities to suit, by the Agent of the vineyard,

A. S. LOWNDES,

Basement of the New York Hotel, southwest corner Battery and Commercial streets, San Francisco. 20v10-qy

OIL WELL BORING.

J. SEVENOAKS,

Contractor

For Well Boring and Erecting all kinds of Machinery connected therewith.

Having had extensive experience in boring for oil in Pennsylvania, Canada and elsewhere, I feel confident of being able to give entire satisfaction. Persons desirous of making contracts as above, or wishing information with regard to oil indications, etc., will please address me at the office of the "Mining and Scientific Press," San Francisco, or to my personal address, Box 1229 San Francisco. 2v11

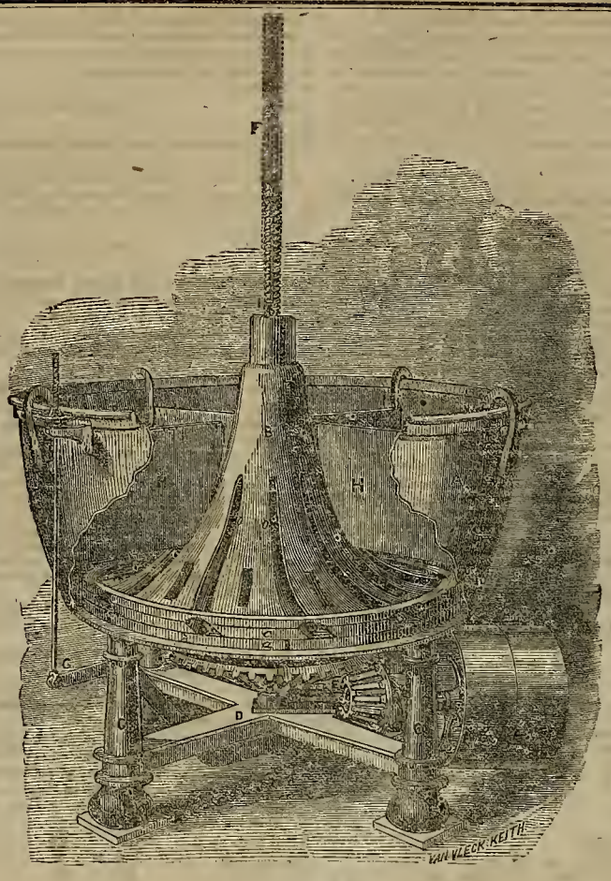
The claims of this Company consists of SIX HUNDRED AND FORTY (640) ACRES, situated on Kellog Creek, in the Marsh Creek Mining District, Contra Costa county, Cal.

One thousand (1,000) shares of the contingent fund is offered at the low price of ONE ($1.00) DOLLAR per share, full paid, all the stock being unassessable. All who wish to purchase, or make any enquiry concerning the Company, will please call on the Secretary,

J. M. BUFFINGTON,

2v11 Corner of Sansome and Washington streets.



THE EXCELSIOR

GRINDER AND AMALGAMATOR.

In the engraving herewith presented, A represents the Rim of the Pan; B, Muller; C, Legs; D, Cross-Frame; E, Gearing; F, Screw; G, Lever; H, Dash-Boards; I, Key; *a*, Dies; *c*, Shoes, and *o*, Openings,

The relative grinding capacities of "The Excelsior" Grinder and Amalgamator, of the Flat Bottomed Pan, and of the Conical Pan *when properly constructed*, are respectively 177, 98 and 110.

That is, the respective mullers being of the same diameter, same weight, same hardness, and running at the same velocity, "The Excelsior Grinder and Amalgamator" will reduce one hundred and seventy-seven tons of ore, the Flat Bottomed Pan ninety-eight tons, and the Conical Pan one hundred and ten tons to the same degree of fineness in the same time.

The wear to the Shoes and Dies at their grinding surfaces in the Excelsior Grinder and Amalgamator, is perfectly uniform, thus securing eveuness of reduction to the pulp, as well as steadiness of motion to the muller. Uniform wear of the grinding plates has been attained in no other than that of the Tractory form—nor can it be.

Another property of excellence in this machine is that the metal or substance to be amalgamated passes *direct* from the grinding surfaces into the quicksilver; thus excluding the possibility of its becoming coated with any foreign substances, after having been burnished. It is truthfully said "that the Tractory-formed Pan as a Grinder has no equal, and as an Amalgamator no superior."

As a whole, it is far superior to any other pan in use.

MANUFACTURED AT THE

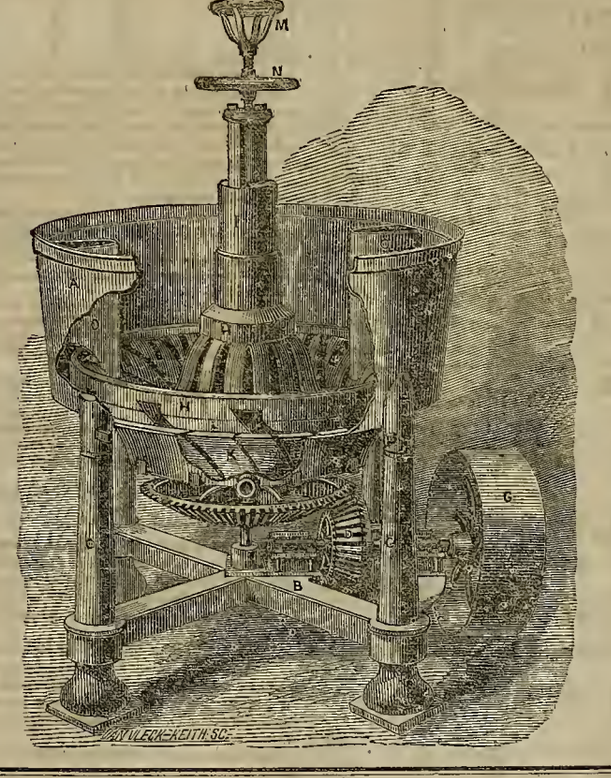
Union Iron Works and Golden State Iron Works,

WHEELER & RANDALL, Inventors.

The undersigned having had several years of experience in practica quartz mining operations, will ever take great pleasure in furnishing parties interested in mining and machinery any desired information which they may possess.

WHEELER & RANDALL.

SAN FRANCISCO, June 13, 1865.



THE

WHEELER & RANDALL

Grinder and Amalgamator.

In the engraving herewith exhibited, A represents the Rim of the Pan; B, Cross Frame; C, Legs; D, Gear; G, Driving Pulley; H, Muller; I, Driver; K, Dies; L, Shoes; M, Hand Wheel; N, Jam Nut, and O, Wings or Guide Plates.

The attention of the Public is respectfully called to these facts:

1st. That the Mechanical work accomplished by differently formed grinding plates, having the same diameter, weight, hardness, and revolving at the same velocity, is as follows, to wit:

The Mechanical Work of plane, circular plates of the usual ring form, is ninety-eight.....98

The Mechanical work of conical plates of the most approved form, is one hundred and ten.....110

The Mechanical work of Tractory-formed plates, as introduced in the invention of Wheeler & Randall, is one hundred and seventy-seven.....177

That is, the Tractory-formed grinding plates will reduce one hundred and seventy-seven tons of ore, the conical grinding plates one hundred and ten tons, and the plane circular grinding plates ninety-eight tons, to the same degree of fineness in the same time. Those using this invention certify that they thoroughly reduce five tons of ore, as it ordinarily comes from the wet battery, per day in each pan, four feet diameter, the muller making sixty-five revolutions per minute.

2d. That as a whole, the Wheeler & Randall Grinder and Amalgamator is one of the most simple, compact, substantial, convenient and efficient pans in use.

☞ Patent applied for.

SAVE YOUR BOILERS AND FUEL.

ONE-EIGHTH OF AN INCH OF DEPOSIT ON THE fire surface of a boiler takes THIRTY PER CENT. of the steam generating power from that boiler, and, of course, wastes thirty per cent. of the fuel; and, what is a greater misfortune, it keeps the water from the plates and flues, causing them to scorch, blister and burn, destroying the boiler, and too often human lives.

I Have a Compound For Sale

That I have used with complete success in every instance, and without delaying the running of machinery, or injuring the boilers in any manner, and at a cost of five dollars the boilers can be made as clean as when they were new.

Machinery.

ATTENTION, MINERS!

LINSCOTT'S PATENT
CHAMBER DRILL.
Great Improving in Blasting.
W. B. LAKE

Has taken the sole agency for the manufacture and sale upon the Pacific Coast of this valuable article, the object of which is to cut a chamber at the bottom of an ordinary drill-hole (as will be understood on reference to explanation of cut), giving more than double the effect in blasting.

D is the shaft of drill, forty-five inches in length. B represents the cutters extended after a blow has been given. The lower portion of B is a guide plate ¾ inch thick, holding the cutters in place and allowing them to glide in and out freely, the surface of the rock preventing their falling out and securing their return. When closed the edges of the cutters protrude about 1.16 inch only. As the drill descends the force slide A strikes the bottom of the hole and a slight blow drives its wedged shaped head, C, upward, forcing the cutters upward and outward by double acting wedge power. Face of the cutters 1¾ inches in length, diamond edged. There are but four pieces in all, two of which, the cutters, are detached.

Price of one drill with two sets of cutters, $35. Extra cutters, $5 per set.

Persons wishing further information about the working of this labor and money saving article, will please send for circulars containing full particulars, which will be furnished gratuitously upon addressing W. B. LAKE, General Purchasing and Advertising Agent, Room 28 Government House, San Francisco. 2v11

HANSCOM'S CRUSHERS,

Made in sizes suitable for Breaking Quartz for Batteries; Rock for macadamizing or concrete; Copper Ore for sacking, sampling, or concentrating; also, for crushing Quartz for Arastras and Grinders. The small sizes make a most efficient Crusher for Prospectors, and are arranged to be run by Hand, Horse, Water or Steam Power. For further information address W. W. HANSCOM.
1 Golden State Iron Works, San Francisco.

Hepburn & Peterson's
AMALGAMATOR.

THE SUBSCRIBERS WOULD CALL THE ATTENTION of the Mining Public to their Reducer and Amalgamator, and also to their Separator for reducing and separating the mineral from

Gold and Silver Ores,

Manufactured and exhibited at the Vulcan Iron Works, Nos 137 and 139 First street, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phœnix Mill, etc.

☞ This Amalgamator may be seen in operation at the European Metallurgical Works, Bryant St. bet. 3d and 4th. Illustrated in the Mining and Scientific Press, April 9th, 1864. HEPBURN & PETERSON.
nov8-3m

NOTICE TO MINERS.

NEW QUARTZ MILL.

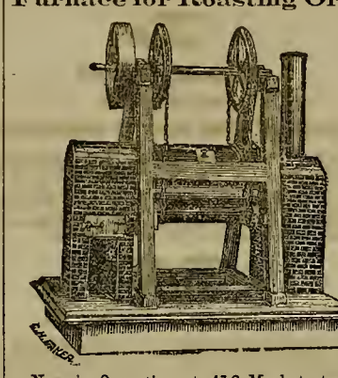
THE ATTENTION OF ALL ENGAGED IN MINING IS called to Fanchery's unrivaled Mining Machines, consisting of his celebrated Turbine Water Wheel, which took the First Premium at the Mechanics' Fair at San Francisco for 1864; his Crocodile Quartz Crusher; his Pulverizer; and his Improved Freiberg Amalgamating Barrel; altogether forming the most complete and effective Quartz Reducing and Amalgamating Mill now in use. This mill can be put up at less cost, run with less power, and accomplish more work, than any other now in use.

B. Fauchery and F. Genard

Having established a Quartz Mill and Metallurgical Works, are now prepared to crush, roast, amalgamate, assort, cupelate, and give correct analysis of ores. We are also prepared to give our attention to the building and constructing of Quartz Mills and Furnaces, and give directions for working Mines; and also to instruct persons in all branches appertaining to Mining Works, at No. 25 Fremont street, near Market, Railroad Foundry building.

F. GENARD, Metallurgist. B. FAUCHERY, Engineer,
24v9

WM. BRUCKNER'S
Furnace for Roasting Ores.



Now in Operation at 416 Market street.

This Furnace, which is portable, and can be carried on muleback, undertakes to roast without employing any labor whatever for the operation of stirring, which is accomplished by machinery that may be driven by steam or any other motor. It consists of an iron cylinder, which, being suspended by chains, in rotating mixes and stirs the ore, by an internal apparatus, quicker and more perfectly than can be done in any other furnace hitherto known in metallurgy. It can be applied to any kind of ore, and the rapidity and perfectness of its operation, the great saving in fuel, and the entire saving of the labor usually required for stirring the ore, together with the small cost of constructing it, renders this furnace a most

Economical and Practical Invention.

The Furnace may be had of two sizes—one being nine feet in length and holding fourteen hundred pounds, and the other six feet in length, and holding eight hundred pounds. One horse power is required to drive the machinery of the larger sized furnace, and three-fourths of a horse-power for the smaller size. Parties wishing to erect such furnaces will please communicate to

W. BRUCKNER,
5v10 No. 416 Market street, San Francisco.

BLAKE'S
QUARTZ BREAKER

Is now extensively used for breaking hard masses of
Quartz or Ores
To a size suitable for stamps. These machines are patented, and are in practical operation in

CALIFORNIA, AUSTRALIA, WASHOE, ENGLAND, FRANCE,
—AND—
THE ATLANTIC STATES.

These Machines, or circulars containing further information regarding them, may be obtained of the undersigned.
Address,
BLAKE & TYLER,
Box 2077 San Francisco Post Office.

CHAS. T. BLAKE, Idaho City. E. TYLER, Michigan Bluff. WM. P. BLAKE, San Francisco.
4v10

VARNEY'S
PATENT AMALGAMATOR.

These Machines Stand Unrivaled.

For rapidly pulverizing and amalgamating ores, they have no equal. No effort has been, or will be, spared to have them constructed in the most perfect manner, and of the great number now in operation, not one has ever required repairs. The constant and increasing demand for them is sufficient evidence of their merits.

They are constructed so as to apply steam directly into the pulp, or with steam bottoms, as desired.

This Amalgamator Operates as Follows:

The pan being filled, the motion of the muller forces the pulp to the center, where it is drawn down through the aperture and between the grinding surfaces. Thence it is thrown to the periphery into the quicksilver. The curved plates again draw it to the center, where it passes down, and to the circumference as before. Thus it is constantly passing in a regular flow between the grinding surfaces and into the quicksilver, until the ore is reduced to an impalpable powder, and the metal amalgamated.

Setters made on the same principle excel all others.—They bring the pulp so constantly and perfectly in contact with quicksilver, that the particles are rapidly and completely absorbed.

Mill men are invited to examine these pans and setters for themselves, at the PACIFIC FOUNDRY,
1v1 San Francisco.

THE HAMMER QUARTZ MILL.

[PATENT APPLIED FOR.]

This Machine is now complete and ready for sale. In constructing it, our aim has been to produce a light, cheap and economical Crusher—one adapted to mining on a small as well as on a large scale.

The elementary principle on which it operates is that of the stamp—the only one really reliable and economical.

But the stamp has many serious disadvantages, among which are its great weight and small velocity; the great power required to run it; difficulty in feeding properly; imperfect discharge, and the necessity of crushing wet, or the annoyance from dust in crushing dry.

All these difficulties are obviated in our machine, and the percussive blow of the stamp retained, with the further advantage of its being a drawing or grinding one.

We give to our hammers such absolute or relative weight and velocity as we choose—just such as to effect their purpose and no more—thus securing the qualities of the natural hammer blow.

The feed is self-adjusting and uniform, and as fast as the ore reaches the required degree of fineness (which depends upon the fineness of the screen or sieve used), it is instantly discharged, so that there is no packing of the ore under the hammers.

The mill crushes dry, with no more dust than that incident to feeding, which is trifling.

As the only support of the mortar is a single post set into the ground, the machine can be put in place at slight expense.

The size now being built weighs about 1,800 pounds complete; the heaviest piece not weighing over 275 pounds. It is driven by half a horse-power, and crushes from three to ten tons per day of twenty-four hours per day, according to the character of the rock and the fineness to which it is reduced.

PRICE,.....$800.

Larger ones will be furnished if desired.

We invite an inspection of the Mill now in operation adjoining the Foundry of DEVOE, DINSMORE & CO., on Fremont street, between Market and Mission, San Francisco.

Office, No. 11 Court Block, San Francisco, Cal.
21v10 RIX & LOGAN.

ATWOOD'S
Self-Regulating Windmill.

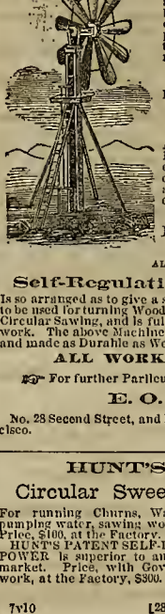
This Windmill is the most perfect self-regulator yet invented, and is capable of being adjusted to any desired speed. Manufactured at

222 Mission Street, North side, below Beale,
SAN FRANCISCO.

N. B.—We also manufacture DICKERSON'S SELF-REGULATING MILLS; also, Rotary and Stationary Mills of different styles and prices, varying from $50 to $500 each; also round and square Water Tanks made to order.

222 Mission street, below Beale. 5

HUNT'S
IMPROVED WIND-MILL.



THIS WIND-MILL IS RAPIDLY taking the place of all other Mills on the Pacific Coast. These Mills are so simple in their construction, that when once built, they can be put in order by almost any person; and when once in order they will run for years without repairs.

Prices, from $50 to $1,000.

ROUND AND SQUARE WATER TANKS BUILT TO ORDER.

HUNT'S PUMPS

Are admitted to be the best in the Market for Wind Mills, being built expressly for that purpose. They can be set, and taken apart with a common wrench, and are very easily repaired.

HUNT'S ENDLESS CHAIN
HORSE POWER
For Sawing Wood.
ALSO, THE
Self-Regulating Horse Power

Is so arranged as to give a steady motion, and is calculated to be used for turning Wood, Iron or Brass, also for Scroll or Circular Sawing, and is fully equal to Steam for any light work. The above Machines are built of the best materials, and made as Durable as Wood and Iron will make them.

ALL WORK WARRANTED.

☞ For further Particulars see small circulars. ☜

E. O. HUNT,
No. 28 Second Street, and 108 & 112 Jessie Street, San Francisco. 26-3m

HUNT'S PATENT
Circular Sweep Horse-Powers,

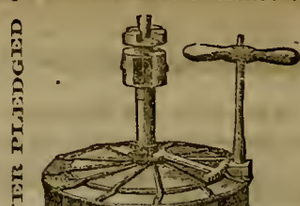
For running Churns, Washing Machines, Grindstones, pumping water, sawing wood, and other light machinery. Price, $100, at the Factory.

HUNT'S PATENT SELF-REGULATING TREAD HORSE-POWER is superior to any machine of the kind in the market. Price, with Governor, all complete to set to work, at the Factory, $300. Manufactured by

E. O. HUNT,
7v10 [28 Second street, San Francisco.

Equal to the Best Overshot Wheel

POWER PLEDGED



IN EXISTENCE.

LEFFEL'S
AMERICAN DOUBLE TURBINE.

The DOUBLE TURBINES, so long expected, have arrived at last, and orders can now be filled. We have a large supply of the different sizes, from 20 inches to 20¾. That we may know the proper sized Wheel you require, measure your water in the following way: Take the width of the stream, the average depth, and the distance it flows in a minute.

All the Wheels already in use give universal satisfaction. For particulars send for a Circular.

The above Wheel will be exhibited during the Fair of the Mechanics' Institute, where all may see it and hear its merits explained. This Wheel is especially adapted to mining purposes. It is light, and can be easily packed into the mountains. Wheels weighing from 100 to 300 pounds will yield from 10 to 40 horse-power under a head of 25 or 30 feet. They are the cheapest wheel to set up known, as they are so arranged as to produce the greatest power possible from the water used.

Come and see them, or send for a Circular to

LEFFEL & MYERS,
4v11-1f Care RICHARDS & MCCROKEN, San Francisco.

TO QUARTZ MINERS.

Hinkle's Centrifugal Pulverizer and Amalgamator!

THE ATTENTION OF MINERS IS RESPECTFULLY requested to HINKLE'S CENTRIFUGAL PULVERIZER AND AMALGAMATOR, now manufactured and to be seen in operation at the NOVELTY IRON WORKS of Mr. E. T. Steen, Nos. 37 & 39 Fremont street, between Market and Mission streets.

This machine is the best in the State for the purpose of Pulverizing and Amalgamating ORES. The whole machine, made entirely of Iron, will not exceed One Ton, and no piece of it will exceed 200 pounds, which makes it very convenient for transportation to remote districts. It will work Two Tons of Rock per day.

Mr. Hinkle, who is running one of the machines, is an experienced Amalgamator, and will receive Ores at the above named place, and extract the metals and furnish assays for all persons wishing the same. The Subscriber manufactures a HAND MACHINE for Miners engaged in prospecting, which will work 60 pounds of ROCK at a time, and which will weigh about 175 pounds.

The Pulverizer and Amalgamator works Rock of the size of a grain of corn to an impalpable powder. Apply to

PHILIP HINKLE,
At the Novelty Iron Works, Nos. 37 & 39 Fremont street.
15-1m

BAUX & GUIOD'S
Separator & Amalgamator

Is the most important improvement in mining machinery ever introduced. It was awarded the FIRST PREMIUM at the San Francisco Mechanics' Fair for 1864, where it proved itself to be the best Separator and Amalgamator among all the competitors. Constructed on principles which combine SCIENTIFIC KNOWLEDGE WITH PRACTICAL EXPERIENCE, these Pans extract more gold and silver from their ores than any others in use, as a few hours trial will demonstrate. Mill men will find it to their advantage to employ these pans as Separators, in addition to the ordinary Amalgators now in use, and to re-work their old tailings.

The cost of these pans is inconsiderable, and their structure is such that they can be readily separated in parts convenient for packing on mules. Among the many advantages possessed by BAUX & GUIOD'S Pan, are the following: The trifling cost for attendance; Its small cost; Its portability; The large quantity of pulp it can operate upon in a given time; It may be worked even weeks without stopping, as it is constructed to work continuously; The complete thoroughness of the separation of the rock from the metals and the trifling power required to work them; They can be attached to any ordinary crushing apparatus.

We have the pleasure of referring parties interested to the following parties, who have our Pan in use: Jefferson Mining Company, Bowman's Ranch, Nevada county; The French Mill, Nevada City; Crall's Gravel Cement Works, Nevada county; Waltman's Chlorination Works, Nevada, Cal.; Gold Hill Quartz Mill, Washoe.

Manufactured at the Vulcan Iron Works, Miners' Foundry and San Francisco Foundry, San Francisco, and at Heuch & Thom's Foundry, Nevada City.

For further particulars, or to see this Pan in operation, call on or address

J. B. BAUX,
Fremont Street, near Mission, adjoining the San Francisco Iron Works, San Francisco. 4v2-6tf

HENDY'S

IMPROVED BLOW-PIPE.

This Convenient Helpmeet

— TO THE —

ASSAYER, CHEMIST, DENTIST, JEWELLER, PROSPECTOR AND MILLMAN,

Can now be procured, at the Patentee's price, by sending your orders, by mail or otherwise, to the

Office of the Mining and Scientific Press.

This article was more fully mentioned in the PRESS of April 15th, 1865. Since that time, however, Mr. Hendy has made a further improvement by attaching a rubber hose between the mouth-piece and the pipe, enabling the blower to change his position without disturbing the direction or constant accuracy of the current on the object upon which it is turned. The main portion of the blow-pipe is made with a joint, at which a valve is placed, which is opened when the operator blows and closed immediately when he ceases. By this arrangement the little bag or bladder is readily filled at a single breath, and with very little exertion. When so filled, a continous current of air is forced from the nozzle of the pipe by the more contractive force of the gutta percha. This force is uniform until the air is very nearly exhausted. The current may be easily varied or entirely cut off by gently pressing the fingers upon the neck of the bladder above the nipple to which it is attached.

Price, Complete.....$5.00.

HELMBOLD'S

FLUID EXTRACT BUCHU

For Non-Retention or Incontinence of Urine, Inflammation or Ulceration of the Bladder or Kidneys, Diseases of the Prostrate Gland, Gravel, Brick Dust Deposits, Dropsical Swellings, Organic Weakness, Debility, Female Complaints, Etc.

H

HELMBOLD'S

FLUID EXTRACT BUCHU

— AND —

Improved Rose Wash

Will radically exterminate from the system Diseases arising from Habits of Dissipation, *at little expense, little or no change of diet, no inconvenience or exposure;* completely superseding those *unpleasant and dangerous remedies, Copaiba and Mercury,* in curing these diseases.

E

USE HEMBOLD'S

FLUID EXTRACT BUCHU

In all Diseases of the Urinary Organs, whether existing in MALE OR FEMALE, *from whatever cause originating, and no matter of how long standing.* It is pleasant in its taste and odor, IMMEDIATE in action, and more strengthening than any of the preparations of *Bark or Iron.*

Those suffering from *Broken Down or Delicate Constitutions, procure the Remedy at once.*

The reader must be aware that however slight may be the attack of the above diseases, it is certain to affect his *Bodily Health, Mental Powers and Happiness.* If no treatment is submitted to, Consumption or Insanity may ensue.

All the above diseases require the aid of a diuretic.

Hembold's Extract Buchu

IS THE GREAT DIURETIC.

L

HELMBOLD'S

HIGHLY CONCENTRATED

Compound Fluid Extract Sarsaparilla,

For purifying the Blood, removing all diseases arising from excess and imprudence in life, chronic constitutional diseases arising from an impure state of the blood, and the only reliable and effectual known remedy for the cure of Scrofula, Scald Head, Salt Rheum, Pains and Swelling of the Bones, Ulcerations of the Throat and Legs, Blotches, Pimples on the Face, Tetter, Erysipelas, and all scaly eruptions of the skin, and beautifying the COMPLEXION.

M

NOT A FEW

Of the worst disorders that afflict mankind arise from the corruption that accumulates in the Blood. Of all the discoveries that have been made to purge it out, none can equal in effect HELMBOLD'S CONCENTRATED EXTRACT OF SARSAPARILLA. It cleanses and renovates the Blood, instills the vigor of health into the system, and purges out the humors which make disease. It stimulates the healthy functions of the body, and expels the disorders that grow and rankle in the Blood. Such a remedy, that could be relied on, has long been sought for, and now, for the first time, the public have one on which they can depend. Our space here does not admit of certificates to show its effects, but the trial of a single bottle will show to the sick that it has virtues surpassing anything they have ever taken.

B

Two tablespoonsful of the Extract of Sarsaparilla, added to a pint of water, is equal to the Lisbon Diet Drink, and one bottle is equal to a gallon of the Syrup of Sarsaparilla, or the decoction as usually made.

The above Extracts are prepared on purely scientific principles—in *Vacuo*—and embody the full strength of the ingredient entering into their composition. A ready and conclusive test will be a comparison of their properties with those set forth in the U. S. Dispensatory.

O

HOW TO USE THE REMEDIES.

In Diseases of the Blood, Humors on the Face, or any and every part of the body, use Extract of Sarsaparilla, applying to Pimples and all external Humors or Eruptions the Improved Rose Wash.

Use the Extract Buchu for all diseases requiring the aid of a diuretic, except those of the Urinary Organs, such as Gonorrhœa and Gleet: in these use the Extract Buchu, and inject with the Improved Rose Wash.

L

☞ THESE EXTRACTS HAVE BEEN ADMITTED TO USE IN THE UNITED STATES ARMY, and also are in very general use in all the STATE HOSPITALS AND PUBLIC INSTITUTIONS throughout the land, as well as in private practice, and are considered as invaluable remedies.

Brandreth's Vegetable Pills.—This medicine, of enduring efficacy, is justly prized as a corrector of all disorders of the stomach and bowels, the common symptoms of which are costiveness, spasms, loss of appetite, sick headache, giddiness, sense of bloating after meals, dizziness of the eyes, drowsiness, and cramping in the stomach and and bowels. These symptoms being suffered to remain, a torpid state of the liver supervenes, and all the horrors of dyspepsia are experienced. Every function of the frame is to a certain extent prostrated; but a little perseverance in the use of BRANDRETH'S PILLS will ever restore the system from this state of misery. Two or three doses will convince the afflicted of their salutary influence. The stomach will speedily regain its strength, a healthy action of the liver will soon take place, and instead of listlessness, heat, pain, and jaundiced appearance, activity, strength and renewed health, will be the blessed result. Brandreth's Pills are sold at 25 cents per box, enveloped in full directions. Purchase none unless my private Government Stamp is on the box. See upon it "B. Brandreth" in white letters.

QUARTZ OPERATOR'S

HAND BOOK.

A Book for Every Intelligent Prospector, Shareholder, Miner and Machinist.

ZENAS WHEELER AND P. M. RANDALL,

Authors and Publishers,

BOUND IN CLOTH—144 PAGES, DUODECIMO.

THE QUARTZ OPERATOR'S HAND BOOK is presented to the public as a carefully prepared epitome of all that is valuable for the practical operator in the mine and mill. We have here all the most necessary hints and directions for testing and assaying the ores of the various minerals; an explanation of chemical terms; a brief and intelligible description of the numerous processes for roasting ores, and the extraction of metals from their ores by amalgamation and otherwise.

The work also contains an original and highly interesting discussion of the theory and differently formed grinding plates, as applied to the reduction of ores—a subject not only of special interest to the scientific reader, but also practically of the highest importance to every quartz miner.

Professor Silliman, of Yale, and Hodgson, of the College of California, having examined this discussion, as submitted to them by its author, Mr. Randall, previous to the compilation of this work, speak of the same as not only mathematically correct, but also as of great practical value. Messrs W. R. Eckart, Jr., Engineer, (late of U. S. N.,) and W. M. Belsbaw, assayer and superintendent of the S. T. M. Co., to whom the entire work was submitted while passing through the press, speak of the same as one of high practical importance to quartz miners and millmen generally.

No work has been offered to the mining public of California which contains so much valuable information, condensed into so convenient a space as is here presented. In its preparation, much care has been taken to secure brevity, conciseness, and simplicity—in fact to make it a complete and reliable QUARTZ MINER'S HAND BOOK.

The Table of Contents of this book will be found on page 415 of the MINING AND SCIENTIFIC PRESS of July 1st, 1865.

Sold by booksellers generally. Price by mail, postage paid, $1.25. Address "Wheeler & Randall, at the Mining and Scientific Press Office, San Francisco."

☞ For sale by Carriers and Newsdealers. ☜

It is Impossible for editors to know ALL the merits and demerits of their correspondence, consequently the sender must not receive the opinions of our contributors as our own. Intelligent discussion is invited upon all sides and the evidence of any error which may appear will be received in friendship and treated with respect.

American and Foreign Patents.—Letters Patent for inventors can be secured in the United States and foreign countries through the MINING AND SCIENTIFIC PRESS PATENT AGENCY. We offer applicants reasonable terms, and they can rest assured of a strict compliance with our obligations, and a faithful performance of all contracts. For reference, we will furnish the names of numerous parties for whom we have obtained patents during the past two years.

Favorable to Inventors.—Persons holding new inventions of machinery and important improvements, can have the same illustrated and explained in the MINING AND SCIENTIFIC PRESS, free of charge, if in our judgment the discovery is one of real merit, and of sufficient interest to our readers to warrant publication.

Payment in Advance.—This paper will not be sent to subscribers beyond the term paid for. The publishers well know that a good journal cannot be sustained on the credit system.

During the Fair

We hope the readers of the MINING AND SCIENTIFIC PRESS will look with leniency upon any degression they may observe from the usual contents and make-up of our journal. Correspondents will also please bear patiently with the crowded state of our columns in giving full reports of the Exhibition.

OUR PAPER BY EXPRESS.—Owing to the fact of Wells Fargo & Co requiring publishers to pay 2½ cents per copy in advance on papers sent to subscribers in the interior we are obliged to make our subscription terms by express $6.50 per annum.

THE STONES OF THE TEMPLE.—The marble stones which composed Solomon's Temple were said to be forty cubics long twelve thick and eight high. Suposing a cubic to be eighteen inches, which is the lowest estimate, they would be sixty feet long, eighteen feet thick, and twelve feet high. And supposing a cubic foot of marble to weigh 2,707 ounces, one of these stones weighed 2,752,038 pounds and 12 ounces. And supposing one man to be able to raise 200 pounds, it will require 13,760 men to raise one of these, and also a little boy who could raise 38 pounds 12 ounces. And suppose one man to require a square yard to stand upon, it would require 2 acres, 3 roods, 11 perches and 12 yards for them to stand upon while raising it, besides a place for the little boy to stand. What floats must have been necessary to carry them across the sea to Joppa! And what kind of teams, as well as wagons, do you suppose they had to carry these stones from Joppa to Jerusalem, which is about thirty miles, and a mountainous country? And what skill was necessary to square and dress these immense stones, so that when they were brought together they fitted so exactly that they had the appearance of being one solid stone.

A WAVE on which many a poor fellow has been carried away is the wave of a lace-edged cambric handkerchief.

ALL notibility in its begianings was somebody's natural superiority.

THE Richmond *Christian Observer* is the only religious newspaper now alive in the Southern States.

PUT no faith im a new promise based on the breach of an old one.

[Written for the Mining and Scientific Press.]

Colorado Gold Processes.

EDITORS MINING AND SCIENTIFIC PRESS:—In a number of your valuable journal, some weeks ago, I noticed an extract of a portion of a "Circular" on some mining processes and machinery that I issued here about March 1st, 1865, but which was incorrectly copied, so as to injure its merits. In your issue of May 20th and the week previous, there are notices of "Messrs. Crosby & Thompson's Process and Machinery." As theirs and my own are somewhat similar in parts, and as I am *partially* acquainted with those gentlemen and their experiments, with your permission I would like to make some comments on their ideas and your statements, and some explanations of the points involved in my own inventions, *pro bono publico*.

You remark of Messrs. C. & T's process, that their assumption that gold exists in nature as a sulphide, or in a volatile condition, capable of being condensed, "is without a shadow of proof," and that "their experiments appear to have been confined to concentrated sulphurets, nearly free from quartz." To this I answer, that most of the workable ores in this country are of that description, containing usually sulphides of gold, silver, copper, and often lead, all mixed together, with fine quartz crystals, and some quartz uncrystalized. In elaborate experiments on these ores three years ago, I found in nearly all of them *mineral oil*, as well as sulphur and arsenic, in quantity, and other base metals. By roasting pulverized ores in a common fire to a red heat, and then plunging them red hot into cold water, I separated the copper by precipitation on the bottom of the iron vessel, and floated off the mineral oil. In some instances, where the heat was at a low red temperature, upon panning down the powdered ore after the above treatment, I found the gold in fine scales at the bottom of the pan, and though yellow, yet quicksilver would not touch them until I re-heat them with soda or alum, when they lost their yellow hue and amalgamated without difficulty. Now that proved to me that there was a chemical coating over the gold in *such* pyritous ores that by no process or machinery in use at present, unless it might be Mr. Crosby's, or those of my own invention, described partially in the accompanying "Circular," could the precious metals therein contained be saved. So I conclude that most of the *gold* in Colorado ores exist therein in the state of a sulphide. [We do not see the reason for any such inference.—En. M. and S. PRESS.]

The silver-lead ores here are much easier *treated*, but scarcely anything can be saved from them by our mills, as they manage them by the wet process; for the lead, oil and manganese therein fouls up the quicksilver and battery plates in an hour or two, so that no metal can be caught or saved upon them, though these ores are from five to ten times as valuable in gold and silver as the more common gold ores. In my experiments on these I found that roasting them when pulverized with one-twentieth of soda, by weight, would so soften and decompose their constituent particles, that no difficulty was afterward found in grinding gold, silver and lead *all* into amalgam with mercury, and separating the lead from the other metals by the explosive process practiced in Germany, which I had not read or heard of, but re discovered. I also found that sulphur was a great aid in combustion, and that alum was nearly as good as borax for a flux; further more, that the three used together properly, in but small quantities, would flux the most stubborn of these stubborn minerals, and *these latter ores* as freely as desired, precipitating all their precious contents directly, with but a moderate heat.

I am confident that with a furnace similar to the one described in the following extracts from my "Circular," that the rich ores of Nevada, as well as some in this and other sections, can be made to flow streams of precious metals, especially with, (and in most instances without) a hot air blast.

"There is a class of ores known as argentiferous galena, which, in addition contain yellow pyrites or sulphates of gold; these are the richest ores in Colorado, containing often from five to ten dollars per pound in gold and silver, and a quantity of lead, which has hitherto prevented the collection of the more valuable metals; in most cases, however, they will yield to the treatment last described; if not, they can be readily *fluxed* by the following receipe, at an expense of a few cents per pound, which is not much when the yield produced thereby is often as many dollars:

"Intimately mix with the pulverized ores one-tenth to one-twentieth by weight, each, of bi-carbonate or nitrate of soda and rosin; place the compound in a cone-shaped, boiler iron or other suitable crucible, and when brought up to a white heat pour into a cavity in the middle of the mass similar and equal quantities by weight of pulverized borax and sulphur, or the same of sulphus and double of alum, which will produce *an immediate flux*, precipitating the contained metals in a button of more or less purity; the whole time required being governed by the quantity operated on, and the amount of lead in the ores treated."

"The Smelting Furnace designed for the Fluxing Process, is a circular stone structure lined with fire-proof brick or gneiss, with dome top and tall chimney. It has doors near the bottom for fuel, and another opening near the top of the contained crucible, for the purpose of charging it. The crucible may be made of boiler iron in the shape of a sharp cone, and if of large size, is to be provided with one or more flues through its length. It is to be placed vertically in the centre of the furnace, with but a few inches space around its rim or larger part; its top has half-section iron covers, hinged to the rim; a vessel to contain hot water is placed above the crucible, with faucet, to detach slag from the crucible. The crucible has an opening in one side, near the bottom, with carved doors to fit, opening outward into a square case passing through the furnace walls to take out the refuse charges through. A curved iron pipe of an inch or two in diameter, screwed into or rivited on the bottom of the crucible, and passing out through the furnace wall serves to draw off the melted ores when sufficiently refined, into cold water, or into moulds. The inner opening of the pipe is protected from stoppage by a convex iron plate scolloped round the edge, covering the bottom of the crucible and supported an inch or two above it on proper bearings. The pipe is to closed by a clay plug, externally."

With regard to the losses in working gold ores noted in your article of May 20th, I am confident that in the wet process it occurs from the intimate pulverization of the contained ores in part, which renders them too light to settle in muddy water; and also from chemical coating on the particles of gold, as well as from their peculiar scaly form, like the finest of mica shivers in appearance. In the dry process I differ with you, and think it chiefly occurs in "sublimation;" for all my experiments in nearly ten years of gold mining lead me to the conclusion that gold in the flourcy state will go wherever quicksilver does or can, even under the volatilizing pressure of heat. To obviate this *great* waste—from double to three and five times the quantity saved by most mills—as assay of the *untreated* ores show—I have invented, and am seeking a patent on a peculiar condensing and purifying apparatus, to be attached to all furnaces of quartz mills, which I think will fully overcome this difficulty.

Your remark that "the employment of revolving iron cylinders, and revolving tables with stirrers have been tried time and again, and thrown aside," is probably true of what *has been* in times past, and your subsequent comment that the "peculiar arrangement" of Messrs. C. & T's "cylinder, etc., must be of great value" for the purposes designed, "if they will stand the attacks of the sulphur," I fully coincide with. In one set of my machinery I have adopted a "revolving iron table with stirrers," as the very best roasting apparatus for finely pulverized ores that could be devised. I enclose it above a circular furnace and cover it with a close jacket, with smoke flue through the centre of jacket, with a damper therein, thereby economizing the fuel and heat, and by means of the stirrers, securing an even and thorough roasting at a very low temperature. The ores are admitted near the centre, and pushed off the circumference red hot into a copper vessel of cold water, for purposes before explained. Warm air is admitted freely through the discharge sluice, and fresh cold air can be admitted as desired, either at the furnace, passing over the plate and ores, warm or cold, by side openings, thus securing any quantity of the much desired oxygen so necessary in the desulphurizing process.

For perfect, lasting and rapid pulverizing machines I refer you to the following further extracts from my "Circular:"

"An improvement in the common Stamp Mill, so it can do work either wet or dry, dry being preferable in these processes in their first stages, viz: Making the dies mortar shaped, rounding the stamps to match, cutting a slot from one die or mortar to another half their depth, placing them on a descending grade from the feeding place, so as to compel the ores to pass successively under all the stamps—say from six to twelve in a battery—thus doing more than double the work per hour and twice as well as at present under flat stamps. Battery enclosed tight to keep in the dust.

"A Pulverizer receives the crushed ores from the battery, and passes them through it by gravity, to the roasting furnace. The Pulverizer consists of an iron trough from six to ten inches wide and as many feet long, set with a pitch of fifteen to twenty-five degrees, and provided with five or six iron rollers of twelve to sixteen inches diameter, all geared to roll the ores towards the lower end of the trough. The bearings of the rollers have springs and set screws attached, by which any degree of fineness may be given to the ores. This machine is covered like the battery."

With regard to *smelting* the richer mineral ores I will add that the inexhaustible beds of nitre, soda, alum and sulphur, as well as salt, so often found between the Rocky Mountains and the Sierra Nevada range, seem to have been specially placed by nature in close proximity with the mineral wealth they are destined at no distant day to assist in working out of its crude form in the mine, preparatory to its preparation for the use and convenience of man.

What dwellers in this great mineral basin and its mountain ranges need above everything else, at the earliest possible day, is the entire completion of the Pacific Railroad directly through the centre of this great tract, so that the mines can obtain machinery and food at reasonable rates at their homes. Then will the civilized world be utterly astonished at the outpouring of the treasures of American industry, from a region of country twenty years ago thought to be utterly worthless to mankind in general, with, perhaps, a few Humboldt exceptions.

J. A. HITCHINGS.

Denver, Colorado, June 9, 1865.

Descriptive Catalogue

—OF THE—

INDUSTRIAL EXHIBITION

Of the Mechanics' Institute, 1865.

CONTINUED.

612 John Daly, San Francisco: five Models of Boats.

262 O. W. Easton, San Francisco: lot of Mineral Specimens [See cat. minerals.]

263 L. D. Hoyt, San Francisco: one Soda Apparatus.

264 J. F. Fugazi: one case Perfumery.

265 Hansbrow Pump Co., San Francisco: twelve Pumps.

This exhibition consists of twelve pumps—three each of his double-cylinder, mining, deep well and famous challenge pumps. These pumps are of various sizes, from two to eight inches in diameter of cylinder, and are all substantially mounted, packed and ready for work. Hansbrow's pumps are so well known to this community that nothing can be said in this connection to add to their fame. His famous challenge pump is well known the world over, as having distanced all competitors, and won the medal at the Great World's Fair in London in 1860. It has one other merit in a San Francisco exhibition—that of being a California invention.

266 Craig, Golden & Young, San Francisco: one California made Hearse.

This is a very superior specimen of workmanship, elegant in finish and substantial in character. This exhibit affords the most indubitable evidence that there is no necessity for Californians to go East to purchase anything of this kind. Our own mechanics are fully competent to gratify our most artistic taste in this direction.

270 P. Kelley, San Francisco: one case Cal. Boots and Shoes.

An examination of this case and the several others which adjoin it must satisfy every observer that San Francisco is not behind any city in the world, in either skill or taste, in this line of manufacture.

271 Briguardelo, Michaevello & Co., San Francisco: three cases Macaroni; twenty-four small boxes Macaroni.

This is a fine exhibition of a most useful product, manufactured in San Francisco. Maccaroni and vermicilli, in all their various forms, are made of a very superior quality of flour. The flour employed at this establishment is made from Taganrog wheat, imported expressly for their use from the neighborhood of the Black Sea. The process of manufacturing the article is quite complex and difficult to be described. The article is extensively used by the French, Italians and Germans; not so much by Americans or English, although it is an exceedingly cleanly and nutricions article. It is now made as successfully and of as good quality in San Francisco as in the best factories of Italy. The display at the Pavilion is extensive, elegant and tasteful.

274 Bradshaw & Co., cor. California and Sansome streets: two cases Matches; one lot Matches in tin, California manufacture.

A fine exhibition of California manufacture, showing the blocks of wood first split, one way only, into long sheets; other blocks split also crosswise, and ready for dipping, then the plain sulphur match, and finally the friction match complete, all ready either for the stealthy incendiary to light his midnight torch, or the prudent housewife her fire for the preparation of the morning meal. These matches are variously put up in large or small parcels. For distant transportation they are put up in large tin boxes, and carefully inclosed, air-tight, for safety from outside fire or accidental self-combustion.

275 G. P. Kimball & Co., San Francisco: Doctor's Phaeton; Pic-nic Wagon.

This phaeton is a very superior vehicle, light, neat and easy, just the vehicle needed for the purpose for which it has been constructed. Near by it is a substantial piece of workmanship, without any pretensions at display; but highly suggestive of pic-nics and family parties, and such happy times as those in which we all delight to sing, "Wait for the Wagon." Mr. Kimball is the inventor of "Kimball's patent goose-neck trucks," etc., one of the most convenient vehicles for draught ever introduced to the public.

276 Will & Frink, San Francisco: two cases Cutlery; two Patent Hotel Annunciators.

This firm have made a very fine display of cutlery, manufactured by themselves. Some of the knives are very beautifully ornamented, and deserve special notice. The Hotel Annunciators are of Jackson's patent, for which Will & Frink are the sole agents for California.

277 W. M. Butler, San Francisco: one Base to Dentists' Chair.

278 Goodwin & Co., San Francisco: one Parlor Set, in green, gold and brocatelle, consisting of twelve pieces; one Library Set, in leather—ten pieces; one Side-board; one Etagre; one patent Chair; one rosewood Chamber Set, six pieces

280 V. S. W. Parkhurst, San Francisco: two Store Locks, Miles' Patent.

This lock was invented at Nashua, N. H., and is manufactured by the U. S. Combinntion Lock Co., Springfield, Mass. The exhibitor asserts that there are 3,375 combinations in this one lock, and that people who use it are not in danger of being robbed by burglars or dishonest clerks and servants, from the impossibility of getting the lock open, unless one knows exactly how to do it, which knowledge the owner alone possesses.

283 Adolph Hecker, San Francisco: one Foot Lathe.

284 J. L. Ney, 14 Montgomery street, San Francisco: two Wax Figures; eight pieces of Cloth; four Mantillas.

285 Hirshfeld & Moritz, San Francisco: Gents' Wig in glass case.

286 J. Strelitz & Co., San Francisco: lot of Coffee and Spice.

288 Wm. Ludeman, San Francisco: case Meerchaum Pipes.

289 E. C. Brooks, San Francisco: one Child's Buggy, with Brooks' Patent Spring attached.

Directly opposite the entrance to the Pavilion may be seen a small model buggy, which is attracting much attention, and the peculiar features of which are connected with the springs upon which the body of the miniature vehicle rests. The eliptical and other steel springs, generally used, are here substituted by a simple arrangement of wooden bars, connected with shackles and attached to light spiral springs upon which the weight of the buggy and its load rests, with a large amount of leverage, which gives it great strength and much more elasticity than can be obtained from the springs ordinarily in use. By this device the weight of the load is made to bear at the point where the least strain is brought upon the body of the vehicle, and where it will be found most easy and convenient for the occupant. The spring is entirely concealed from view, and placed so as to render it much less liable to get out of order than those in common use, where numberless small irons and bolts are employed to keep the several parts in place. An attachment of light scroll work may be made to the wood work or braces, giving the vehicle an airy and elegant appearance. The construction of these springs is such as to admit of their carrying great weight. Any further information can be obtained by calling upon the patentee, at 39 Webb street, in this city.

291 Gus. Reis, San Francisco: samples of Silver Ore from Mexico. [See cat. mineral-.]

292 James Steele, 521 Montgomery street: sample crude Petroleum, from Noble's well, Mattole, Humboldt Co., Cal.

293 Knowles & Clarke, San Francisco: one case Dental Specimens.

294 Rubber Clothing Co., San Francisco: twenty eight samples Rubber Clothing; one roll Rubber Sheeting; four Cushions; two Life Preservers; one Chest Expander.

295 McDonald Bros., San Francisco; lot Cedar Boards.

These boards were sawed at Chase's Mills, corner of Market and Beale streets, and are what is called Spanish Cedar. This article of lumber is becoming of considerable importance to this city and State, and is now largely imported from Mexico. It is largely employed in finishing off our first-class buildings, stores, banks, etc., and can scarcely be distinguished from Spanish mahogany. It is also used in large quantities by our furniture manufacturers, and is enabling them to compete quite successfully with importers in their line, and by means of it they will soon effectually drive nearly or quite all foreign and Eastern furniture from the California market. This class of lumber can be had, at all times and in any quantity, of Messrs. Macdonald & Co., the exhibitors.

296 V. Cushing, San Francisco: two Excelsior Pumps.

These are double-acting suction and force pumps, invented in San Francisco, and patented by W. D. Hooker, May, 1865. The vacuum and discharge chambers are cast in one piece, separate from the pump barrel, to which they are attached by four common bolts; by the removal of the bolts the pump is readily taken apart without disconnecting the chambers.

297 Society Natural History, San Francisco: lot of specimens from Big Trees. [See cat. minerals.]

298 Hungerford & Hendy, San Francisco: one Prater Concentrator.

This machine is designed for concentrating ores, and works upon the principle of the difference of specific gravity in the ores submitted to its operation. The machine is fed, near its circumference, by a conical distributor, when by a rapid vibratory motion the lighter particles are caused to separate from the heavier, and work towards the central orifice of discharge; the heavier, which consists of gold, amalgam or sulphurets, is retained at the circumference; the free gold is easily taken out as an amalgam, and the sulphurets removed from time to time as they accumulate, for any subsequent process. This machine was exhibited a year ago, since which time it has been somewhat modified and improved; particularly by the addition of the bars, which may be noticed as radiating from the centre, just upon the surface of the water, where they are placed for the purpose of creating such a kind of agitation as is calculated to cause the precipitation of any such fine particles of quicksilver as may be floating upon the surface. This machine is being rapidly introduced into various portions of the mines.

299 Josiah Hendy, San Francisco: two Blow Pipes. [See cat minerals.]

These blow-pipes are constructed with valves, by means of which a small India rubber bladder is filled with air from the mouth, which, by the contractive force of the bladder, is thrown out of the small orifice of the blow-pipe in a continuous stream. This flow of air is also held under the control of the operator by means of his finger, which, when pressed upon the neck of the bladder, either reduces the current or entirely cuts it off, as may be desired.

301 J. A. Bauer, San Francisco: one case Preparations—gold, silver and copper. [See cat. minerals.]

302 A. Hunter, San Francisco: one case Sulphurets. [See cat. minerals.]

304 W. S. Thompson, San Francisco: one Family Carriage.

305 C. A. Fletcher, San Francisco: three suits Boys' Clothing; one Boys' Coat; one Boys' Cloak.

306 A. Graham, Puca Straits, W. T.: one piece Coal. [See cat. minerals.]

307 W. R. Frind, San Francisco: lot of Mineral Specimens. [See cat. minerals.]

308 James Longshore, San Francisco: two Trunks; two Valises; four Carpet Bags. The Valise glass case is entered for competition.

All the articles in this exhibition are of California manufacture. Mr. Longshore is one of the pioneers in California manufacturing industry. His goods are generally noted for their durability, style and superiority of finish. The interior arrangement of his trunks is generally very superior. Mr. L. is himself a practical workman, and by his individual enterprise and energy has introduced into this city an important branch of industry, and built up a good and paying business for himself.

309 Logan & Co., San Francisco: one case Fancy Goods.

310 Wm. Harriman, San Francisco: two Top Buggies.

These buggies are from the Carriage Repository of Wm. S. Thompson, 749 Market street.

311 G. W. Gibb & Co., San Francisco: one case California manufactured Colors.

These colors are all manufactured at the Pacific Color Works, in this city, and from minerals obtained on this coast. The yellow ochre is obtained from Mariposa county, the new senna from Santa Clara, rose lake from Guaymas. Bone ash or burnt bones are used for making a black color. Dry colors and furniture polish are also exhibited. The Pacific coast appears to be unusually productive in material for mineral paints.

314 John Panie's, San Francisco: one Marble Mantel Piece.

This mantel-piece is manufactured from the celebrated Vermont Statuary Marble, which is considered equal, if not superior, to any other marble on the continent. The beauty, chasteness and finish of this piece of workmanship is worthy of especial notice.

315 Thos. Varney, San Francisco: one Amalgamator.

This is one of the pans which was involved in the famous "Varney-Wheeler pan case," which recently occupied quite a prominent position in our courts. The pan on exhibition is of working size, and is geared up to its exact working speed when on duty at the mill. These pans are known, on the Pacific coast, wherever quartz mining is carried on to any considerable extent. The principle on which these pans are constructed, and their mode of working, is too well known to the public to need any special description at this time.

317 Mrs. Col. Coffee, San Francisco: six Indian Dolls.

These curiosities were picked up on the San Bernardino desert, near an old rancheria, and are the work of Indian women. It will be noticed that they are dressed in the Mexican style. The manner and style of their getting up is worthy of especial observation. Their faithfulness to nature could scarcely be excelled, even by white fingers.

318 Horace Collier, San Francisco: one Fly Trap.

319 G. K. Porter, San Francisco: four cases Boots.

321 J. Joseph & Co., San Francisco: one boys' Zouave Suit.

322 Josiah Hendy, San Francisco: drawing and plans of Hendy's Gang Circular Saw Mill; two Circular Saw Guides.

324 Thos. H. Morrow, San Francisco: one case Gravel Specimens, from the American North San Juan Co., Nevada Co., Cal. [See cat. minerals.]

326 J. M. Beath, San Francisco: one Quartz Grinder.

This grinder consists of a square box, in which is placed a cylindrical cone of iron, which is made to revolve horizontally upon its axis. This cylinder is formed, as it were, of a series of bars of iron, held together much after the manner of a section of grate bars, the openings, however, placed at an inclination of about 45 degrees from the centre of motion. As this cylinder revolves, two wings are made to shut down upon it from either side toward the centre. The box is filled with pulp of the usual fineness and consistency of that which is placed in the ordinary pans. By the rapid motion which it is found can be communicated to this machine, it is capable of doing a large amount of work, and, as a triturator, in a most effectual manner. Its construction is such that it does not necessarily require the rock to be stamped as fine as is needed by the ordinary pans. This machine is now coming into quite extensive use.

328 San Francisco and Pacific Refinery: samples of Sugar.

This exhibit consists of various kinds of raw sugars, together with the manufactured article in loaves, crushed and pulverized, and samples of syrups. The display is very tasteful and highly creditable to that important manufacturing establishment.

331 Dewey & Co., Mining and Scientific Press Job Printing Office, cor. Sansome and Clay streets, San Francisco: one doz. Quartz Operators Hand Book; four bound volumes Mining and Scientific Press, as specimens of newspaper printing.

The attention of visitors is called to this exhibition of the bound volumes of the MINING AND SCIENTIFIC PRESS, copies of which can be had at the office of publication, corner of Clay and Sansome streets, or by application at the publication stand of the DAILY FAIR PRESS, in the Pavilion. The "Quartz Operator's Hand-Book" can also be had at the same places.

333 W. B. J Kenney, cor. Sacramento and Montgomery streets, San Francisco: six new Mammoth Fountain Pens; six Book keeper's Pens; six Bank Pens; six Corresponding Pens; six Mammoth Pens; six Accountant's Pens; six Gents Revolving Pens; three Ladies' Tablet Pens.

The "New Superior Fountain Pen," as it is called, in this collection, is especially worthy of notice. The fountain being placed on the back of the pen, is thereby kept out of the way of the paper, and the ink will, by its own gravity, *fall* into the pen, instead of having to be drawn *upwards*, as in the other "fountain pens." It is claimed that the Superior Fountain Pen will hold fluid enough to write two pages of foolscap by one dip of the pen.

335 Devoe, Dinsmore & Co., San Francisco: sixteen piece Grate Bars, W. W. Tupper's Patent.

The chief superiority especially claimed for this grate is, that its trnss, or main support and strength, is independent of the grate bars themselves, and consequently not affected by the heat or expansion of the grate surface. The air openings of the grate sections are also so formed as to best maintain their original form under the expansive action of heat; any one or more of the sections can also be readily replaced when desired, with but little trouble, and no interference with any other section. The grate can neither warp, bag down nor break. It is claimed that it will make a larger percentage of steam, do more service with less weight of metal in the grate, than any other in use.

336 Bargion & Johnson, San Francisco: one model Rock Crusher.

This invention is entirely new, having never yet been put into practical operation. It is extremely simple in its operation, yet very difficult to describe without a diagram. It consists, first, of a cylinder, oscillating upon its centre, with an arm projecting upward, at the top of which is fixed a slide-box with a crank, by which the oscillating motion is given to the cylinder. This cylinder is suspended in a frame upon its axis, having two corrugated rubbing faces. There are then two oscillating dies, one upon either side of the cylinder, swung also upon their axis, and within and supported by the frame, and oscillated by means of a shaft running through the lower part of each die, both being connected by an angular arm with the axis of the cylinder, which arm may be seen upon the outside of the frame. The oscillation of the lower part of the dies is obtained by a crank fixed in the cylinder axis, immediately below the centre of oscillation, which gives the dies their crushing (oscillating) motion, the same being less than the sixteenth of an inch, through which small space all the rock put into the machine must pass. The rock passing immediately between the two motions, receives the pressure of the dies acting upon the cylinder, by which it is very finely and rapidly pulverized. The levers referred to are constructed of wrought-iron, which enables the inventor to obtain a large amount of strength, with a very small weight of iron. Both mullers and dies are so constructed that the crushing surfaces can be renewed when too much worn for effectual service; and as they gradually wear away, that abrasion is taken up by means of keys, which may be adjusted as often as necessary, and without even stopping the machine. This crusher is double-acting, being fed upon both sides, thereby allowing of no loss of motion—an important consideration in the amount of work which may be done. The machine, as a whole, is made compact and durable, and of comparatively little weight, in comparison to its efficiency.

337 Wm. Trumbull, San Francisco: lot Horse Collars.

These collars represent all the various styles and qualities, from the substantial manufacture for the heavy draught horse, to the neat and elegantly made patent leather collar for the light buggy or more elegant carriage.

338 James Longshore, San Francisco: two Valises; two Carpet Bags.

339 L. C. Hunter, San Francisco: specimens of Lava from Sandwich Islands. [See cat. minerals.]

341 E. T. Steen, San Francisco: one Steam Engine.

It has been the effort of the maker of this engine to so combine its materials as to obtain the greatest strength with the least weight of metal. It is of twenty-five-horse power, and no piece, except the fly-wheel, weighs over 550 pounds. It can be put up right or left hand without altering a single piece in its combination. The piston requires no adjusting, is always steam-tight, and will not cut the cylinder. It is worked with Reynolds' patent cut-off, which, it is claimed, effects a saving of from twenty to fifty per cent. of fuel, and also operates as a perfect regulator.

343 Wm. M. Butler, San Francisco: one Barber's Chair.

345 A. Grimm, San Francisco: samples of Hair Rejuvenator.

348 H. J. Booth & Co., San Francisco: one Russia Quartz Screen; one Woodward's Steam Pump.

The quartz screen is exhibited just as it came from the punching machine, without being rolled, showing the excellent workmanship and the superiority of the working of this machine.

The principal points of advantage claimed for these pumps is simplicity of construction, facility of access to all the valves, durability of all the working parts, and small amount of space occupied. The pumps are designed and constructed so as to allow of being used to drive machinery; they require but a small amount of power. As to their success, no further comment is needed than the sincere statement that they are in use by most of the best mills throughout the country, and by Government ships generally.

349 W. R. Eckart, Union Iron Works, San Francisco: one Cut-off Valve Indicator.

This invention consists of a silver indicator for showing the position of Moyers' cut-off, (the kind in general use,) relative to that of the link motion or variable stroke of the main valve. Mr. Eckhart claims that this has never before been accomplished by any mechanical contrivance. The machine is extremely fine in construction and appearance, but can be fully understood only by a practical engineer or machinist.

350 Caleb M. Sickler, San Francisco: set Stove Furniture; twenty-one Milk Cans; two Measures, all California make; one Cylinder Boiler; two Stoves; one Putnam's Wringer.

The stove, furniture, milk cans and measures are of a California manufacture.

351 Vulcan Iron Works Co., San Francisco: one double piston Steam Engine.

This engine was manufactured by the Vulcan Iron Works company. It is designed to supply a larger power with a light weight of material for convenience of transportation. By the use of two pistons in one cylinder, a high speed of piston is obtained, with perfect safety and steadiness of motion—equal to double the power of single piston engines of the same diameter of cylinder.

The steam being admitted between the pistons, drives them apart with equal force; and again being admitted to both ends of the cylinder at the same time, and by the same movement of the valve, it drives the pistons towards each other again with equal force. These two forces being applied at the same time to the double crank, exerts the whole power of the steam without any strain on the bed-plate, or any friction on the crank shaft journals. Thus the whole power of the engine is brought direct to its work, and the friction reduced to the smallest possible quantity; besides the advantage of a high motion at first speed, obviating the necessity of counter shaft and belts, with their friction. At 300 feet of piston speed, this engine

equals 28-horse power, but 40-horse power can be obtained with perfect safety and durability.

335 Marwedel & Otis, 329 Bush street, San Francisco: one show-case: Hardware and Mechanics' Tools.

This is an exceedingly neat and creditable show, including door-plates, cranks for door-gongs, numbers, and various instruments for delicate mechanical use.

357 A. Kohler, San Francisco: two cases Fancy Articles; one case Musical Instruments; one Bronze Statuette; lot Vases; two Covered Glass Jars; two Drums.

358 Kirby & Co., Santa Cruz: one Warren Hide.

360 W. G. Jones, San Francisco: lot Resin; one bottle Turpentine. California manufacture.

Both the rosin and turpentine are very superior articles, and fully demonstrate the capacity of California to produce these articles, not only for her own use, but also for exportation. They were manufactured by Mr. W. G. Jones, of Dogtown, Butte county. Mr. J. R Stewart is the agent of the manufacturer in this city.

362 W. T. Garratt, San Francisco: nine large Church Bells, with Garratt's Improved Hangings; one Ship Bell; Garratt's Patent Rose Couplings and Bands for mining purposes; Hydraulic Pipe and Nozzle; Steam Whistles; Steam Gauges; Water Gauge, with glass tube; Magnetic Gauge; Steam Globe Valves; Flange, Steam, Water and Gas Cocks; Oil Cocks and Pumps, with variety of other brass goods; samples of Garratt's Patent Anti Friction Metal.

The above entry is one of the fullest and most noticeable in the Pavilion. The large church bell which he exhibits is equal in tone and finish to any ever imported, and is the largest size which has ever been attempted on this coast. The finish and quality of work exhibited by Mr. Garratt will compare favorably with the product of any similar manufactory abroad, whether in the Atlantic States or Europe, and fully attest the capacity of our own artificers in brass to furnish everything needful in this important branch of industry at home. Mr. Garratt's globe valves are particularly noticeable for their superior style of finish, durability and safety.

386 J. P. Goodwin & Co., San Francisco Parlor Set, in plush, eight pieces.

369 Dellwig & Bro., San Francisco: one case Confectionery.

A very fine show of nice things to tempt and gratify the appetite. The bridal loaf with its emblematic pipe of peace and anchor of hope, is elegantly ornamented, and no doubt rich in the more substantial ingredients of its interior.

370 Taylor & Ireland, San Francisco: one Stove, "Fire King," California manufacture; one Stove, "Peacemaker," imported.

This stove was invented and manufactured in San Francisco. It presents a greater variety and a more perfect combination of principles than any stove ever before devised. Its chief features are corrugated oven plates, by which an increased percentage of heat is obtained over plain ones; a tubular or hollow fire grate, which admits a constant current of air, is made to pass constantly through each bar and cross-piece of the grate, thereby greatly retarding the destructive process of the heat upon the same; a caloric or hot-air chamber, into which the air that is heated by passing through the grate bars is conveyed, and from which it is conducted, by convenient arrangements, either into the oven to increase the heat for baking and roasting, or, by proper conductors, into any other part of the house, for heating rooms; or, if wanted for no other purpose, it is used as a hot air blast beneath the fire grate. There are several other points of novelty and interest connected with the economy and working of this stove, which Mr. Taylor, who is usually present in the evening, will fully and freely explain to visitors. When California goes in for anything, no matter what it is, she is always expected to distance all competitors. The invention of this stove has not suffered her to lose prestige even in so common a combination as a cooking stove.

374 Wm. Barnes & Son, 509 Broadway, San Francisco: three Canary Cages.

375 Easton Brothers, two Secretaries.

376 Rufus Howland, San Francisco: one Tree Nail Machine.

This machine is employed for turning treenails, or the wooden pins employed in ship building. This machine has been greatly improved by Mr. Howland, the exhibitor. His improvements consist in an entire change of the construction of the main parts of the machine, rendering it more compact and effective. The main improvement, however, consists in the cutter head, which is so arranged as to be much more easily and readily adjusted than any hitherto employed, and by which a treenail of any size needed in ship building may be readily turned. This machine is also calculated to run with nearly three times the speed usually employed in such machines.

379 Chas. Bernard, San Francisco: lot Coffee and Spices.

This is the celebrated "Chartres" coffee, manufactured at 707 Sansome street, San Francisco. The exhibitor shows coffee raw, roasted and ground; put up in paper for immediate use, and in tin or air-tight cans, for transportation. He also exhibits a variety of spices, ground and put up at the same establishment.

382 Atwood & Bolwell, San Francisco: one Self-Regulating Wind Mill; one Rotary Wind Mill.

Among the innumerable improvements constantly being made in every class of machinery, the windmill, old and simple as it is, is not overlooked. Scarcely a year passes away without bringing something new, either in style or principle, in connection with this cheap and universal power. The great excellence claimed for Atwood's principle of construction, as exhibited last year and again at the present exhibition, is its self-regulating arrangement, which is based upon centrifugal motion, and operates precisely the same as the ordinary regulator of a steam engine. Connected with each arm or fan is a sliding rod, running parallel therewith, and upon the end of which is an iron ball weighing four or five pounds. As the speed increases, these balls have a tendency to fly outwards, and as they do so, each ball brings the fan with which it is connected, more with its edge to the wind, thereby regulating the speed precisely to the power required. Mr. Atwood also now, for the first time, exhibits another improvement, which consists in stationary fans placed upon a revolving frame, which, when desired, is set to turn so as to always present the fans to the greatest force of the wind; when the full force of the wind is not wanted, the mill, by a simple contrivance, which may be worked by a child, and upon the ground, may be so placed as to take any desirable fraction of the force of the air current.

385 Samuel Hill, agent Florence Sewing Machines, 11 Montgomery street, San Francisco: one lot Sewing Machines.

The following are the advantages claimed for this machine by the inventor and agents: It makes four different stitches, the *lock, knot, double lock,* and *double knot* on one and the same machine, each stitch being *alike on both sides* of the fabric. Every machine has the *reversible feed motion*, which enables the operator, by simply turning a thumb-screw, to have the work run either to the right or left, to stay any part of the seam, or fasten the ends of seams, without turning the fabric. Changing the length of stitch, and from one kind of stitch to another, can readily be done while the machine is in motion. Its motions are all *positive;* there are no springs to get out of order, and its simplicity enables the most inexperienced to operate it. It does not require finer thread on the under than for the upper side, and will sew across the heaviest seams, or from one to more thicknesses of cloth, without change of needle, tension, or breaking thread. The hemmer is easily adjusted, and will turn any width of hem desired. It will hem, fell, bind, gather, braid, quilt, and gather and sew on a ruffle at the same time. With precision and accuracy the Florence draws the thread into the cloth.

386 Mrs. Cullen, Mrs. Damon and Mrs. Gale, San Francisco: samples Sewing Machine Work.

389 Ridley & Kimball, San Francisco: two Pianos; one 5 octave piano style Melodeon; one 5 octave scroll leg Melodeon; one 4½-octave Church Harmonium.

301 C. A. Fletcher, San Francisco: Boys' Suit on frame.
